

Offshore Sand and the Endangered Species Act (ESA)

Dr. William Y. Brown, Chief Environmental Officer
Bureau of Ocean Energy Management

BOEM manages development of the nation's offshore resources in an environmentally and economically responsible way.

BSEE develops and enforces safety and environmental regulations.

Both bureaus are in the Department of the Interior

Environmental Protection

**The Chief Environmental Officer
reports to the Director of BOEM and
supervises the bureau's environmental
studies and environmental
assessment divisions.**

Outer Continental Shelf Lands Act (OSCLA)

- Defines the outer continental shelf (OCS) as the area beyond state waters to 200 nautical miles offshore (or more in some cases).
- State waters end at 3 nautical miles offshore (or 9 nautical miles for Texas and the west coast of Florida)
- BOEM is authorized to lease OCS blocks for development of oil, gas, renewable energy, and non-energy minerals, subject to environmental safeguards.

- Oil and Gas Program (O&G)
- Renewable Energy Program (OREP)
- Marine Minerals Program (MMP)

Noncompetitive Sand

OCSLA generally requires competitive bidding, but there are exceptions for renewable energy and non-energy minerals. Particularly, OSCLA was amended in 1994 to provide:

“The Secretary may negotiate with any person an agreement for the use of Outer Continental Shelf sand, gravel and shell resources—

- (i) for use in a program of, or project for, shore protection, beach restoration, or coastal wetlands restoration undertaken by a Federal, State, or local government agency; or
- (ii) for use in a construction project that is funded in whole or in part by or authorized by the Federal Government.”

BOEM's Role for Sand

- Provides policy framework for the development of marine mineral resources on the OCS
- Collects and provides geologic and environmental information, developed through partnerships
- Identifies and makes available OCS sand deposits suitable for beach nourishment and wetlands restoration projects
- Conducts studies to fill in data gaps and inform environmental review

Integrating Environmental Requirements

Each NEPA analysis examines areas and environmental impacts:

- **Physical**
 - Water movement and sediment transport
 - Water quality
 - Air quality
 - Noise
- **Biological**
 - Bottom invertebrate and fish habitat
 - Fish and other organisms in the water
 - Endangered and threatened species
- **Socioeconomic**
 - Archeological and cultural resources
 - Recreation and tourism
 - Fisheries

- ESA directs all Federal agencies to protect threatened and endangered species
- BOEM, along with the US Army Corps of Engineers (USACE), consults with the National Marine Fisheries Service (NMFS) or US Fish and Wildlife Service (FWS) on all beach renourishment projects that may affect endangered or threatened species.
- NMFS and FWS jurisdiction is typically split by species
- The Loggerhead sea turtle is an exception (NMFS-swimming, FWS-nesting)
- Gulf Regional Biological Opinion (GRBO) and South Atlantic Regional Biological Opinion: <http://el.erdc.usace.army.mil/seaturtles/refs-bo.cfm>

- North Atlantic right whale (*Eubalaena glacialis*)
- Fin whale (*Balaenoptera physalus*)
- Humpback whale (*Megaptera novaeangliae*)
- West Indian manatee (*Trichechus manatus latirostris*)
- Atlantic Sturgeon (*Acipenser oxyrinchus oxyrinchus*)
- Smalltooth sawfish (*Pristis pectinata*)
- Gulf Sturgeon (*Acipenser oxyrinchus desotoi*)
- Acropora corals: Staghorn (*Acropora cervicornis*) and Elkhorn (*Acropora palmata*)
- Loggerhead sea turtle (listed population) (*Caretta caretta*)
- Kemp's ridley sea turtle (*Lepidochelys kempi*)
- Leatherback sea turtle (*Dermochelys coriacea*)
- Green sea turtle (*Chelonia mydas*)
- Hawksbill sea turtle (*Eretmochelys imbricata*)

- North Atlantic right whale

Environmental Research

- BOEM Environmental Studies Program
 - 9 ongoing programmatic studies
 - \$15.2 million spent on MMP Environmental Studies
 - Hurricane Sandy funds - \$3.1 million for Environmental Studies
- Research identifies mitigation and minimization measures information gaps warranting future research

- Concern: Current required hopper dredging windows are based on water temperature, are conservative, and may increase costs unnecessarily.
- Proposed Study: Assess the risk of turtle incidental take in OCS borrow areas to inform mitigation that minimizes take while avoiding any unnecessary time/area closures.
