

Request for Interest in Renewable Energy Leasing Offshore New Jersey

Introduction

Will Waskes

Project Coordinator for New Jersey
Office of Offshore Alternative Energy Programs
Minerals Management Service

What is an RFI?

- A Request for Interest (RFI) is a formal invitation of submissions of interest in obtaining one or more commercial leases from MMS authorizing the construction and operation of a renewable energy project on the OCS
- An RFI is published by MMS in the Federal Register

Public Comment Period

- The published RFI is accompanied by a public comment period
- The comment period is variable, but typically no less than 60 days
- Only submissions received by the comment period deadline will be considered

Purpose of the RFI

- OCSLA requires MMS to award leases competitively, unless MMS makes a determination that there is no competitive interest
- The RFI will assist MMS in determining if competitive interest exists in the described area

Determining Competitive Interest

- Once MMS has reviewed information submitted, MMS will make a determination of competitive interest
 - Geographic overlap?
 - Intertract competition

Evaluation Factors to Determine Competitive Interest

- Some factors MMS could consider:
 - Site locations
 - Timing and type of proposed activities
 - Infrastructure
 - Anticipated power production and likely purchasers
 - Environmental and resource data and information
 - Qualifications to hold an OCS lease
- Others?

RFI Elements for Task Force Consideration

- Description of the RFI Area
- Required Indication of Interest Information

Task Force members will have an opportunity to review and comment on the draft RFI prior to its publication in the Federal Register
