

The boundaries of the regular blocks are 4,800 international meters on a side and contain 2,304 hectares. The regular boundaries are defined in terms of X and Y coordinates of the Universal Transverse Mercator Grid System based on the Geodetic Reference System (GRS) 1980 Ellipsoid.

Onshore planimetric base compilation is from Alaska Department of Natural Resources, Land Records Info. Section: Alaska Coastline, 1:63,360, ED 1.0 1998; with Rivers, and Bays added from 1:250,000 DNR coastline file.

National Wildlife Refuge boundaries were obtained from <http://alaska.fws.gov/aba/tm/GIS/refuge.htm>.

The (solid) Submerged Lands Act Boundary and Limit of 8(g) Zone lines depicted hereon reflect the official federal position for Submerged Lands Act and OCS Lands Act purposes. The areas of the fractional blocks abutting these lines have been determined and are as depicted on the Supplemental Official OCS Block Diagrams (SOBDs). Consult the SOBDs for official descriptions and approval dates. However, Supplemental Official OCS Block Diagrams have not been published for blocks adjoining the approximate (long dashed) Submerged Lands Act Boundary and the Limit of 8(g) Zone. Coordinates and areal measurements for these blocks are not considered by the MMS to reflect an official Federal Position.

Areas and dimensions of the irregular blocks along the zone boundary are as indicated.

Copies of these diagrams and other information may be obtained at the appropriate MMS OCS Region or from www.mms.gov/ld/maps.htm.
