

# Section 106 of the National Historic Preservation Act

## What is the Area of Potential Effects (APE) for the Revolution Wind Project?

BOEM has delineated three APEs:

**1. Terrestrial:** Export cable landing site, underground cable routes onshore, substation and interconnection facility locations

**2. Marine:** Seafloor wind turbine and substation locations, inter-array and link cables, and export cable routing to shore

**3. Visual for Aboveground Historic Properties:** Views between historic properties and project structures, both onshore and offshore

BOEM selected key observation points (KOPs) at locations with representative views of the Project and in the visual APE for historic properties that have the potential for visual adverse effects.
