

Sunrise Wind Offshore Wind Farm

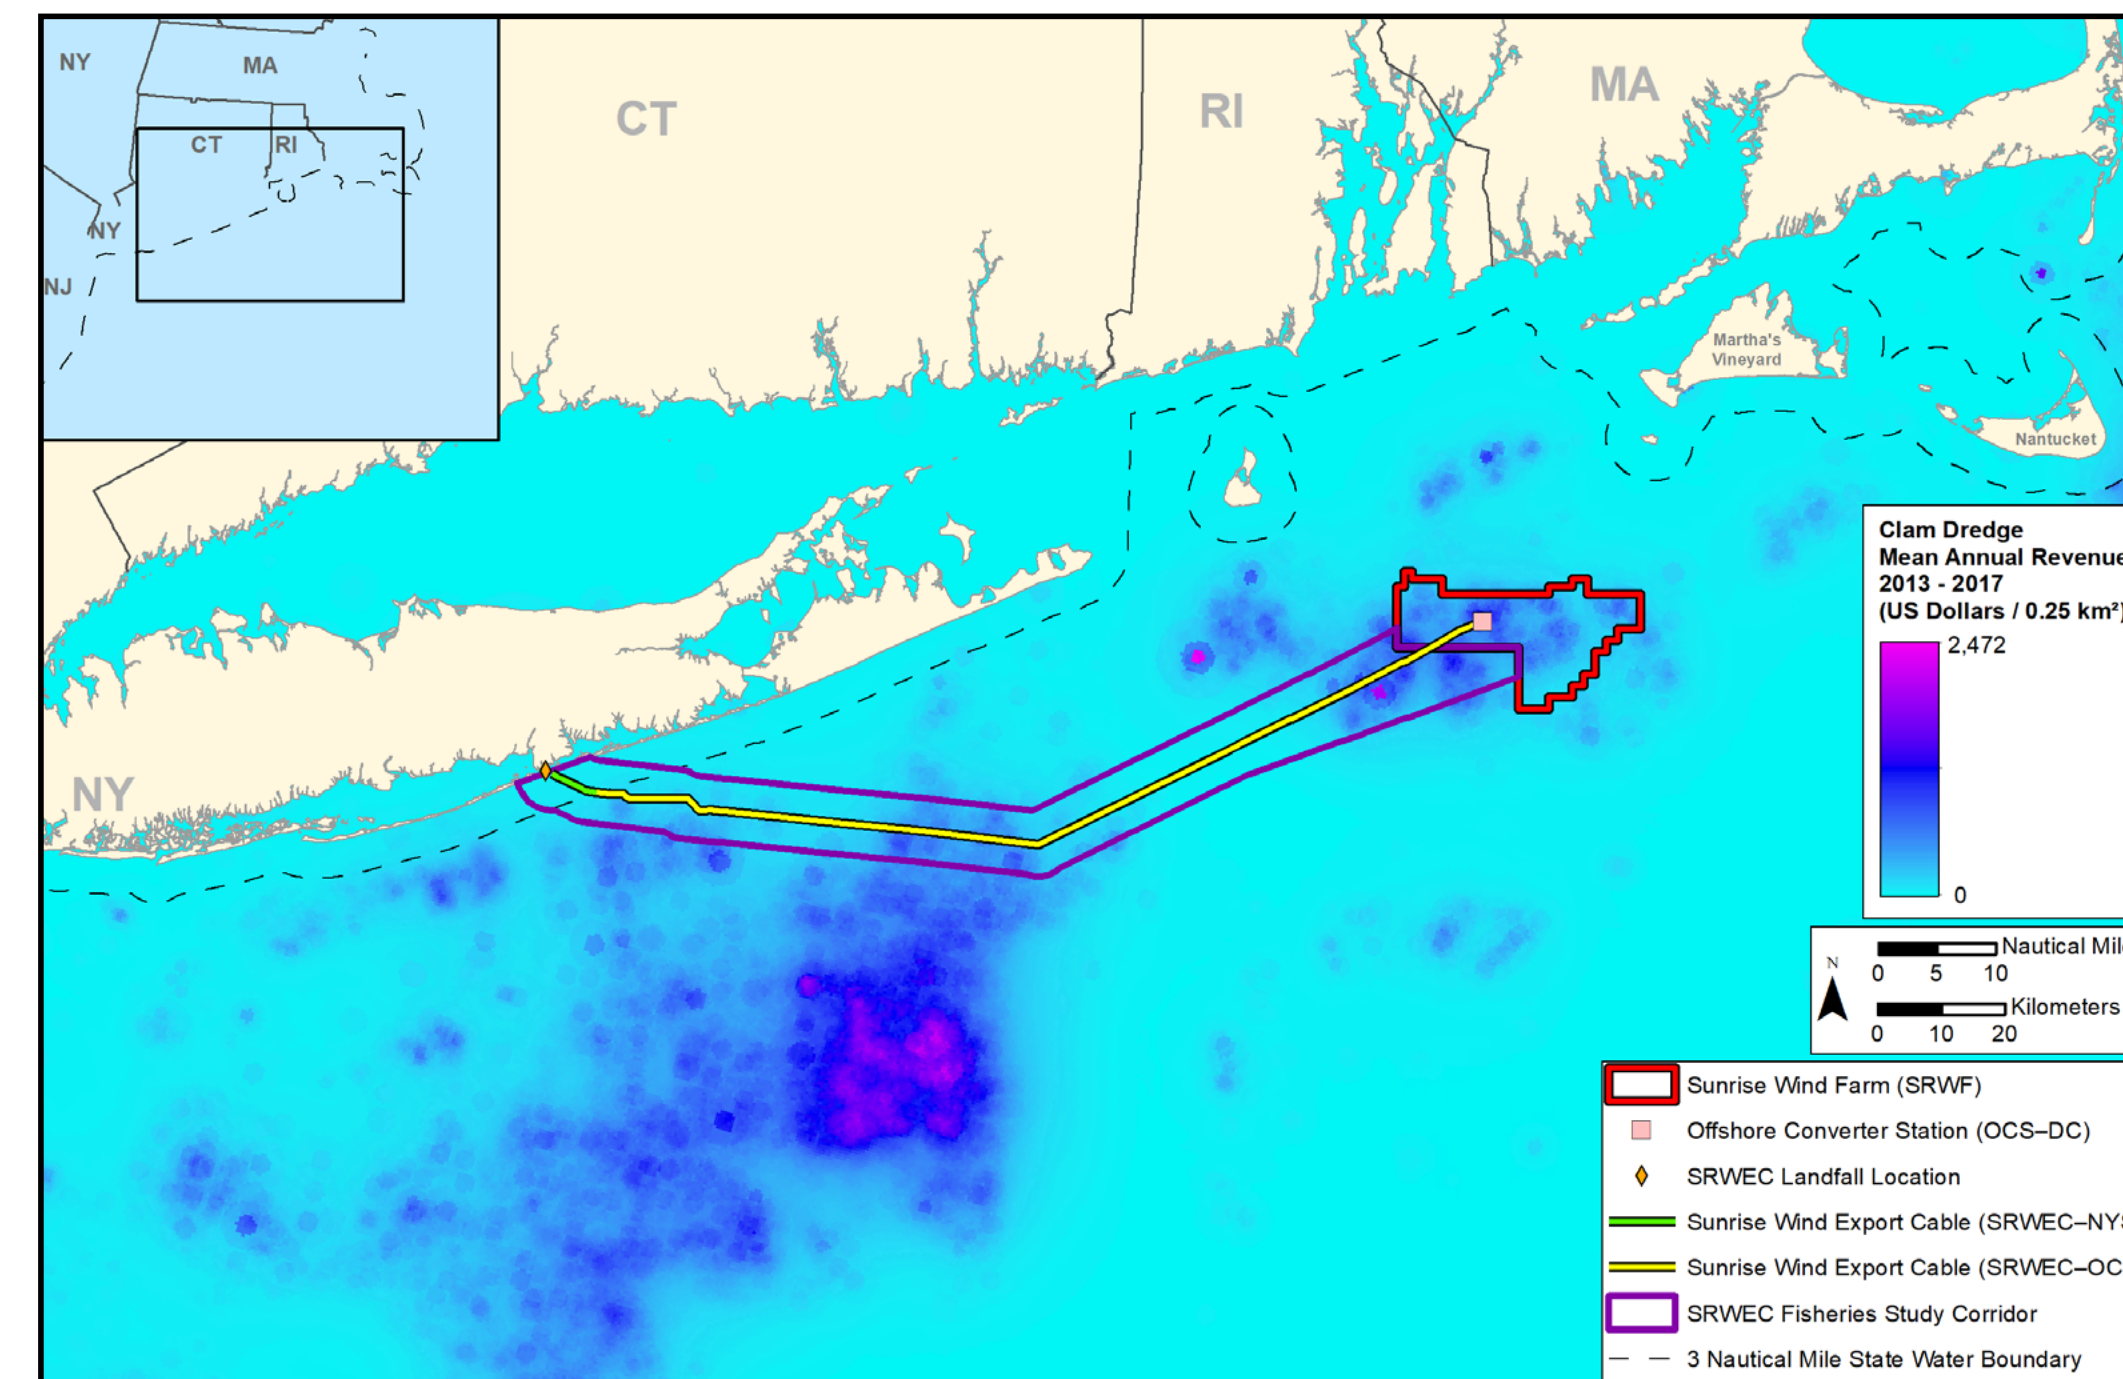

# Potential Impacts to Commercial Fishing

## Construction

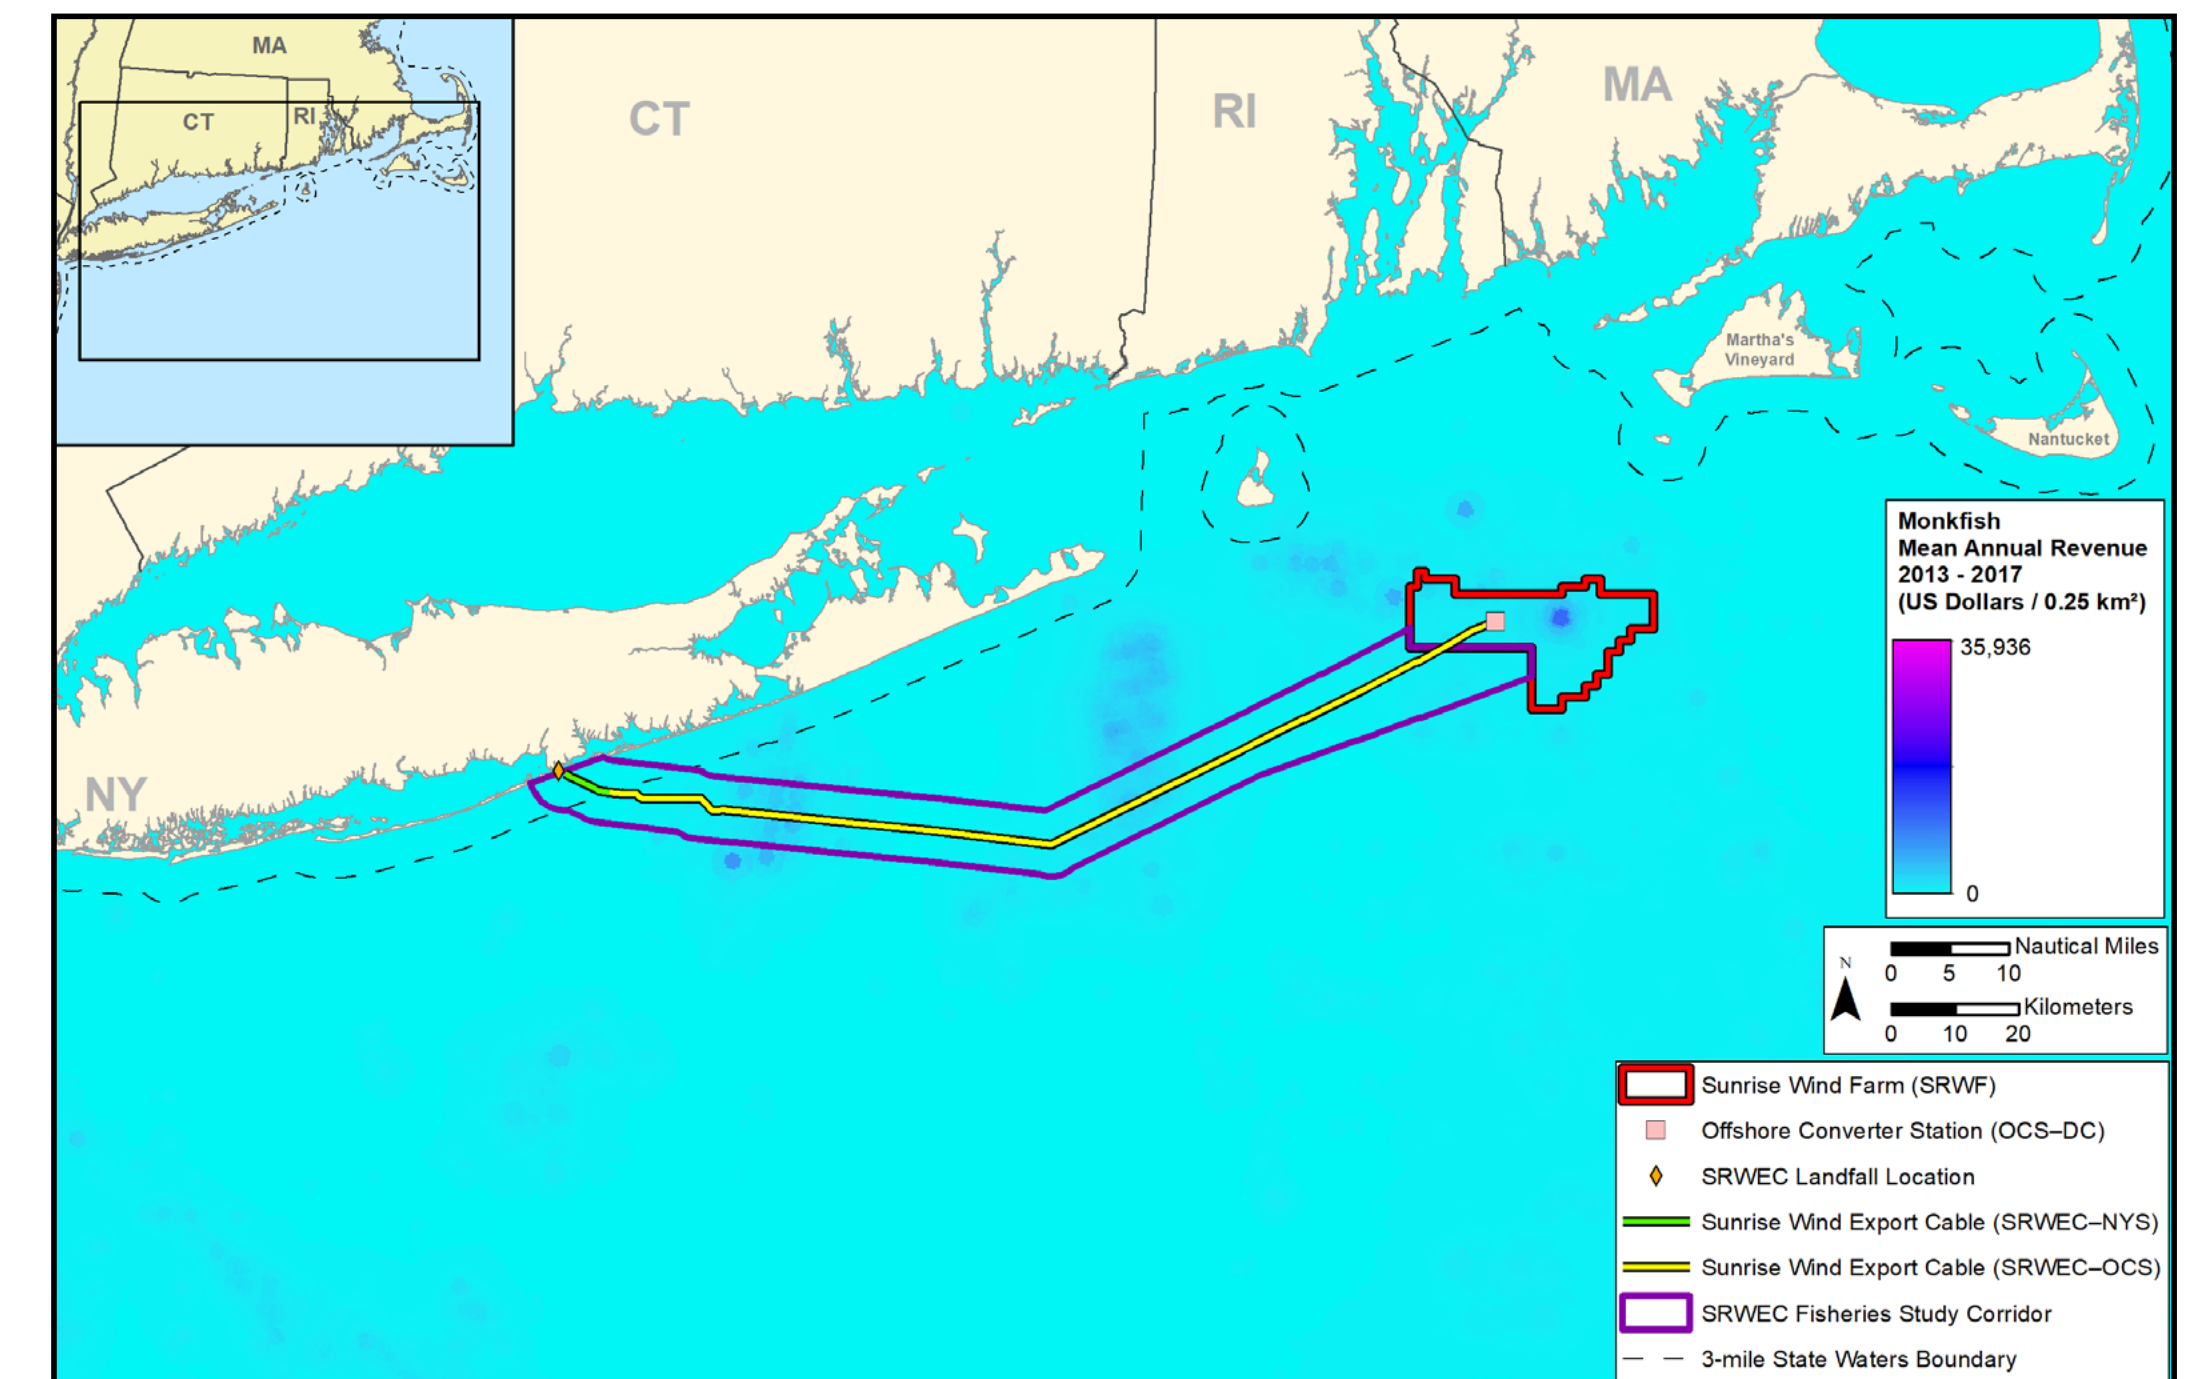

- Displacement of fishing vessels during Installation of WTGs/OCS-DS and during cable laying
- Increased vessel traffic in ports and within offshore work areas

Bottom Trawl Mean Annual Revenue 2013-2017

Clam Dredge Mean Annual Revenue 2013-2017

Monkfish Mean Annual Revenue 2013-2017

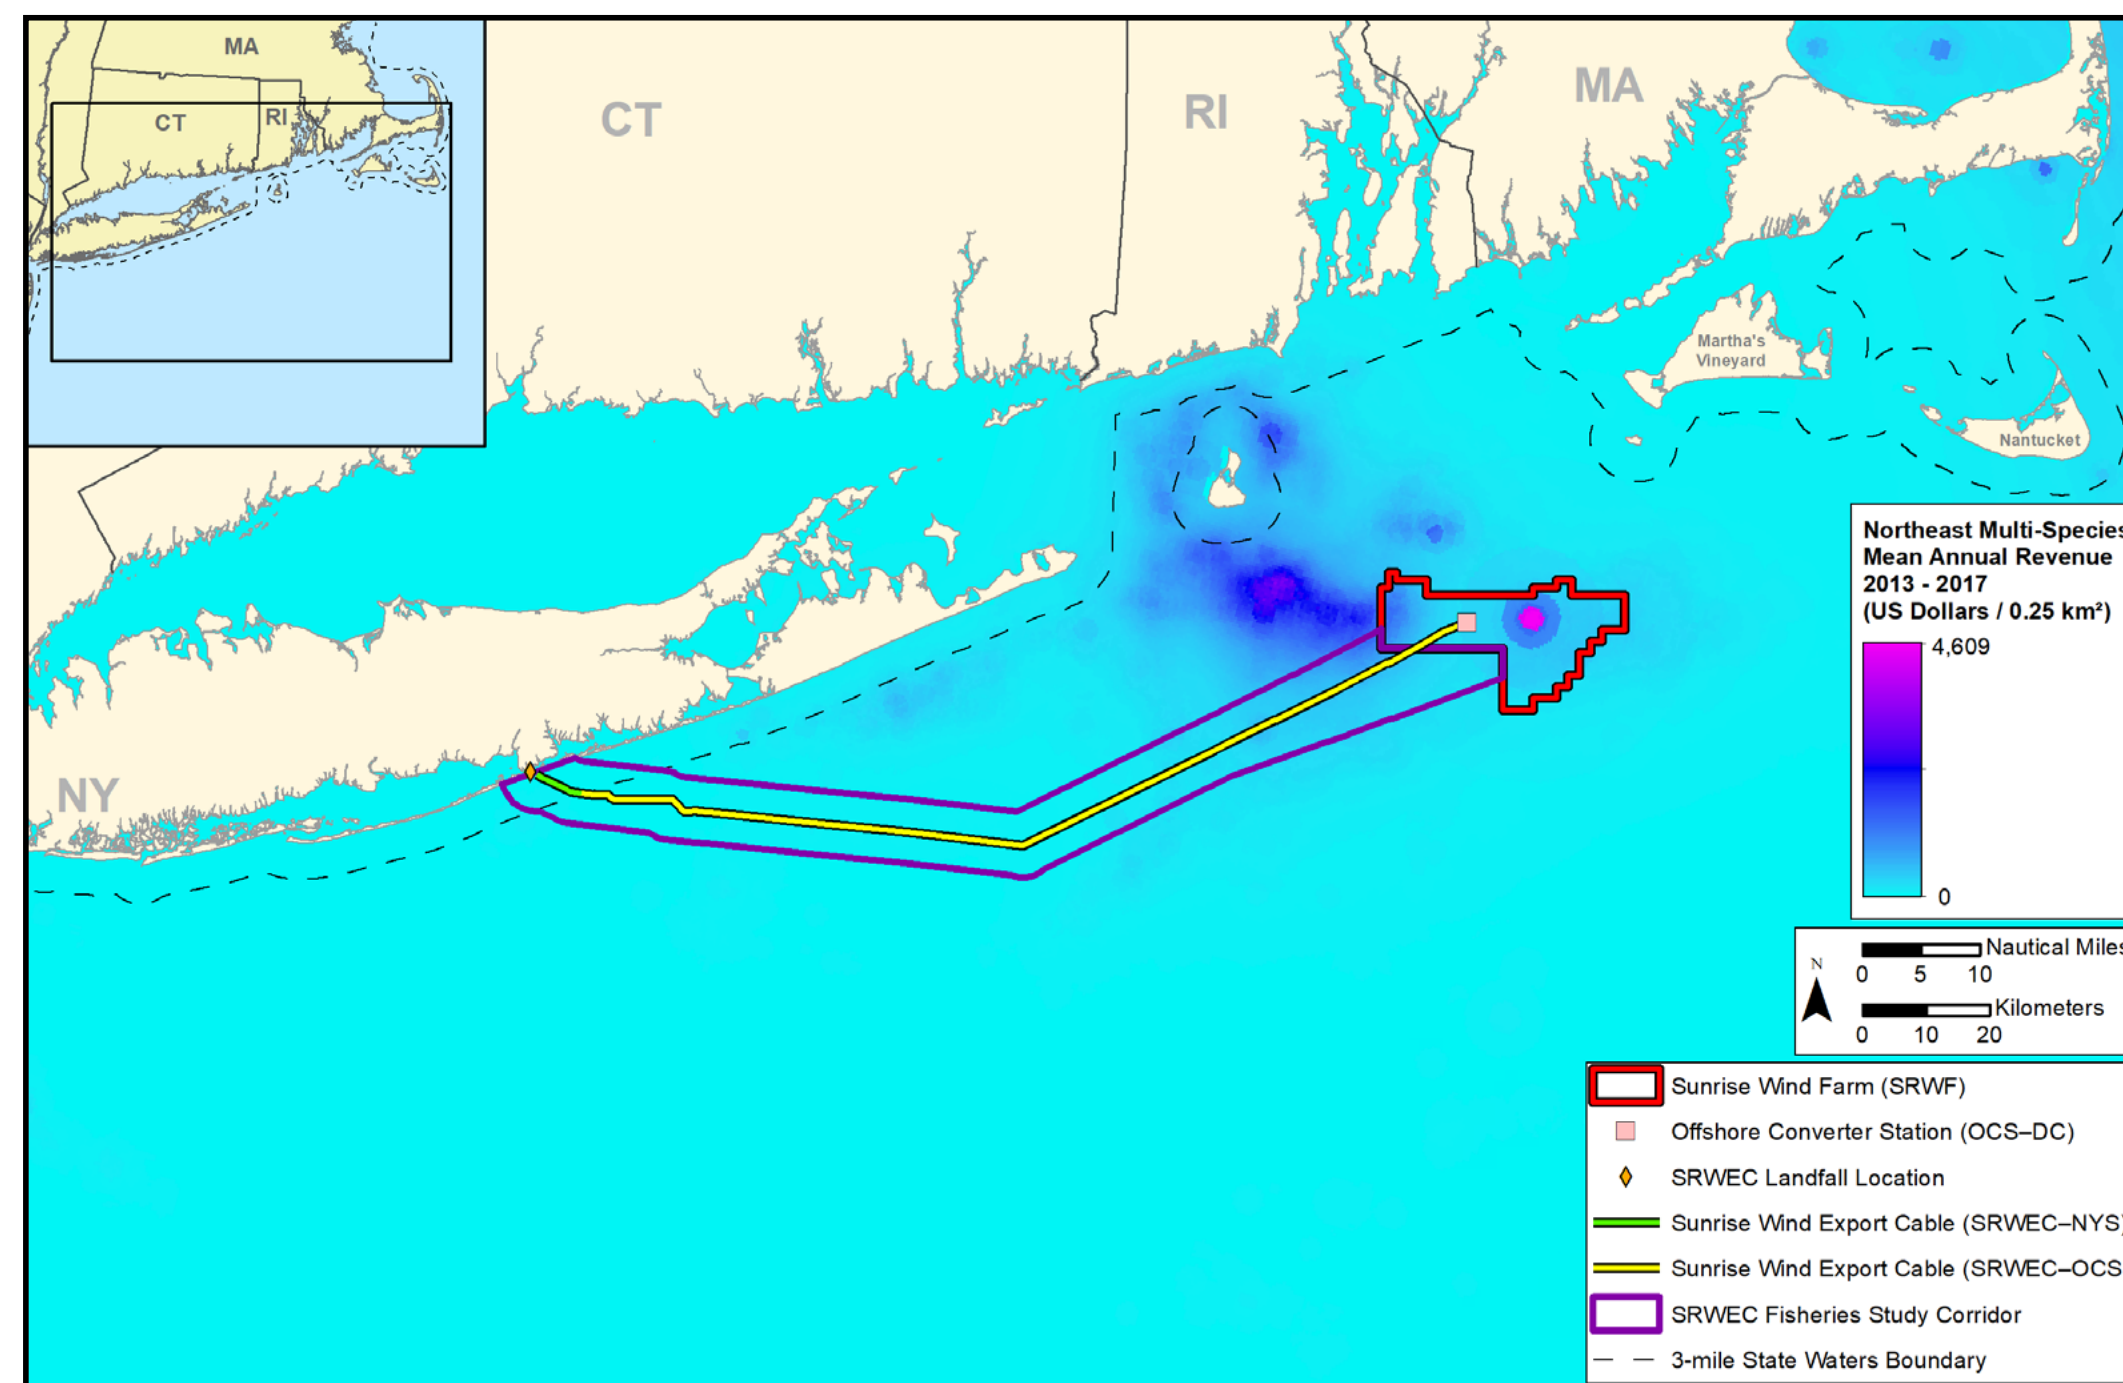

## Sunrise Wind Offshore Wind Farm

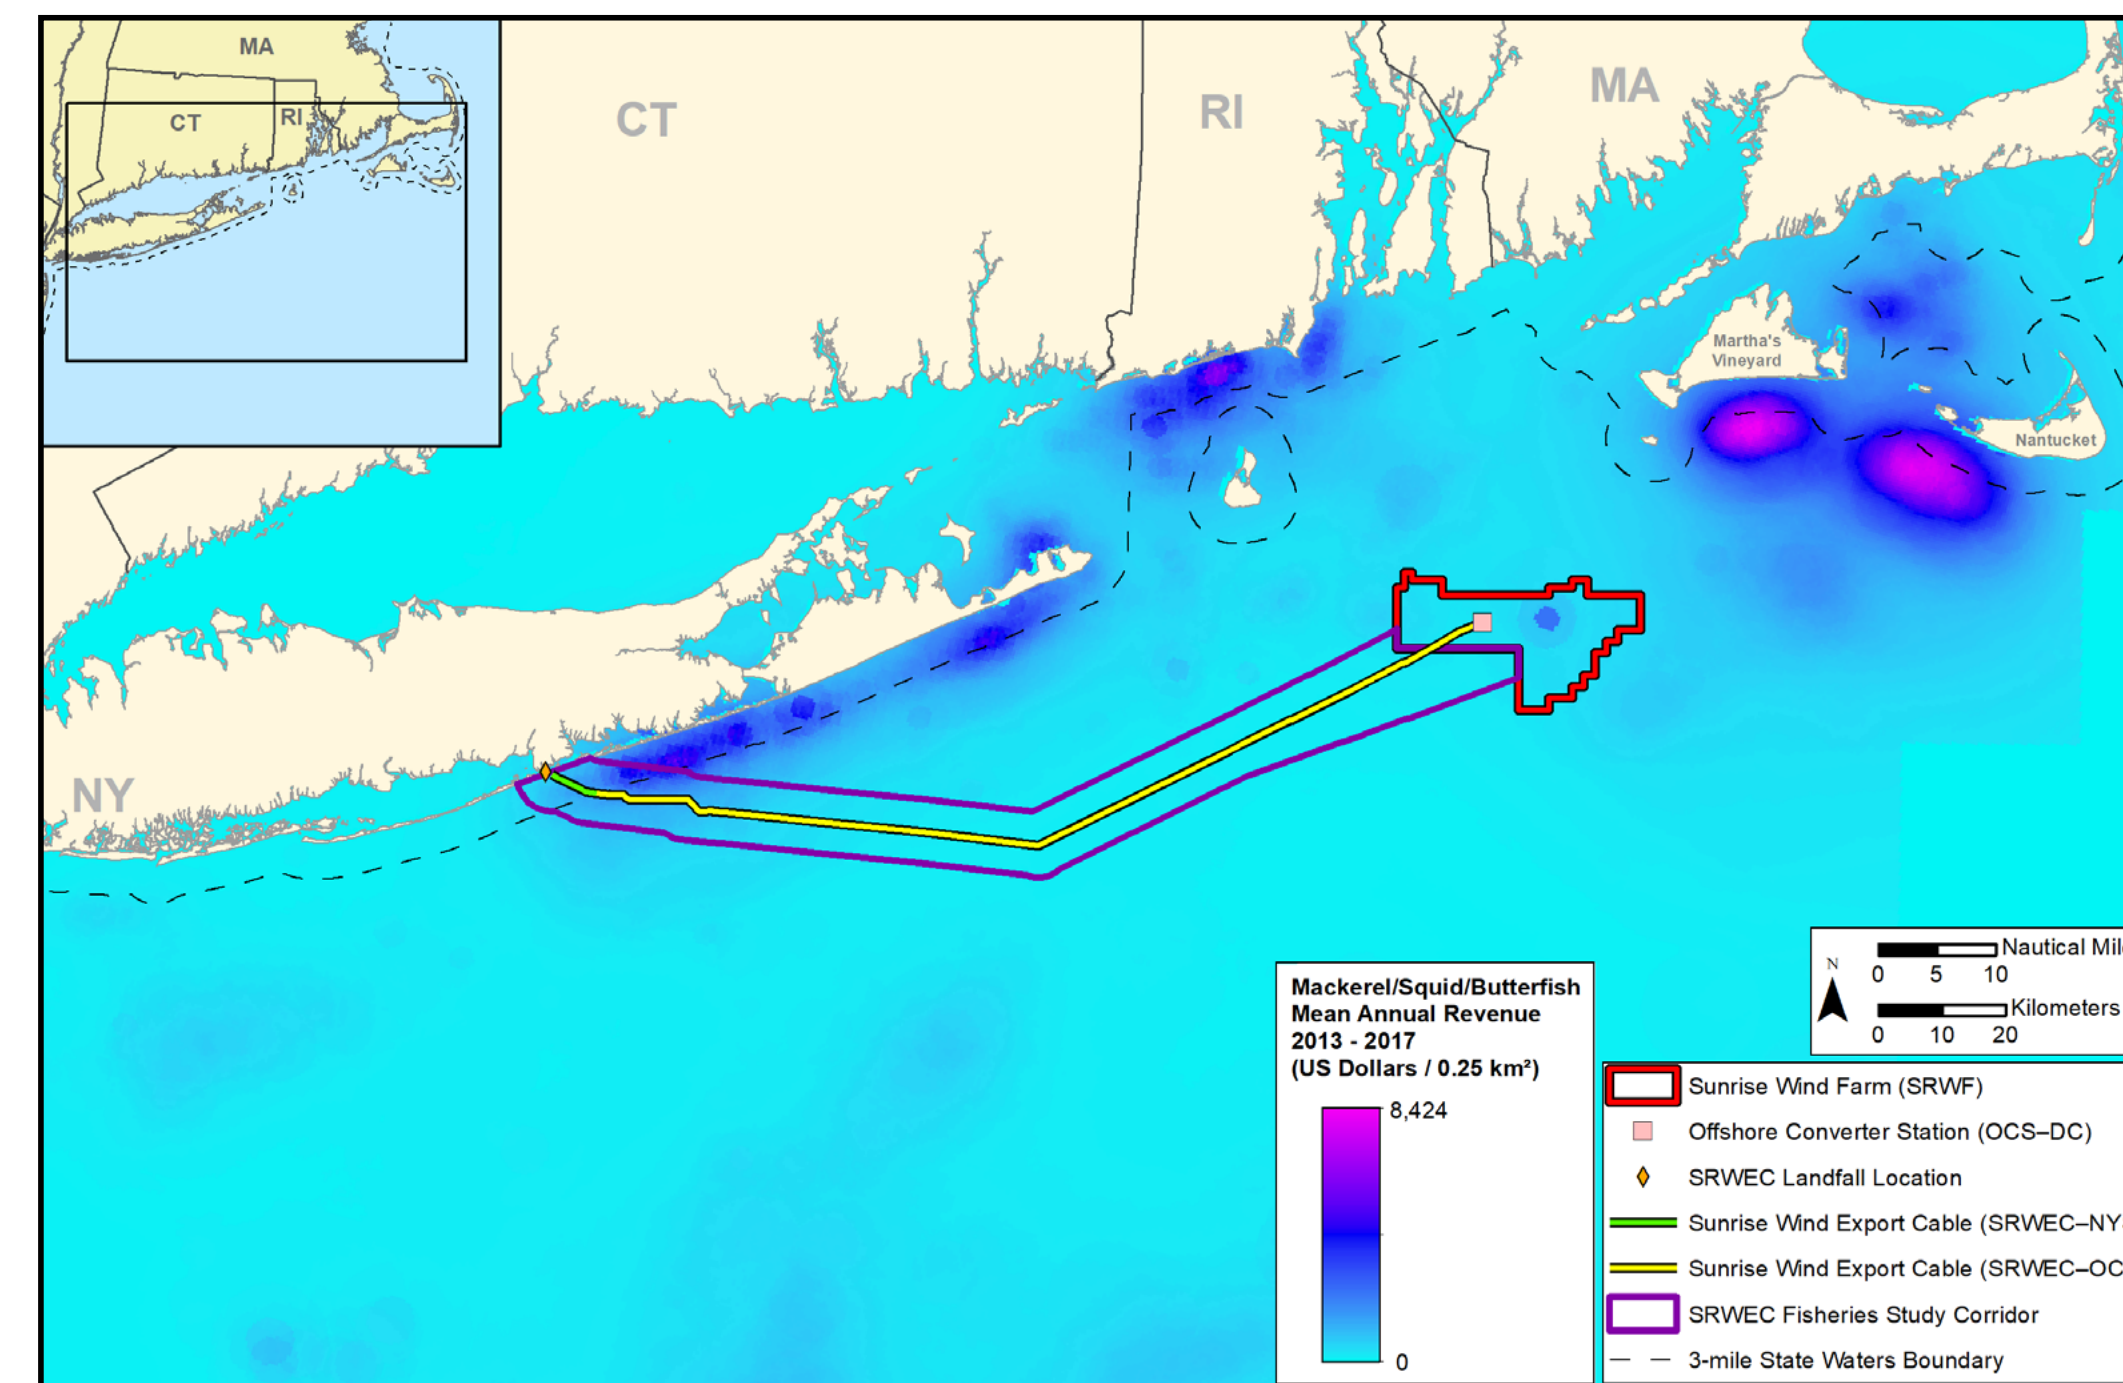

### Operations

The long-term presence of Offshore Wind structures in the Lease Area could result in:

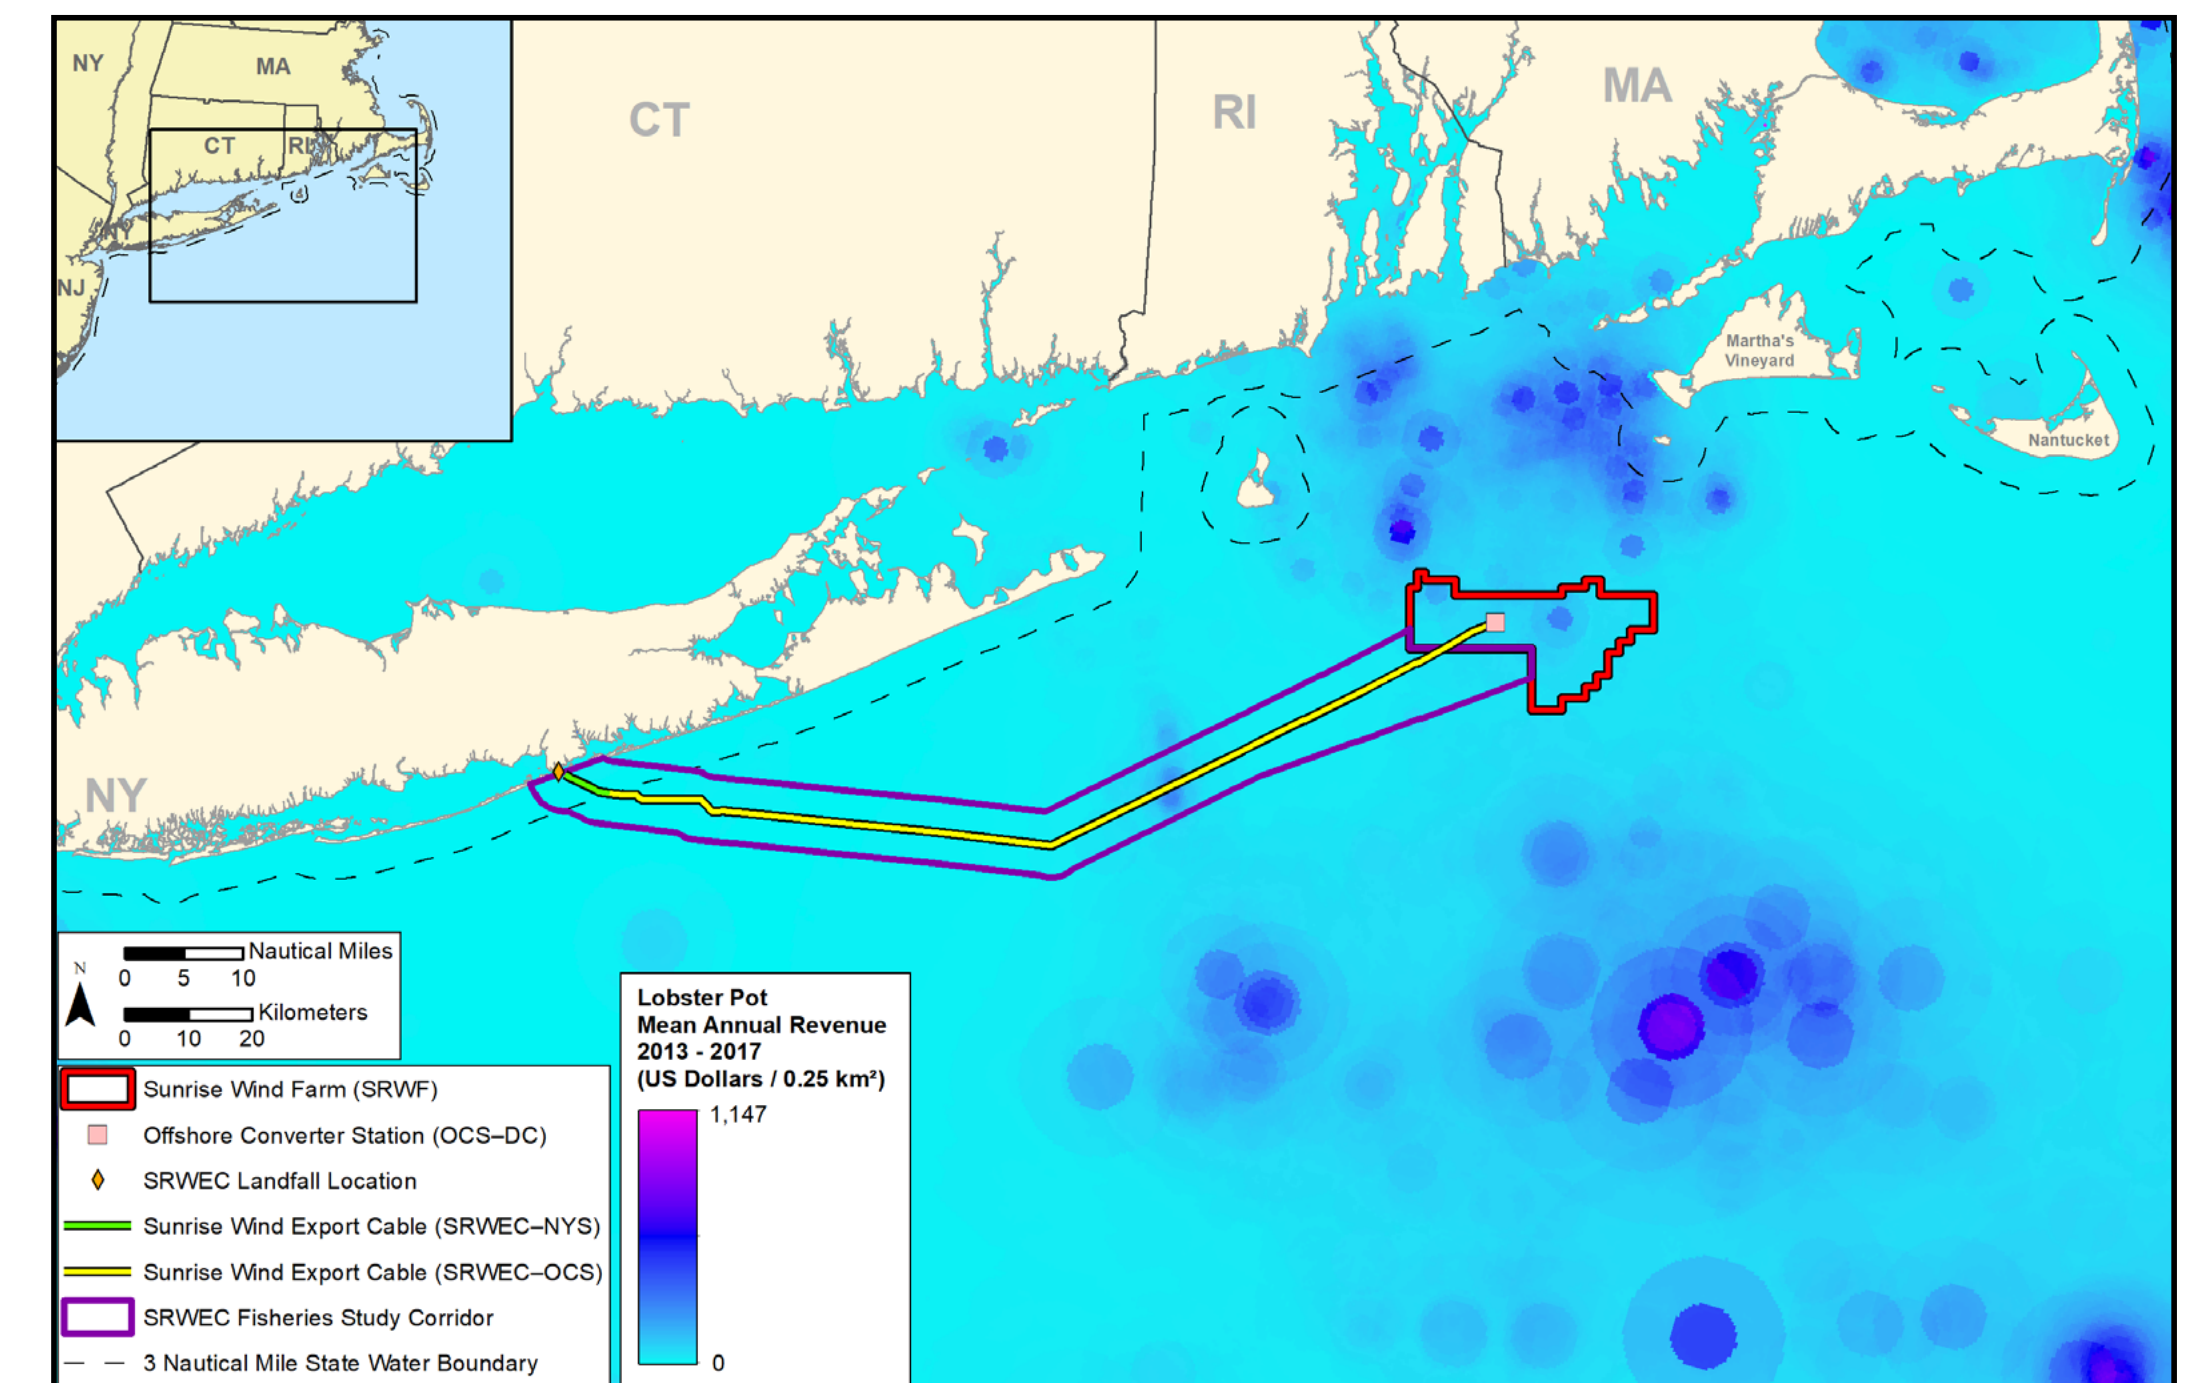

- Long-term space use of conflicts for fishing and transiting within the Lease Area
- Increased risk of allision or collision for fishing vessels in the Lease Area
- Habitat modification in the Lease Area and along submarine export cable corridors
- Artificial reef effect may increase density of structure-oriented fish
- Potential for gear entanglement and loss due to interactions with exposed cables

**Northeast Multi-Species Mean Annual Revenue 2013-2017**

**Mackerel/Squid/Butterfish Mean Annual Revenue 2013-2017**

**Lobster Pot Mean Annual Revenue 2013-2017**
