

Leading Light Wind

Leading Light Wind has been awarded an offshore wind lease in the New York Bight through the Bureau of Ocean Energy Management leasing process. Led by experienced, global renewable energy developer Invenergy and co-sponsor, New York-based energyRe, development of the project will advance the clean energy transition across the region. Leading Light Wind is targeted for operation in 2030.

Leading Light Wind brings **equitable economic development** and **job creation** to the region, all while generating and delivering clean energy to meet the nation's ambitious climate goals. The project has the potential to generate 2,000 megawatts or more of clean, renewable energy – a critical step in meeting **New York and New Jersey's clean energy goals** of procuring 9,000 megawatts and 7,500 megawatts of offshore wind energy, respectively.

Leading Light Wind Lease Location

Benefits to the Region

2,000 MW+ of clean, renewable energy

Enough electricity to power **650,000+** American homes

Targeted local workforce training and investment to disadvantaged communities

Collaborative engagement with local communities, fisheries, labor, and Native American Tribes.

About Leading Light Wind

Leading Light Wind is an American-led offshore wind project in the New York Bight. Invenergy serves as the lead project developer, and energyRe the project co-sponsor. Additional key project partners include Blackstone Infrastructure Partners, CDPQ, FirstLight Power, and Ullico Infrastructure Fund, who will provide funding for the project. This unique partnership represents decades of renewable and energy infrastructure expertise as well as a long-standing local presence in the tri-state region.

Invenergy and its partners take pride in being responsible developers, stewards of the environment, and trusted community partners.
