

**Appendix V – Environmental Justice Supplementary Material**

## Appendix V, Environmental Justice Supplementary Material

### 1. Introduction

This appendix provides an overview of the racial and ethnic characteristics as well as the poverty rates in the Oyster Creek and BL England study areas for the Ocean Wind Offshore Wind Farm Project (Project). Data was obtained from the U.S. Census American Community Survey File # B17017 and File # B03002 - 2020 5-Year Estimates Detailed Tables data, revised on March 17, 2022. The study area and methodology used to identify environmental justice populations and to evaluate impacts are described in Section 2.3.2 of the COP, Volume II. This appendix also provides the full EJScreen 2.0 report that is described in Section 2.3.2 of the COP, Volume II.

### 2. Racial and ethnic characteristics in the study areas

**Table 2-1** provides an overview of the racial and ethnic characteristics of the population in the census tracts within the study areas in Atlantic, Ocean, and Cape May Counties. For the Oyster Creek study area, the minority threshold is 10 percentage points higher than the county average of 12.6 percent, or 22.6 percent. In the Oyster Creek study area, the minority population in two block groups is higher than the county average; however, neither of these two block groups exceed the minority threshold. For the BL England Study area, in Cape May County, the minority threshold is 10 percentage points higher than the county average of 10.3 percent, or 20.3 percent. Two block groups in the BL England study area have a minority population higher than the county average, but only one block group exceeds the minority threshold. This block group is Block Group 4, Census Tract 201.01, which has a minority population of 41.5 percent. The BL England study area overlaps a small portion of Atlantic County that is not populated. Block groups with a minority population that exceeds the average rate for the county are indicated in bold in **Table 2-1**.

**Table 2-1 - Racial and ethnic characteristics in the Oyster Creek and BL England study areas (block groups that exceed the county level minority average are shown in bold).**

Source: U.S. Census 2016-2020 ACS 5-Year Estimates

The U.S. Census (2018) uses the following definitions to define race categories:

- White. A person having origins in any of the original peoples of Europe, the Middle East, or North Africa. It includes people who indicate their race as "White" or report entries such as Irish, German, Italian, Lebanese, Arab, Moroccan, or Caucasian.

- Black or African American. A person having origins in any of the Black racial groups of Africa. It includes people who indicate their race as "Black or African American," or report entries such as African American, Kenyan, Nigerian, or Haitian.
- American Indian and Alaska Native. A person having origins in any of the original peoples of North and South America (including Central America) and who maintains tribal affiliation or community attachment. This category includes people who indicate their race as "American Indian or Alaska Native" or report entries such as Navajo, Blackfeet, Inupiat, Yup'ik, or Central American Indian groups or South American Indian groups.
- Asian. A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam. This includes people who reported detailed Asian responses such as: "Asian Indian," "Chinese," "Filipino," "Korean," "Japanese," "Vietnamese," and "Other Asian" or provide other detailed Asian responses.
- Native Hawaiian and Other Pacific Islander. A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands. It includes people who reported their race as "Fijian," "Guamanian or Chamorro," "Marshallese," "Native Hawaiian," "Samoan," "Tongan," and "Other Pacific Islander" or provide other detailed Pacific Islander responses.
- Two or more races. People may choose to provide two or more races either by checking two or more race response check boxes, by providing multiple responses, or by some combination of check boxes and other responses. For data product purposes, "Two or More Races" refers to combinations of two or more of the following race categories: "White," "Black or African American," American Indian or Alaska Native," "Asian," Native Hawaiian or Other Pacific Islander," or "Some Other Race."

### 3. Poverty rates in the study areas

**Table 3-1** provides an overview of the households with incomes below the poverty line in the block groups in Ocean, Atlantic, and Cape May Counties that are within the Oyster Creek and BL England study areas. The BL England study area overlaps a small portion of Atlantic County that is not populated. In Ocean County, three block groups in the Oyster Creek study area have poverty rates that exceed the county rate of 8.6 percent. In Cape May County, three block groups in the BL England study area have a poverty rate higher than the county average of 9.5 percent. The block groups that exceed the county level poverty rate are indicated in bold in **Table 3-1**.

**Table 3-1 - Poverty rates in the Oyster Creek and BL England study areas (block groups that exceed the county level poverty rate are shown in bold).**

EJ Index for Wastewater Discharge	N/A	N/A	N/A

This report shows the values for environmental and demographic indicators and EJSCREEN indexes. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSCREEN documentation for discussion of these issues before using reports.

\*Diesel particular matter, air toxics cancer risk, and air toxics respiratory hazard index are from the EPA's 2017 Air Toxics Data Update, which is the Agency's ongoing, comprehensive evaluation of air toxics in the United States. This effort aims to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that the air toxics data presented here provide broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. Cancer risks and hazard indices from the Air Toxics Data Update are reported to one significant figure and any additional significant figures here are due to rounding. More information on the Air Toxics Data Update can be found at: <https://www.epa.gov/haps/air-toxics-data-update>.

For additional information, see: [www.epa.gov/environmentaljustice](http://www.epa.gov/environmentaljustice)

EJScreen is a screening tool for pre-decisional use only. It can help identify areas that may warrant additional consideration, analysis, or outreach. It does not provide a basis for decision-making, but it may help identify potential areas of EJ concern. Users should keep in mind that screening tools are subject to substantial uncertainty in their demographic and environmental data, particularly when looking at small geographic areas. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJScreen documentation for discussion of these issues before using reports. This screening tool does not provide data on every environmental impact and demographic factor that may be relevant to a particular location. EJScreen outputs should be supplemented with additional information and local knowledge before taking any action to address potential EJ concerns.
