## Executive Summary

Red Hook Container Terminal LLC contracted with AECOM Technical Services, Inc. (AECOM) to perform a Phase I Environmental Site Assessment (ESA) of a portion of the property identified as the South Brooklyn Marine Terminal (SBMT) located along Second Avenue between 33<sup>rd</sup> and 39<sup>th</sup> Streets, Brooklyn, Kings County, New York (subject property). This assessment was conducted as part of the potential commercial redevelopment of the subject property. This Phase I ESA was performed in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard Practice Designation E 1527-13 for ESAs. Exceptions to, or deletions from, this practice are described in this report.

The subject property is approximately 88 acres and is mostly covered in asphalt pavement, remnants of demolished buildings, multiple railroad sidings, and several areas of chain link fencing that were used as part of the previous operations. There is a security guard stationed at all times at the entrance located on 39<sup>th</sup> Street. The buildings located on the property consist of the J1 Shed, J2 Shed, N Shed, Graffiti Building, temporary structures at 650 2nd Avenue, and the Tower Building at 632 2nd Avenue. The combined area of the three sheds, Graffiti Building, and Tower Buildings is 370,580 square feet. The combined area of the two temporary structures is approximately 8,000 square feet. No visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields was observed on the subject property. However, evidence of a suspect underground storage tank (fill cap) was observed in the area of two temporary structures located in the southeastern portion of the property.

The subject property is bordered to the northwest by the Gowanus Bay and to the northeast by Sims Municipal Recycling Facility; to the east by automotive parking spaces for the Industry City employees and customers and Second Avenue, beyond which are the commercial properties known as Industry City; to the south by the intersection of Second Avenue and 39<sup>th</sup> Avenue, beyond which are automotive parking spaces along 39<sup>th</sup> Avenue and additional commercial properties (some mostly vacant or under reconstruction) also associated with Industry City; and to the west by the Gowanus Bay. AECOM did not observe any gasoline service stations or dry cleaners in the immediate vicinity (500 feet) of the subject property. Based on AECOM's site reconnaissance of the surrounding neighborhood, no off-site sources of concern were identified.

Historical research indicates that the subject property was primarily open water in 1888 and since that time the subject property has been progressively filled in and therefore is largely man-made. Only the southern-most portion of the subject property along 39<sup>th</sup> Street and Second Avenue was developed with a pier as the New York & Brooklyn Ferry & Steam Transportation Company. By 1922, the subject property had been developed into a series of piers identified as the City of New York Piers. Multiple buildings were present between these piers and Second Avenue. By 1940, four 160,000-gallon bulk storage tanks were present where the current N Shed is located and operated by the New York City Transit System, with a diesel fuel filling station located southeast of these tanks. Buildings located at the subject property were primarily used for storage and transport operations during this time period (the 39<sup>th</sup> Street Pier building, the 35<sup>th</sup> Street Pier building, and the building located between 35<sup>th</sup> and 36<sup>th</sup> Streets). By 1953, the four bulk diesel fuel storage tanks had been replaced by the current N Shed. In 1961, aerial photographs show extensive construction on the 39<sup>th</sup> Street Pier as it is extended further out into New York Harbor into its current configuration. By 1965, the J1 and J2 Sheds were present, but are connected with a structure parallel to the Gowanus Bay on the pier, giving the entire building a J" configuration (hereinafter identified as the J Shed). Rail spurs from the New York City Transit System Freight Department were still present, but the trolley service was no longer present. In addition, a lift truck garage was present which remains and is identified as the Tower Building. By 1974, significant changes had taken place to the subject property. The Tower Building remained, the J Shed and N Shed were present, but most of the earlier buildings were no longer present and had been replaced by asphalt pavement for the storage of cargo containers and motor vehicles. The current Graffiti Building located near the N Shed was present. The only remaining building was an unidentified structure near Second

Avenue located east of the Tower Building. In addition, the Scale House, which still remains present at the subject property, was located at the subject property. The 33<sup>rd</sup> Street and 35<sup>th</sup> Street were replaced with urban fill to create a large asphalt paved pier with two operating cranes to remove cargo containers from docked ships. The 35<sup>th</sup> Street Pier remains at the subject property as a pier shed. By 1995, the 33<sup>rd</sup> Street Pier was reportedly in a state of disrepair and it was removed by 2006. Between 2009 and 2011 a section of the J Shed that parallels the edge of Pier 39 had been removed; thus creating two separate buildings currently known as the J1 and J2 Sheds.

The subject property is identified on the NY Spills, Resource Conservation and Recovery Act (RCRA) Non-Generators (NonGen)/No Longer Regulated (NLR), MANIFEST, Facility Index System (FINDS), Enforcement and Compliance History Online (ECHO), Underground Storage Tanks (UST), and RCRA Corrective Action Sites (CORRACTS) databases reviewed for this assessment. Seven spills were reported for the subject property, all of which have been closed. One facility (South Brooklyn Marine Terminal) was identified at the foot of 39th Street and 1st Avenue, and was listed on the UST database in association with the removal of five 4,000-gallon diesel steel/carbon steel USTs, two 550-gallon gasoline steel/carbon steel USTs, and one 550-gallon used oil steel/carbon steel UST. The USTs were removed in 1998. The locations of these USTs and the dates of when they were installed were not available. The remainder of the listings was associated with the former generation of hazardous wastes.

According to the environmental database report, numerous (over 400) sites were identified within their respective ASTM and/or EDR search distances from the subject property. Based on AECOM's review of the remaining database listings, none of these sites are expected to present a REC to the subject property based on their distance from the subject property, regulatory status (i.e. closed, no violations found), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient). The following recognized environmental concerns (RECs) were identified in connection with the subject property:

- Due to the history of the subject property, the potential for orphan USTs and historic urban fill used to create the majority of the subject property including several of the current piers, the possibility exists for subsurface contamination on and in immediate vicinity of the subject property related to the potential USTs and historic urban fill.
- According to historical research conducted by AECOM, four, 160,000 gallon aboveground bulk storage tanks were located in the area of the current N Shed between 1940 and 1953. Information concerning the decommissioning of these tanks and the removal of any impacted soil resulting from the operation of these tanks was not available. Therefore, the historic operation of these four tanks is considered an REC.
- A brass cap was observed imbedded within a concrete pad surface in the rear of the two temporary structures. Based upon AECOM's professional judgement, the presence of the brass cap and the concrete pad suggests the possible presence or former presence of an underground storage tank or other structure. Although there is no staining or other visible evidence of a release of any kind, the brass cap and possible underground tank is considered a REC for the subject property.
- An abandoned transformer labeled as containing PCB fluids was present along the northern portion of the Tower Building in an area that was gated and inaccessible. Staining was observed in the vicinity of this abandoned transformer (approximately 15 square-feet); however, AECOM was unable to determine if the staining was water or transformer oil. Until a detailed inspection and evaluation can be made, this staining is considered a REC at the subject property based on the labeling of the transformer as containing PCBs and the existence of the stain.
- Based on AECOM's professional judgement, observations made at the subject property and historical information suggest the possible presence of a Vapor Encroachment Condition (VEC). Although there are currently no structures on the property, the REC listed herein has the potential

to include open vapor intrusion exposure pathways during future development or construction at the property. This potential VEC is considered a REC.

The following historic RECs (HRECs) were identified in connection with the subject property:

- USTs were removed from the subject property in March 1999 (location not identified) when impacted soils around the tanks and pumps were encountered. The spill was closed in April 2015.
- The subject property was identified in the database with four spill numbers (0714187, 9714188, 9714189, 9714190) related to unknown petroleum in the soil. All four spill numbers were issued on March 20, 1998 and closed on January 14, 2015.

Based on the above-described activities, no controlled RECs (CRECs) were identified in connection with the subject property.

- Areas of de minimis soil staining (approximately 5 feet by 10 feet) were present throughout the subject property. The majority of the sources of these minor leaks could not be identified due to the age and use of the subject property, but are likely related to motor fuels and hydraulic fluid and poor housekeeping practices observed.
- A leaking hydraulic trash compactor was observed located along the southern wall of the larger temporary structure which contained de minimis staining (approximately three square feet).

## 1. Introduction

### 1.1 Purpose

This Phase I Environmental Site Assessment (ESA) was performed pursuant to AECOM's written proposal, dated November 8, 2017. This assessment was conducted per the request of Red Hook Container Terminal LLC (Red Hook) as part of the proposed commercial redevelopment activities associated with the subject property. The purpose of this Phase I ESA is to provide Red Hook with information for use in evaluating recognized environmental conditions (RECs) associated with the subject property.

Per the ASTM standard, potential findings can include RECs, including historical RECs (HRECs), controlled RECs (CRECs), and de minimis conditions (DMCs). A REC is defined by the ASTM standard as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.” The term includes hazardous substances or petroleum products even under conditions in compliance with laws. HRECs are a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. CRECs are a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. DMCs are those situations that do not present a material risk of harm to public health or the environment and generally would not be subject to enforcement action if brought to the attention of the regulating authority.

This assessment is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the subject property and adjacent properties.

### 1.2 Scope of Work

The Phase I ESA included a site visit, regulatory research, historical review, and a review and an environmental database analysis of the subject property. In conducting the Phase I ESA, AECOM assessed the subject property for visible signs of possible contamination, researched public records for the subject property and adjacent properties (as applicable), and conducted interviews with persons knowledgeable about the subject property.

This project was performed in general accordance with ASTM Standard Practice Designation E 1527-13 and AECOM's proposal, dated November 8, 2017. Conclusions reached in this report are based upon the assessment performed and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

### 1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of conditions materially affecting the subject facility and/or property within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual

observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the subject property. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the subject property.

As specified in the ASTM standard (referred to below as "this practice"), it is incumbent the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- Uncertainty Not Eliminated - No ESA can wholly eliminate uncertainty regarding the potential for REC in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for REC in connection with a property, and this practice recognizes reasonable limits of time and costs. (Section 4.5.1 of the ASTM standard)
- Not Exhaustive - "All appropriate inquiry" does not mean an exhaustive assessment of a clean property. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of the ASTM Standard)
- Comparison with Subsequent Inquiry - ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent ESAs should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of the ASTM Standard)

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a Phase I ESA when the ASTM E1527-13 standard is employed. According to the ASTM E2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions, the following limitations apply:

- Uncertainty Not Eliminated in Screening - No vapor encroachment screen (VES) can wholly eliminate uncertainty regarding the identifications of vapor encroachment conditions (VECs) in connection with the target property. (Section 4.5.1)
- Not Exhaustive - The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2)

- Comparison with Subsequent Investigations - It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify any VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors. (Section 4.5.4)

This report was prepared pursuant to an agreement between the Client and AECOM and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM-generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

## 1.4 Site-Related Limiting Conditions

The following site-specific limitations were encountered during the course of this assessment:

- It was not feasible to evaluate every individual room or space within each of the buildings during the site visit. This includes temporary office trailers located adjacent to several of the on-site buildings, electrical substations maintained by Con Edison, and a storage trailer located adjacent to one of the temporary structures. AECOM's evaluation of the buildings focused on areas where hazardous substances are handled. Based on the use of the subject property (commercial warehousing operations), this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- During the site visit, AECOM did not access the roof of the buildings identified as J1 Shed, J2 Shed, N Shed or the Graffiti Building. The available documentation reviewed as well as the site visits did not suggest any hazardous materials associated with the roofs. Based on this information, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- A debris pile was observed located along a chain link fence behind the temporary storage buildings. AECOM was not able to observe the asphalt pavement in this area due to the presence of the debris pile. It is unknown if staining is present beneath this pile. Based on the type of materials present (discarded aboveground tanks, tires, empty 55 gallon drums, wooden pallets, and miscellaneous automotive equipment) and the lack of and observed liquids, this particular site-relating limiting condition is not expected to have a significant limitation to this assessment.
- An inaccessible subsurface vault was located inside the garage portion of the Tower Building at the subject property. AECOM was unable to determine the use of this vault. Based on this information, this particular site-relating limiting condition may present a significant limitation to this assessment.
- AECOM did not have the opportunity to interview a knowledgeable site contact as part of the site reconnaissance and ESA process. AECOM also did not have access to site operators to discuss current or former operations including current waste handling practices, oils and

hazardous materials use, etc. Based on this information, this particular site-relating limiting condition may present a significant limitation to this assessment.

## 1.5 Data Gaps/Data Failure

The following data failure/data gaps were encountered during the course of this assessment:

- An inaccessible subsurface vault was located inside the garage portion of the Tower Building at the subject property. AECOM was unable to determine the use of this vault. Based on the lack of access and information, AECOM considers this subsurface vault a significant data gap that requires further evaluation to determine if the vault is a potential environmental concern.
- AECOM could not visually inspect the condition of possible hydraulic lifts associated with three loading docks observed at the J2 Building. The age of the J2 building suggests that if hydraulic lifts are present they may contain PCB builds. Based on the lack of access and information, AECOM considers the loading docks and possible hydraulic lifts a significant data gap that requires further evaluation to determine if the loading docks area a potential environmental concern.
- As specified in the agreed upon scope of work, title and environmental lien searches were not conducted as part of this ESA. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment. In addition, the user was not aware of environmental liens or activity use limitations (AULs) that have been placed on the subject property.
- Per ASTM, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM was unable to interview past owners and/or operators at the subject property. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.
- Per the agreed scope-of-work and the ASTM Standard, information related to certain site-specific items should be provided by the ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM provided the Client (the users) with the User Questionnaire from the ASTM Standard; at this time the completed form has not been returned for inclusion in this report. However, this data gap is not expected to represent a significant limitation to this investigation given the historical use of the subject property.
- As of the date of this report, AECOM has not received any responses to Freedom of Information Act (FOIA) requests made to the Fire Department of the City of New York (FDNY), New York City Department of Environmental Protection (NYCDEP), New York State Department of Health (NYSDOH), or New York State Department of Environmental Conservation (NYSDEC). However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.

## 2. Site Description

### 2.1 Site Location and Parcel Description

The subject property is located along the northwest side of Second Avenue between 33rd and 39th Streets, in Brooklyn, Kings County, New York.

According to the City of New York Department of Finance (NYCDOF), the subject property consists of a single parcel of land designated as Block 662, Lot 1. The location of the subject property is illustrated on Figure 1 - Site Location Map.

### 2.2 Site Ownership

According to the NYCDOF, the subject property is owned by the NYC Department of Small Business Services (DSBS).

### 2.3 Site Visit

Mr. Nelson J. Abrams with AECOM's 125 Broad Street, New York, New York office visited the subject property on January 11, 2018 and February 20, 2018. A security escort accompanied Mr. Abrams during the January 11, 2018 site visit while no escort was provided during the February 20, 2018 site visit. Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.4.

The site visit methodology consisted of walking over accessible areas of the subject property, including the building interior and exterior, the perimeter, and the portions of the surrounding area. The following sections summarize the results of the site visit.

#### 2.3.1 Site and Facility Description

The subject property is approximately 88 acres and is mostly covered in asphalt pavement, remnants of demolished buildings, multiple railroad sidings, and several areas of chain link fencing that were used as part of the previous operations. There is a security guard stationed at all times at the entrance located on 39<sup>th</sup> Street. The buildings located on the property consist of the J1 Shed, J2 Shed, N Shed, Graffiti Building, Con Edison substation, and temporary structures at 650 2nd Avenue, and the Tower Building and Scale House at 632 2nd Avenue. The combined area of the three sheds, Graffiti Building, and Tower and Scale House Buildings is 370,580 square feet. The combined area of the two temporary structures is approximately 8,000 square feet.

A brief description of each building is as follows:

- J1 Shed – Located along the southern portion of Pier 39. The building was used for the storage and warehousing of products unloaded from ships docked at the terminal. The building has a steel structural system and is in a general state of disrepair. The northeast and southwest side of the building is constructed with concrete base and exposed concrete block along the bottom, and corrugated metal and polycarbonates sheets on top. The southeast side of the building is constructed with concrete block and covered by cement. The northwest side appears to have been recently repaired with corrugated metal panel. The building has two concrete loading docks on the northeast side connected to the ground via a ramp. The building has a two-story mezzanine along its eastern perimeter which contains the remains of administrative offices. The first floor includes the building's former

boiler/mechanical room. This room contained the remnants of a gas-fired boiler, an air compressor, an air handling unit, and a sump. This portion of the building also has an operating pump and meter room which is used to supply water to the buildings sprinkler system in case of a fire. Two empty 55-gallon plastic drums (contents unknown) were found in this room. No evidence of staining, leaks, or releases were observed in the vicinity of the drums, with the exception of a small area of water staining. The main portion of the building is warehousing which, for the exception of a few trailers containing commercial displays, two portable loading ramps, and empty 55-gallon drums, was empty. The exterior of the building contains several subsurface valve boxes adjacent to the bulkhead on the southern side of the pier. At the time of January 11, 2018 inspection, the NYC Department of Buildings (DOB) was working on the construction of a large crane on the western edge of the pier.

- J2 Shed – Located on the northeast portion of Pier 39. This building was being used for the storage of plywood imported from Brazil. The building has a steel structural system and shows signs of moderate disrepair. The northwest side of the building appears to have been recently repaired with corrugated metal panel. The remaining three sides of building were constructed with concrete base and exposed concrete block along the bottom, and corrugated metal and polycarbonates sheets on top. The building has two concrete loading docks on the northeast side connected to the ground via a ramp and stairs. The eastern portion of the building also has an operating pump and meter room which is used to supply water to the buildings sprinkler system in case of a fire. Numerous propane tanks used to fuel fork lift vehicles were stored along the exterior western wall of the building.
- N Shed – Located southeast of the J2 Shed on Pier 39. The building had been rented by Phoenix Underwater Construction. The building has a steel structural system and shows signs of moderate disrepair. The exterior shell of the building was constructed with a concrete base and exposed concrete block along the bottom, and corrugated metal and polycarbonates sheets on top. The northern portion of the building has an abandoned pump and meter room. The northeastern portion of the building also has an operating pump and meter room that is used to supply water to the building's sprinkler system in case of a fire. A 100-gallon aboveground storage tank (AST), used to power a backup generator, was present in the pump and meter room. No staining was observed in the vicinity of the AST. The building was predominately empty during the January 11, 2018 site visit with the exception of two-55 gallon drums containing anti-freeze, several 5-gallon containers of paint, a single dry electrical transformer, and several pieces of equipment which appeared to have recently been painted. No evidence of staining, leaks, or releases was observed in the vicinity of the paint or antifreeze.

Located between the J1, J2, and N Sheds were tubular sections for the base of the proposed Staten Island Ferris Wheel. These sections are currently being stored at the site as the construction of the wheel has temporarily ceased due to financial issues. Two petroleum barges were also docked on the pier adjacent to the N Shed and Graffiti Building. Several large pieces of construction equipment, such as lifting cranes, were stored around the N1 Shed and Graffiti building. It is unknown if this equipment is still operable.

- Graffiti Building – Located immediately adjacent to the southeastern portion of the N shed. The building is also identified as a maintenance building and had been rented by Phoenix Underwater Construction. The building has a steel structural system and shows signs of moderate disrepair. The exterior shell of building is constructed with concrete base and exposed concrete masonry block along the bottom, and corrugated metal and polycarbonates sheets on top. Interior metal stairs access a second floor mezzanine area that contained a small office and storage space. The heating and cooling system within the

building was abandoned. Miscellaneous construction equipment and supplies associated with Phoenix's operations were present including a small front end loader and compressed gas cylinders of unknown contents. The housekeeping practices were generally poor. The building also contains a residential electric hot water heater, and a fire sprinkler control system.

An equipment and materials boneyard was present along the northeastern perimeter of this building. Several 55-gallon plastic drums of unknown content were observed scattered within the boneyard and could not be accessed. Four 330-gallon plastic containers of Sikadur 35, an epoxy sealing adhesive, were stored along the northern and eastern walls of the building. An abandoned transformer listed as containing polychlorinated bi-phenyls (PCBs) was present along the northern wall of the building near the N1 Shed. A 550-gallon diesel fuel AST with secondary containment typically used on construction sites was located near the southeast corner of the Graffiti Building. No evidence of staining, leaks, or releases was observed in the vicinity of the hazardous material and petroleum storage.

In addition, a barge used by Phoenix was docked along the pier near the northern side of the Graffiti building. A 550-gallon AST tank containing diesel fuel was observed on the barge. No containment for this AST was visible.

- Tower Building - Located along the eastern portion of Pier 33 near the parking lot along Second Avenue. The building was formerly used as a communications outpost and a scale house for trucks coming in and out of the terminal. The building had cast in-place concrete floor on first and second level and the tower portion of the building is steel frame. Access to the roof indicated that it is of asphalt gravel construction. The area to the south of the building had eight bays for truck scales embedded in-ground with concrete curbs. The armor on the scales appeared rusted and damaged. Debris including pallets and wooden spools were observed in the vicinity of the scales. The majority of the building is abandoned and in disrepair.

The garage portion of the Tower Building is currently being leased by Demand Electrical Inc. (DEI) of Brooklyn, New York for the parking of their commercial vehicles as well as the storage of numerous electrical parts and components, including a fork lift and two man lifts. Their administrative operations are maintained in an adjacent office trailer located along the north side of the building. Housekeeping within DEI's storage area was extremely poor. Bulk chemicals and petroleum products stored in the garage consisted of six 10-gallon pails of lubrication oil, several 2.5 and 5-gallon cans of gasoline and kerosene located in several rooms used by DEI used for storage, and three 55-gallon plastic drums of a liquid drying agent. An inaccessible subsurface vault was located inside the garage. DEI also uses several storage container boxes located west of the tower building. No evidence of staining, leaks, or releases was observed in the vicinity of the hazardous material and petroleum storage.

The northern perimeter of the building contains the office trailer for DEI. In addition, an abandoned transformer labeled as containing PCB fluids was present along the northern portion of the building in an area that was gated and inaccessible. Staining was observed in the vicinity of this abandoned transformer; however, AECOM was unable to determine if the staining was water or transformer oil. Two 55-gallon drums of unknown content were present, as well as debris (no other hazardous materials observed), and the remnants of the old boiler used when the building was operational. Approximately 150 feet northeast of the Tower Building is a small concrete block shed which contains the possible remains of a transformer. The building's faded label says Transformer Alarm Notify Gate.

- Temporary Structures – Two temporary structures and an office trailer are located within a chain link fenced area near the corner of Second Avenue and 39<sup>th</sup> Street. The office trailer is located immediately to the east of the two temporary structures and was not inspected during the site visits.

The larger of the two structures is approximately 5,000 square feet and is a steel structural system with corrugated sheet metal for the walls and a rubberized roof. The building is used for the maintenance of tractor trailer trucks. Petroleum products and other automotive-related fluids observed in the building included four 250-gallon ASTs labeled as diesel fuel, three 55-gallon drums labeled as motor oil, one 55-gallon drum labeled as hydraulic fluid, one 55-gallon plastic drum containing diesel exhaust fluid, one 30-gallon drum containing grease, and one 55-gallon plastic drum containing antifreeze. The building also contained five, two post aboveground automobile lifts, each with a separate hydraulic fluid reservoir tank of approximately four gallons. The building also has an air powered scissor lift used for larger vehicles. A Bobcat front end loader was also stored within the building. The building was heated with two air plenums attached to the ceiling, with each unit fueled by a 250-gallon fuel oil tank located in a secondary containment structure along the perimeter of the building. The housekeeping within the structure is extremely poor with significant petroleum stains on the concrete/asphalt floor. In addition, a leaking trash compactor was observed along its southern wall.

The second temporary structure consists of a wood-framed building with a roof constructed of plastic sheeting and is also used for the maintenance of smaller automotive vehicles. This building also had poor housekeeping as various oily parts and empty diesel fuel cans were scattered throughout. The floor of the building was asphalt pavement and it appeared to be significantly stained with petroleum fluids. Some cracks were observed within the asphalt; however, no floor drains were observed in this building. The building contained two 55-gallon drums of motor oil and numerous smaller containers of gasoline, diesel, and other petroleum products. No heating system was visible within the building.

Located immediately to the west of both buildings stored along a chain link fence were discarded materials consisting of stacks of used tires, multiple empty and full 55-gallon steel and plastic drums of unknown content, three or four empty 250-gallon ASTs, various automotive parts, wood pallets, concrete barriers, old generators, and miscellaneous metal debris. A large storage trailer was not accessible in this area was not accessible during the site visit. This portion of the subject property also indicated evidence of an underground storage tank or other structure due to the presence of several features including patched pavement and what appeared to be a brass cap similar to an old fill cap in the concrete surface.

The remaining area of the subject property consists of predominately of asphalt pavement. Many areas of the pavement show subsidence indicating that the fill brought into the area to create the terminal has possibly shifted and/or compacted over time. The remains of chain link fencing exist throughout the property and is likely used to isolate other buildings that have since been razed. Many locations within the property show evidence of the former building footprints. Storm drains exist throughout the subject property, and some of these storm drains located near the buildings on Pier 39 may drain directly discharge into the adjacent Gowanus Bay. No visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields was observed on the subject property.

Many abandoned rail spurs exist on the subject property. Signage posted on the subject property and on Second Avenue indicates that some of these spurs are still active. In addition, a portion of the site located west of the temporary structures is used for the temporary parking of new Hyundai automobile. At the time of finalizing this document, the operator allowed to park these vehicles on the subject property had yet to be identified.

### **2.3.2 Surrounding Properties**

The subject property is bordered to the northwest by the Gowanus Bay and to the northeast by the Sims Municipal Recycling Facility; to the east by automotive parking spaces for the Industry City employees and customers and Second Avenue, beyond which are the commercial properties known as Industry City; to the south by the intersection of Second Avenue and 39<sup>th</sup> Avenue, beyond which are automotive parking spaces along 39<sup>th</sup> Avenue and additional commercial properties (some mostly vacant or under reconstruction) also associated with Industry City; and to the west by the Gowanus Bay.

AECOM did not observe any gasoline service stations or dry cleaners in the immediate vicinity (500 feet) of the subject property. The presence of the Gowanus Bay immediately adjacent to the subject property is a recognized sensitive receptor. No other sensitive receptors (i.e. day care centers, additional schools, hospitals) are located adjacent to the subject property. Based on AECOM's site reconnaissance of the surrounding neighborhood, no off-site sources of concern were identified.

### **2.3.3 Petroleum Products and Hazardous Materials**

The presence of petroleum products or hazardous materials was not observed in the J1 or J2 Sheds. Two, 55-gallon drums of antifreeze, a 250-gallon diesel fuel AST for the backup generator, and several 5-gallon containers of paint were observed in the N Shed. Several 55-gallon plastic drums of unknown content and four 330-gallon containers of epoxy sealant were present along the perimeter of the Graffiti Building. Products affiliated with the maintenance of motor vehicles and construction equipment (such as paints, lubricants, small containers of motor fuels) was present within both the Graffiti and Tower Buildings (Refer to Section 2.3.1). As described in Section 2.3.1, the temporary structures contained numerous amounts of automotive related fluids such as diesel fuel stored in four 250-gallon ASTs, gasoline, motor oils, hydraulic fluids, grease, antifreeze, and diesel exhaust fluid. In addition, two, 250-gallon fuel oil ASTs are used to fuel two air plenums in the larger of the two temporary structures. Petroleum staining was also observed in both of the temporary structures.

### **2.3.4 Polychlorinated Biphenyls**

PCB-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the age of the subject property (pre-1979), the potential exists for PCBs to be present on site.

PCB-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Two abandoned transformers labeled as PCB-containing were present at the subject property, one along the northern wall of the Graffiti Building and one within the Tower Building. Staining was observed in the vicinity of this abandoned transformer in the Tower Building; however, AECOM was unable to determine if the staining was water or transformer oil. All other electrical equipment that is functional at the property is relatively recent and thus is not expected to contain PCBs.

### Transformers

No pole-mounted transformers were observed on the subject property during the site visit. Electrical equipment cabinets containing multiple dry-type transformers are present on the 39<sup>th</sup> Street Pier and within the J1 and J2 Sheds.

### Light Ballasts

Fluorescent light ballasts contain capacitors that may be filled with PCB-containing dielectric fluid. Typically, newer light ballasts will contain labeling stating "No PCBs". Based upon the age of the buildings, it is possible that the light ballasts within any of the buildings at the subject property, with the exception of the temporary structures, contain PCBs. An inspection of individual ballasts was not included within the scope of this assessment.

### Other Hydraulic Equipment

Possible hydraulic lifts were observed on the subject property for three loading docks observed at the J2 Building. The age of these buildings may indicate the presence of PCB fluids. No leaks or stains were observed from these lifts. No evidence of underground lifts in maintenance areas was observed at the subject property. AECOM observed a trash compactor on the subject property with a small leak to the ground surface. Information pertaining to this compactor was not available during the site reconnaissance.

## **2.3.5 Aboveground Storage Tanks**

ASTs were not observed during the site visit in the J1, J2, or in the Tower Building. As described in Section 2.3.1, a 100-gallon AST containing diesel fuel used to power a backup generator was located in the pump and meter room of the N Shed. An AST was observed along the southern exterior wall of the Graffiti Building and on-board the Phoenix barge docked adjacent to the Graffiti Building. Six ASTs were observed at the larger of the two temporary structures. Four diesel tanks were located inside the structure while two heating oil ASTs were located along the western and southern exterior walls of the building. Staining was observed throughout the floor of the larger temporary structure, including the area of the ASTs. No other ASTs were listed in the site-specific environmental database report reviewed by AECOM, or otherwise identified during AECOM's review of historical aerial photographs.

## **2.3.6 Underground Storage Tanks**

No evidence of underground storage tanks were observed at the subject property with the exception of an area located to the west of the temporary structures. AECOM observed features in this area including patched pavement and a brass cap which appeared similar to an old fill cap. Unidentifiable markings were observed in the concrete pavement in this area.

## **2.3.7 Solid Waste**

There was no evidence of any contracted or managed disposal of solid waste anywhere at the subject property, including in the leased/operable areas of the subject property. However, solid waste containment structures including a trash compactor were observed on the subject property and solid waste was observed collected in areas of the subject property. It is presumed that solid waste is removed off-site by contractors, however additional information was not available concerning the removal of solid waste from the subject property.

### **2.3.8 Hazardous Waste**

No evidence of hazardous waste generation was observed at the subject property. The operations within the temporary structures likely generate petroleum wastes such as waste oil and anti-freeze. However, there was no visual evidence identifying where these materials are stored or disposal practices. In addition, there was no one available to inquire if such materials are generated, where they are stored, and how they are disposed. The subject property was not listed as a current generator of hazardous waste in the site-specific database report.

### **2.3.9 Water**

The subject property has no active water lines to obtain potable water, with the exception of water to the temporary structures which is municipal water supplied by NYCDEP. No potable water wells were observed at the subject property. It is unclear if fire suppression water is supplied by the NYCDEP or obtained directly from Gowanus Bay. Potable water at the subject property associated with operations in the temporary office trailers consists of bottled water brought to the subject property by workers.

### **2.3.10 Wastewater**

Sanitary wastewater is not generated at the subject property as all lavatory facilities are non-functioning. Operations at the subject property use portable toilets and sinks which are serviced on a regular basis.

### **2.3.11 Stormwater**

Stormwater drains were observed throughout the subject property. Based upon visual observation during the site visit, it is likely that these storm drains discharge directly into the Gowanus Bay. No staining or evidence of a release was observed in the vicinity of the stormwater drains.

### **2.3.12 Heating and Cooling**

With the exception of the fuel oil-fueled air plenums located within the larger of the two temporary structures, none of the buildings at the subject property are heated and none of the buildings have air conditioning.

## 3. Environmental Setting

### 3.1 Topography

According to the United States Geological Survey (USGS) topographic maps of the subject property area (Jersey City, NJ and Brooklyn, NY quadrangle maps) and a review of the Google Earth application, the elevation of the subject property is approximately 1 to 2 feet above mean sea level (msl). Based on a review of these technical resources and AECOM's site visit, the subject property is generally flat with a slight downward slope towards the northwest.

### 3.2 Soil/Geology

The area containing the subject property lies within the glaciated Coastal Plain physiographic province of New York. The bedrock geology in the area is not well documented, and the depth to bedrock is unknown; however, The Geology and Engineering Geology of the New York Metropolitan Area, Field Trip Guidebook T361 (Baskerville 1989) prepared for the 28th International Geological Congress, and the Geologic Map of New York City (compiled 2001) identify underlying bedrock as the Cambro-Ordovician age Hartland Formation. The Hartland Formation in the area of the subject property is part of the Pelham Bay Member and consists of gneiss. Surficial deposits in the region are mapped as glacial till (Cadwell et al 1986). Depending upon the specific location in the region the overburden material could also include fluvial, marine-tidal marsh, and recent fill deposits. Many low-lying areas have been historically filled to accommodate development.

Soils in New York City are typically classified as "Urban Land", a generic description of soils that have been buried, re-worked, or otherwise altered as a result of human activities. The buried, native soils in the general area of the subject property are believed to be composed of loamy sand, silt loam, sandy loam and fine sandy loam. The deeper soil types are believed to consist of very gravelly-loamy sand, and stratified sandy loam. It is likely that the original soils at the subject property developed on glacial material. Based upon the proximity of the subject property to Gowanus Bay, visual observations, and historical resources reviewed, the subject property is assumed to be constructed on man-made fill.

### 3.3 Ground Water/Hydrology

Based on previous work conducted by AECOM along the Gowanus Bay in Sunset Park (located 1500 feet to the northeast) groundwater was encountered during the advancement of soil boring at depths ranging between 5 to 10 feet below grade. Based on the proximity to the subject property to the Gowanus Bay and the topography of the subject property and surrounding area, groundwater is anticipated to flow in a westerly direction and will have some tidal influence. However, the actual ground water flow direction in the vicinity of the subject property cannot be determined without site-specific ground water monitoring well data.

## 4. Site and Area History

Historical information for the subject property and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Aerial photographs dated 1924, 1940, 1943, 1951, 1953, 1961, 1966, 1974, 1981, 1985, 1995, 2006, 2008, 2009, and 2011;
- Sanborn® Fire Insurance Maps (Sanborn Maps) dated 1888, 1906, 1921, 1922, 1926, 1928, 1951, 1965, 1977 – 1980, 1982, 1983, 1985, 1987, 1988, 1991–1995, and 2001 – 2007;
- Topographic maps dated 1891, 1898, 1900, 1905, 1947, 1955, 1956, 1967, 1979, 1981, 2013, and 2014;
- City directories for the years 1928, 1934, 1940, 1945, 1949, 1960, 1965, 1970, 1973, 1976, 1980, 1985, 1992, 1997, 2000, and 2005; and
- Online Property Information reviewed via the NYCDOF and the City of New York City Department of Buildings (NYCDOB) websites.

Note that Sanborn Map coverage of the subject property and/or adjacent properties was not available in all years reviewed.

### 4.1 Subject Property

Historical research indicates the subject property was primarily open water as early as 1888. Only the southern-most portion of the subject property along 39<sup>th</sup> Street and Second Avenue was developed with a pier as the New York & Brooklyn Ferry & Steam Transportation Company. A coal bin was present at the end of the pier. In addition to the ferry (now identified as the 39<sup>th</sup> Street Ferry), a covered platform extended out into the Gowanus Bay on urban fill in front of 38<sup>th</sup> Street by 1906. Smaller buildings identified as a boat maker, a storage building, and two boat houses are located on urban fill between 34<sup>th</sup> and 37<sup>th</sup> Streets.

By 1922, the subject property had been developed into a series of piers identified as the City of New York Piers. It is assumed that the piers were constructed on man-made filled areas. The 39<sup>th</sup> Street Ferry is identified as the City of New York Ferry with multiple buildings and several railroad sidings listed as the South Brooklyn Railroad. Two additional piers had been constructed into Gowanus Bay. These piers were City Pier – Moore & McCormack Company, Inc. (33<sup>rd</sup> Street), and Luckenbach Steamship Company Inc. Lessee (35<sup>th</sup> Street). Multiple buildings were present between these piers and Second Avenue. By 1926, the 39<sup>th</sup> Street Pier had been enlarged to include the ferry service, the City of New York Police Department Garage and Store House building, an unloading and storage area for timber, and a Fire Boat Station listed as New York Fire Department Engine Company 223. In 1928, the subject property was relatively unchanged with the exception that the Moore & McCormack pier is identified as the American Steamship Corporation and that the Luckenbach Steamship Company now has its own building at the entrance to the pier.

As of 1940, four bulk storage tanks were present where the current N Shed is located. The 1951 Sanborn Map identifies these tanks as four 160,000 aboveground diesel fuel bulk storage tanks operated by the New York City Transit System with a diesel fuel filling station located southeast of these tanks. The Sanborn Map also indicates that much of Pier 39 was under the operation of the New York City Transit System. The 39<sup>th</sup> Street Ferry was still in operation and the rail spurs entering the subject property were identified as the New York City Transit System Freight Department with a rail turnout identified as the Church Street Trolley Terminal. The City of New York Police Department Garage and Store House building was identified as the bus garage and

repair shop for the New York City Transit System. Two gasoline tanks were identified in the northwest corner of the building. An additional bus garage was located adjacent to this building to the northwest. Located southeast of these buildings was a small structure listed as a tractor repair building for the Moore McCormack Lines. This building was identified as having a gasoline tank. At the edge of the pier, Engine Company 223 was illustrated to have an oil room. The 35<sup>th</sup> Street Pier was still operated by the Luckenbach Steamship Company. Buildings operating between the piers and Second Avenue consist of storage buildings for the Luckenbach Steamship Company and several storage buildings for the City of New York Department of Purchase between 32<sup>nd</sup> and 36<sup>th</sup> Streets. The Luckenbach building was identified as having a gasoline tank in the southeast corner of the building and along the northwest portion of the building and the Department of Purchase building located between 35<sup>th</sup> and 36<sup>th</sup> Streets was identified as having two gasoline tanks outside of its northeastern wall.

The 1953 aerial photograph indicated that the four bulk diesel fuel storage tanks had been replaced by the current N Shed. In 1961, aerial photographs show extensive construction on the 39<sup>th</sup> Street Pier as it is extended further out into New York Harbor into its current configuration.

By 1965, Pier 39 had undergone some significant changes. The 39<sup>th</sup> Street Ferry was identified as the Department of Marine and Aviation 39<sup>th</sup> Street Terminal, with a portion of the area identified as the North East Marine Terminal used by the Mitsui Line. The J1 and J2 Sheds were present, but are connected with a structure parallel to the Gowanus Bay on the pier, giving the entire building a "J" configuration (hereinafter identified as the J Shed). Rail spurs from the New York City Transit System Freight Department were still present, but the trolley service was no longer present. The New York City Transit System buildings present in 1951 were identified as storage buildings by Universal Terminal & Stevedoring Company. Additional storage buildings operated by Universal Terminal & Stevedoring Company were located southeast of the former New York City Transit System buildings along Second Avenue between 36<sup>th</sup> and 37<sup>th</sup> Streets. The former operations of the Luckenbach Steamship Company were identified as being operated by the Farrell Lines, Inc. with the addition of a lift truck garage located immediately northeast of their storage buildings. This garage currently remains and is identified as the Tower Building. With the exception of an additional building identified as a transit shed located southwest of the Farrell Line operations, there were no other changes to the subject property since 1961.

The 1974 the historical aerial photograph indicates significant changes to the subject property. Though the J Shed and N Shed were present, the majority of the buildings previously identified as being operated by the Universal Terminal & Stevedoring Company were no longer present and had been replaced by asphalt pavement for the storage of cargo containers and motor vehicles. The current Graffiti Building located near the N Shed was present in the photograph. The only remaining building was an unidentified structure near Second Avenue located east of the Tower Building. The majority of the storage buildings for the Farrell Lines have been demolished, with the exception of one structure currently known as the Tower Building. In addition, the Scale House, which still remains present at the subject property, was visible in the photograph. The 33<sup>rd</sup> Street and 35<sup>th</sup> Street were replaced with urban fill to create a large asphalt paved pier with two operating cranes to remove cargo containers from docked ships. The 35<sup>th</sup> Street Pier remains at the subject property as a pier shed. A portion of the building used by the City of New York Department of Purchase was demolished while the remaining portion is identified as being used for manufacturing.

As of 1979, the boundaries of the subject property were generally in its current configuration. The 1979 Sanborn map indicates the Graffiti Building located near the N Shed was built in 1973. The only remaining building along Second Avenue was the storage facility operated by Universal Terminal & Stevedoring Company located between 36<sup>th</sup> and 37<sup>th</sup> Streets. The Tower Building and the Scale House were illustrated in the map.

By 1980, the building along Second Avenue identified as manufacturing was no longer present. The subject property is also listed as being leased by the Northeast Marine Terminal Company, Inc. There were no substantial changes to the subject property until 1987 when the storage building occupied by the Universal Terminal & Stevedoring Company along Second Avenue was no longer present. The majority of the subject property was being used for the storage of cargo containers directly on the asphalt paved surface or for the parking of motor vehicles.

The subject property remains relatively unchanged since 1987 with the exception of the following modifications:

- 1995 - The cargo cranes located on the where the 33<sup>rd</sup> Street Pier to use to be were no longer present and that the 33<sup>rd</sup> Street pier indicate that it is in a state of disrepair.
- 2006 – The 33<sup>rd</sup> Street Pier had been removed.
- Between 2009 and 2011 a section of the J Shed that parallels the edge of Pier 39 had been removed; thus creating two separate buildings currently known as the J1 and J2 Sheds. Multiple cargo containers and automotive vehicles are parked throughout the subject property.

## 4.2 Off-site Properties

### NORTH

Properties to the north and northeast in 1888 consisted of New York Bay and several piers and storage buildings. By 1906, these piers were occupied by the Crescent Brick & Supply Company, Ross Iron Works, the Empire Repair Company, and the Raab Iron Works. By 1922 all of the properties to the north and northeast were under the operation of the James Shewan & Sons – Ship Yards and James Arnott. The 29<sup>th</sup>, 30<sup>th</sup>, and 31<sup>st</sup> Street Piers were present to the northwest and are operated by U.S. Steel Products Company, Norwegian – American Line, and Fabre Line, respectively.

The operations of the shipyard were better defined on the 1926 Sanborn Map and include a plate shop, pipe shop, electrical shops, machine shops, saw and planning mill, lumber storage, oil tank storage, and several operations associated with ship building. The 30<sup>th</sup> Street Pier was identified as being operated by Lloyd Brasileiro and the 31<sup>st</sup> Street City Pier identified was operated by the Royal Netherlands Steamship Company.

The shipyard operations remain the same until sometime during or after World War II when the shipyard was identified on the 1951 Sanborn Maps as operated by the Bethlehem Steel Company. It was noted on the Sanborn Map that the property information had not been corrected since 1941. The 1951 map also indicates that the property located immediately to the north of 29<sup>th</sup> Street contained several buildings owned by Sevedores for the use as storage, a warehouse, and a garage. A building located immediately to the northeast was identified as manila rope storage owned by G. Johnson Inc. The 29<sup>th</sup> Street Pier was identified as being operated by the Isthmian Steamship Company, while the operators of the 30<sup>th</sup> and 31<sup>st</sup> Street Piers remain unchanged. Isthmian also operates a storage building located on 29<sup>th</sup> Street and Second Avenue. There appears to be no significant changes to these properties until 1974 when an aerial photograph shows that urban fill was being deposited between the 30<sup>th</sup> and 31<sup>st</sup> Street Piers to extend the operations of the piers further into New York Bay. This area became known as the 30<sup>th</sup> Street Pier. By 1978, the 29<sup>th</sup> Street Pier is operated by Argentine Lines and Constellation Lines and that the 30<sup>th</sup> Street had been completed. The storage building previously being operated by Isthmain was now listed as being operated by the New York City Department of Sanitation. The property to the north and northeast previously identified as operated by Bethlehem Steel was now identified as a

gas turbine generating station operated by Con Edison. Two 1,000,000-gallon oil barges are docked within the confines of their operations.

As of 1979 the 29<sup>th</sup> Street Pier was no longer occupied. The properties to the north remained relatively unchanged until 2001 when the New York City Department of Sanitation was no longer identified as operating the building to the north. No changes were identified in any of the historical documents reviewed. However, in 2013 SIMS Municipal Recycling Facility was opened on the 30<sup>th</sup> Street Pier.

#### EAST / SOUTHEAST

The properties to the east of the subject property across Second Avenue in 1888 were mostly vacant. The South Brooklyn Rail Road Terminal Company, numerous rail spurs, and residential dwellings and storefront commercial properties were located to the southeast. The properties were mostly unchanged in 1906 with the exception of a small building along 33<sup>rd</sup> Street identified as Bush Terminal Company Freight Depot and several commercial operations in the southeast identified only as compound buildings and a repair shop with a saw and planing mill and a machine shop. By 1924, all of the vacant properties were developed with various storage buildings and loft space which are identified in the 1926 Sanborn Map as the Bush Terminal Company. Northeast of the subject property consisted of the location of the Bush Terminal Company Power House that contained a transformer room and two gasoline tanks in Building No. 9 near the corner of Second Avenue and 33<sup>rd</sup> Street. Multiple rail spurs identified as the New York Municipal Railway Corporation and a machine and print shops were located towards the southeast.

The properties towards the east remained relatively unchanged through 2007. The exceptions were the powerhouse was identified as the Brooklyn Edison Company No. 32 building in 1951. The rail spurs to the southeast were identified in 1951 as the New York City Transit System B.M.T. Division, Bus Mechanical Department, and Freight Department. A filling station with a gasoline tank was also identified in this area and operated by the transit system. By 1965, there was no identification as to who operated the rail spurs and the filling station had become a pipe shop. Based on information obtained online regarding the history of Industry City, in 1996, a Costco retail store was constructed in the area of the rail spurs to the southeast. In addition, many of the lofts and storage buildings of the Bush Terminal Company (also known as Bush Terminal Associates) were in a state of disrepair. In 2013, a redevelopment project began in the area with the renovation of the lofts and storage buildings. Today this area is known as Industry City. It presently contains over 450 businesses ranging from NYC manufacturing companies to tech entrepreneurs, design and media companies.

#### SOUTH / SOUTHWEST

The properties to the south and southwest have been occupied by industrial and commercial operations since at least 1888. These operations included the Phoenix Chemical Works, H.W Johns Manufacturing Company, Pneumatic Pulv Company, and the Bush and Denslow Manufacturing Company. The structures and processes identified at these facilities included acid chambers, bulk bleaching storage tanks, and petroleum and distillation products such as naphtha, refined oil, and tar. By 1906, all of these operations had ceased and were replaced by the H.W. Johns Manville Company (manufacturers of asbestos products) and storage buildings associated with the Bush Terminal Company. Additional operating entities included the F.S. Sanford Coal Company and coal yard, Dannemiller Coffee Company, Marcus Ward Company, Bush Docks, Brooklyn Rapid Transit and rail yard. By 1926, most of the area was occupied by lofts and storage buildings owned by the Bush Terminal Company. Additional operations included the Dannemiller Coffee Company, Commonwealth Fuel Oil Company, S & S Storage and Warehouse Company,

Bush Terminal Service Station – Freight Terminal, and warehouses for the Holcomb Rubber Company. Similar operations were identified in 1928.

As of 1951, the majority of the properties to the south and southwest were lofts and storage buildings operated by the Bush Terminal Company. Additional operating facilities identified included Dannemiller Coffee Company, East Coast Valve Company, and the Eskay Coal & Fuel Oil Company and other small general stores and commercial buildings. A filling station was located northwest of the Dannemiller Coffee Company. The area to the south and southwest was generally unchanged in 1965 with the exception of the Dannemiller Coffee Company which was labeled as a textile warehouse. No significant changes to these properties were identified since 1965 with the exception of the filling station near the former coffee company identified as an auto repair shop in 1993.

As with the properties east of the subject property, many of the lofts and storage buildings of the Bush Terminal Company were in a state of disrepair by the early 1990s. These buildings are also part of the Industry City redevelopment project and several of these structures have either been renovated or are currently being renovated.

#### WEST

The subject property is bordered to the west by Gowanus Bay.

### 4.3 Previously Prepared Environmental Reports

AECOM inquired about existing environmental reports associated with the subject property. Previously prepared environmental reports were not identified during this assessment. Red Hook did not provide AECOM with any information regarding previous environmental assessments or reports associated with the subject property.

## 5. Database and Records Review

### 5.1 User Provided Information

Section 6 of the ASTM Standard states that certain tasks, which will help to determine the possibility of RECs associated with the subject property, are generally conducted by the ESA report user. This includes the following: reviewing title records for environmental liens or activity and land use limitations and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the subject property, or significant reduction in the purchase price of the subject property. Per the agreed scope-of-work, information related to these items should be provided by the ESA report user to AECOM. The User Questionnaire from the ASTM Standard was not provided to the client at the time of this report was prepared. This data gap is not expected to represent a significant limitation to this investigation based on other documentation reviewed as part of the Phase I ESA.

### 5.2 Title Records/Environmental Liens

Per the agreed upon scope of work, a chain-of-title and an environmental lien search were not performed as part of this assessment.

### 5.3 Database Information

In accordance with the scope of work and ASTM Standard E-1527-13, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from an on-site and/or off-site sources of concern has the potential to impact the subject property. The database abbreviations are provided in the site-specific environmental database report.

The database report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. Additional sites were identified within the database report; however EDR was not able to map them to specific locations due to insufficient/contradicting address information. These sites were included in the database report as "orphan" sites. Based upon AECOM's review, there does not appear to be any significant concerns associated with any of the orphan sites. A summary of AECOM's review and analysis of the site-specific environmental database report is presented below. A copy of the database report is provided in Appendix B. Please note that the dimensions of the subject property identified in the database report were modified after the database report was prepared. The current dimension of the subject property extends only up to 32<sup>nd</sup> Street and does not include the 30<sup>th</sup> Street Pier. In addition, the address identified for the terminal when the database was requested was 369 37<sup>th</sup> Street. This address is actually for one of the buildings within Industry City. Thus the database contains listings for reported environmental concerns that are not related to the subject property. These listings have been identified and removed from those environmental database listings that have been documented to have occurred on the subject property.

Based on AECOM's research, the subject property is not located on or within a one-mile radius of tribal lands.

#### 5.3.1 Subject Property

The subject property is identified on the NY Spills, Resource Conservation and Recovery Act (RCRA) Non-Generators (NonGen)/No Longer Regulated (NLR), MANIFEST, Facility Index System (FINDS), Enforcement and Compliance History Online (ECHO), UST, and RCRA Corrective Action

Sites (CORRACTS) databases reviewed for this assessment. The spills listings were identified as follows:

- **39<sup>th</sup> Street Marine Terminal/UPS** (EDR ID A3) – A spill of mustard oil was reported on May 17, 1988 (Spill #8801529) on the 39<sup>th</sup> Street Pier as the package was broken and the employees were overcome with fumes. The spill was remediated and the case was closed the following day.
- **Brooklyn Marine Terminal EDC-DDC** (EDR ID 24) – USTs being removed from the site (location not identified) encountered impacted soil around the tanks and pumps. The spill was reported in March 1999 and closed in April 2005 (Spill #9714188).
- **Brooklyn Marine Terminal EDC-DDC** (EDR ID A5) – This spill (Spill #9714190) may be related to the Brooklyn Marine Terminal spill listed above that was reported in March 1998 as part of quarterly ground water monitoring as part of the removal of USTs. Based upon the results of sample results, a No Further Action letter was issued and the spill was closed in July 2005.
- **Gowanus Bay** (EDR ID 4) – A discharge of raw sewage was reported into Gowanus Bay at the subject property on August 30, 1996. The spill was reported at 33<sup>rd</sup> Street and First Avenue (Paper Street inside terminal property). The spill was reported closed on the same day.
- **33<sup>rd</sup> & 2<sup>nd</sup> Avenue** (EDR ID D26) – A pier identified near 33<sup>rd</sup> Street and Second Avenue collapsed on November 11, 1996 resulting in cars being buried in the collapse. Petroleum sheens were observed in Gowanus Bay and the US Coast Guard was on the scene. The spill was closed on the same day as the incident.
- **39<sup>th</sup> Street & 2<sup>nd</sup> Avenue** (EDR ID H45) – A diesel fuel tank from a truck ruptured and spilled approximately 300 gallons of fuel, of which 20 gallons may have entered a storm drain. This spill (Spill #0502776) took place in June 2005 and the case was closed in August 2005.
- **New York City Transit** (EDR ID F89) – A release of six gallons of hydraulic oil took place in June 2001 from a crane and the case was closed in December 2002. This spill took place at 36<sup>th</sup> Street and 2<sup>nd</sup> Avenue. This release may have been located at the subject property; however, location information is not sufficient to determine the exact location.

The following non-spills listings were also identified for the subject property:

- **International Term Operating Co. Inc.** (EDR ID A21) – This facility was identified as 1-39<sup>th</sup> Street Terminal and was listed on the RCRA NonGen/NLR and MANIFEST databases in association with the former generation of ignitable and corrosive wastes. No violations were associated with these listings. This facility may have been located at the subject property; however, location information is not sufficient to determine the exact location.
- **NYNEX** (EDR ID B27) – This facility at 2<sup>nd</sup> Avenue and 37<sup>th</sup> Street was listed on the MANIFEST database in association with the generation of lead waste in 1995. This facility may have been located at the subject property; however, location information is not sufficient to determine the exact location.
- **Department Ports International Trade & Comm** (EDR ID G32) – This facility was identified at 39<sup>th</sup> Street between 1<sup>st</sup> Avenue and the river was listed on the RCRA NonGen/NLR database in association with the former generation of PCB wastes with recordkeeping violations in 1994. This facility may have been located at the subject property; however, location information is not sufficient to determine the exact location.

- **Con Edison** (EDR IDs H43, H46, H48, H49, H50, H51, H52, and H53) – These listings may be associated with the substation in the southern portion of the subject property (the location information is not sufficient to determine exact location); however, they are likely located off-site to the southwest of the subject property as additional similar Con Edison listings are present in this area. These Con Edison listings are identified on the RCRA NonGen/NLR, FINDS, ECHO, and MANIFEST databases in association with the former generation of hazardous wastes with no reported violations.
- **South Brooklyn Marine Terminal** (EDR ID I101) – This facility is identified at the foot of 39<sup>th</sup> Street and 1<sup>st</sup> Avenue and is listed on the UST database in association with the removal of five 4,000-gallon diesel steel/carbon steel USTs, two 550-gallon gasoline steel/carbon steel USTs, and one 550-gallon used oil steel/carbon steel UST. The USTs were removed in 1998. The locations of these USTs and the dates which they were installed were not available.

The subject property was also listed at an orphaned site under the name Northeast Marine Terminal Co located at the Foot of 39<sup>th</sup> Street. The terminal was identified on the RCRA NonGen/NLR and CORRACTS databases in association with the former generation of hazardous waste. The facility received written informal notices of violation in 1985 which were brought into compliance in 1987.

### 5.3.2 Surrounding Sites

According to the environmental database report, numerous (over 400) sites were identified within their respective ASTM and/or EDR search distances from the subject property. Based on AECOM's review of the database listings, none of these sites are expected to present a REC to the subject property based on their distance from the subject property, regulatory status (i.e. closed, no violations found), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient). Based on the type of listings and the proximity to the subject property, the following sites are discussed in additional detail:

- **Davidson Pipe Supply Company Inc.** (EDR ID T171), at 990 3rd Avenue, was located adjacent to the southeast of the subject property (across 2nd Avenue) and is identified on the NY LTANKS and MANIFEST databases. According to information provided in the EDR report, two 4,000-gallon USTs were discovered to be leaking at this property when three USTs were removed from the property (the date of removal was not included). This case reportedly remains open and is assumed up-gradient of the subject property. However, no soil or groundwater contamination has been documented at this facility. AECOM also searched the NYSDEC online databases and no additional information regarding this site was available. Based on the lack of information and assumed up-gradient location, this facility is not considered a REC at the subject property.
- **FGP Bush Terminals** (EDR ID G85), at 148 39<sup>th</sup> Street, was located adjacent to the southwest of the subject property (across 39<sup>th</sup> Street) and is identified on the NY Leaking Storage Tanks (LTANKS) database in association with the release of approximately 100 gallons of #4 fuel oil during the transfer of the fuel from one tank to another. The release took place in February 1996 and the case was closed in February 2003. Based on the limited volume of the spill and the fact that the case was closed, this release is not anticipated to present a REC at the subject property.
- **Federal Office Building Power Plant/Bush Terminal #1/US GSA/GSA Commercial Building/US Food and Drug Administration** (EDR IDs L174-L180) are listed at 850 Third Avenue, located approximately 575 feet northeast of the subject property is identified on the UST, AST, RCRA NonGen/NLR, PCB Activity Database System (PADS), MANIFEST, LTANKS, SPILLS, and RCRA Conditionally Exempt Small Quantity Generator

(CESQG) databases. Based on information from the EDR report, five fuel oil USTs (four 20,000-gallon and one 1,100-gallon) and one gasoline UST (20,000-gallon) which were installed between 1930 and 1960 were closed in place in 1994 and three fuel oil USTs were installed in 1994 (20,000 gallons each) and were closed in place in 2009. A spill of 200 gallons of fuel oil took place from a tank overflow in January 1994 and was closed the same day. Additional contaminated soil was discovered and excavated and the case was closed in 1995. Fuel contaminated soil from the former USTs was discovered (no groundwater was reportedly contaminated) and according to correspondence may have been cleaned up and the case closed. However, the closure documentation was not located. Based on the lack of groundwater contamination, this facility is not considered a REC at the subject property.

## 5.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 vapor encroachment screening (VES) as part of this assessment. This screening was conducted in general accordance with the ASTM E2600 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated October 2015. The objective of the VES was to determine if a Vapor Encroachment Condition (VEC) exists or if a VEC does not exist.

### 5.4.1 Subject Property

Due to the history of the subject property including the potential for orphan USTs, migration of contamination from historical offsite sources, impacts from the using the rail spurs within the subject property to transport cargo, and urban fill used to create the majority of the subject property including several of the current piers, the possibility exists for subsurface contamination on and in immediate vicinity of the subject property to be present. In addition, four large bulk storage ASTs were present at the subject property in the 1940s and 1950s. Poor housekeeping and staining was also observed at the subject property within and around the two temporary structures, staining was observed in the vicinity of an abandoned transformer which was labeled as containing PCBs, and a leaking hydraulic compactor was observed. AECOM also observed a potential UST behind the temporary buildings, an inaccessible subsurface vault located inside the garage portion of the Tower Building, and potential hydraulic lifts for three loading docks at the J2 Building. Based on these observations and historical information, a VEC is likely to exist at the subject property due to an on-site source.

### 5.4.2 Off-site

To conduct the VES of the nearby area, AECOM conducted a detailed review and analysis of the site-specific environmental database report with particular focus on the follow two types of sites:

1. Off-site properties that are impacted by chlorinated volatile organic compounds (VOCs) and/or semi-volatile-organic compounds (SVOCs) and are located within approximately 1,750 feet of the subject property, and
2. Off-site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the subject property.

The following paragraph summarizes the results of AECOM's VES of the nearby area.

A review of the site-specific environmental database indicates that no chlorinated VOC/SVOC and two petroleum hydrocarbon impacted sites are located with the above-described radii of the subject property. However, numerous sites with petroleum spills or tank overfills/releases that do not have

confirmed soil or groundwater contamination are present within 525 feet of the subject property. All of these sites can be ruled out due to their regulatory status (i.e. regulatory closure has been issued), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient), with the exception of the Davidson Pipe Supply Company Inc. discussed in Section 5.3.2. In addition, the subject property vicinity has historically been used for industrial purposes and facilities which were present prior to current environmental regulations may not be captured in the EDR database report. Based on this information, it is AECOM's opinion that a VEC may exist at the subject property due to an off-site source.

## 5.5 Agency File Review

### 5.5.1 Local

AECOM reviewed online information on the New York City Department of Finance and Department of Buildings websites. This information is incorporated throughout this report as appropriate.

AECOM submitted Freedom of Information Act (FOIA) requests to the NYCDEP and FDNY. As of the date of this report, responses to AECOM's FOIA requests to either agency have not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from this agency to our FOIA request will significantly alter the conclusions or recommendations of this report. However, if information is received from this FOIA request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

### 5.5.2 State

In addition, AECOM submitted a FOIA request to the NYSDEC and the NYSDOH. As of the date of this report, responses to AECOM's FOIA request to either agency have not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from this agency to our FOIA request will significantly alter the conclusions or recommendations of this report. However, if information is received from this FOIA request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

AECOM also reviewed the following databases, in addition to those identified in Section 5.3.2:

- New York State Department of Environmental Conservation, Bulk Storage Database Search. The subject property was identified in the database with four spill numbers (0714187, 9714188, 9714189, 9714190) related to unknown petroleum in the soil. All four spill numbers were issued on March 20, 1998 and closed on January 14, 2015.
- New York State Department of Environmental Conservation, Spill Incident Database Search. The subject property was not identified in the database.

### 5.5.3 Federal

AECOM searched the U.S. EPA's Envirofacts and Superfund Enterprise Management System (SEMS) online databases. The SEMS database replaced the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) which has since been retired. SEMS includes the same data fields and content as CERCLIS. The Envirofacts database retrieves information obtained from 17 national systems, including the CERCLIS, Superfund program (NPL sites), hazardous waste sites, and potential hazardous waste sites. The subject property was not listed on either the Envirofacts or the SEMS databases.

## 6. Findings and Opinions

AECOM performed a Phase I ESA of the subject property in conformance with the scope and limitations of ASTM Practice E 1527-13, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

The following sections summarize the findings and opinions of this Phase I ESA of the subject property.

### 6.1 Recognized Environmental Conditions

Based on the above-described activities, the following REC was identified in connection with the subject property:

- Due to the history of the subject property, the potential for orphan USTs and historic urban fill used to create the majority of the subject property including several of the current piers, the possibility exists for subsurface contamination on and in immediate vicinity of the subject property related to the potential USTs and historic urban fill.
- According to historical research conducted by AECOM, four, 160,000 gallon aboveground bulk storage tanks were located in the area of the current N Shed between 1940 and 1953. Information concerning the decommissioning of these tanks and the removal of any impacted soil resulting from the operation of these tanks was not available. Therefore, the historic operation of these four tanks is considered an REC.
- A brass cap was observed imbedded within a concrete pad surface in the rear of the two temporary structures. Based upon AECOM's professional judgement, the presence of the brass cap and the concrete pad suggests the possible presence or former presence of an underground storage tank or other structure. Although there is no staining or other visible evidence of a release of any kind, the brass cap and possible underground tank is considered a REC for the subject property.
- An abandoned transformer labeled as containing PCB fluids was present along the northern portion of the Tower Building in an area that was gated and inaccessible. Staining was observed in the vicinity of this abandoned transformer (approximately 15 square-feet); however, AECOM was unable to determine if the staining was water or transformer oil. Until a detailed inspection and evaluation can be made, this staining is considered a REC at the subject property based on the labeling of the transformer as containing PCBs and the existence of the stain.
- Based on AECOM's professional judgement, observations made at the subject property and historical information suggest the possible presence of a Vapor Encroachment Condition (VEC). Although there are currently no structures on the property, the REC listed herein has the potential to include open vapor intrusion exposure pathways during future development or construction at the property. This potential VEC is considered a REC.

### 6.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the subject property.

### 6.3 Historical Recognized Environmental Conditions

Based on the above-described activities, the following HRECs were identified in connection with the subject property.

- USTs were removed from the subject property in March 1999 (location not identified) when impacted soils around the tanks and pumps were encountered. The spill was closed in April 2015.
- The subject property was identified in the database with four spill numbers (0714187, 9714188, 9714189, 9714190) related to unknown petroleum in the soil. All four spill numbers were issued on March 20, 1998 and closed on January 14, 2015.

### 6.4 De Minimis Conditions

The following DMCs were identified in connection with the subject property:

- Areas of de minimis soil staining (approximately 5 feet by 10 feet) were present throughout the subject property. The majority of the sources of these minor leaks could not be identified due to the age and use of the subject property, but are likely related to motor fuels and hydraulic fluid and poor housekeeping practices observed.
- A leaking hydraulic trash compactor was observed located along the southern wall of the larger temporary structure which contained de minimis staining (approximately three square feet).

## 7. Conclusions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-13 of a portion of the property identified as the South Brooklyn Marine Terminal (SBMT) located along Second Avenue between 33<sup>rd</sup> and 39<sup>th</sup> Streets, Brooklyn, Kings County, New York, the subject property. Any exception to, or deletions from, this practice are described in Sections 1.3 through 1.5 of this report. This assessment has revealed no evidence of RECs or controlled RECs (CRECs in connection with the subject property with the exception of the following:

- Due to the history of the subject property, the potential for orphan USTs and historic urban fill used to create the majority of the subject property including several of the current piers, the possibility exists for subsurface contamination on and in immediate vicinity of the subject property related to the potential USTs and historic urban fill.
- According to historical research conducted by AECOM, four, 160,000 gallon aboveground bulk storage tanks were located in the area of the current N Shed between 1940 and 1953. Information concerning the decommissioning of these tanks and the removal of any impacted soil resulting from the operation of these tanks was not available. Therefore, the historic operation of these four tanks is considered an REC.
- A brass cap was observed imbedded within a concrete pad surface in the rear of the two temporary structures. Based upon AECOM's professional judgement, the presence of the brass cap and the concrete pad suggests the possible presence or former presence of an underground storage tank or other structure. Although there is no staining or other visible evidence of a release of any kind, the brass cap and possible underground tank is considered a REC for the subject property.
- An abandoned transformer labeled as containing PCB fluids was present along the northern portion of the Tower Building in an area that was gated and inaccessible. Staining was observed in the vicinity of this abandoned transformer (approximately 15 square-feet); however, AECOM was unable to determine if the staining was water or transformer oil. Until a detailed inspection and evaluation can be made, this staining is considered a REC at the subject property based on the labeling of the transformer as containing PCBs and the existence of the stain.
- Based on AECOM's professional judgement, observations made at the subject property and historical information suggest the possible presence of a Vapor Encroachment Condition (VEC). Although there are currently no structures on the property, the REC listed herein has the potential to include open vapor intrusion exposure pathways during future development or construction at the property. This potential VEC is considered a REC.

## 8. Environmental Professional Statement

*Mr. Abrams was the Environmental Professional (EP) for this project. Mr. Abrams' EP statement is below and his resume is provided in Appendix C:*

*I declare that, to the best of my professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.*

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### **STANDARD ENVIRONMENTAL RECORDS**

#### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/11/2017 has revealed that there are 5 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

#### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

<b>DEBEVOISE CO</b>	<b>74 20TH ST</b>	<b>ENE 1/4 - 1/2 (0.404 mi.)</b>	<b>403</b>	<b>954</b>

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 11 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 12 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/15/2017 has revealed that there are 9 NY SHWS sites within approximately 1 mile of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 09/25/2017 has revealed that there are 5 NY SWF/LF sites within approximately 0.5 miles of the target property.

### **State and tribal leaking storage tank lists**

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 10/31/2017 has revealed that there are 54 NY LTANKS sites within approximately 0.5 miles of the target property.

### ***State and tribal registered storage tank lists***

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 20 NY UST sites within approximately 0.25 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS UST site within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 4 NY CBS AST sites within approximately 0.25 miles of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 99 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites

## EXECUTIVE SUMMARY

on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 4 NY HSWDS sites within approximately 0.5 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### **EDR Exclusive Records**

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
KINGS COUNTY WORKS	55TH ST. AND 1ST AVE	SW 1/2 - 1 (0.769 mi.)	BH431	1092

BU-METROPOLITAN MGP	124-136 SECOND AVE	NE 1/2 - 1 (0.879 mi.)	BI436	1098

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was KOLLEENY TRANSFERRED TO I. ISLAM 4/27/05- The site is under remediation by O'Brien-Kreitzberg (OBK). Reviewed the quarterly monitoring report (Oct.-Dec./04). There are only 2 groundwater monitoring wells (MW-B-04 & MW-D-05) under quarterly sampling. Sampling results from well MW-B-04 exhibited no exceedances of VOCs and SVOCs in three consecutive events and as such will be dropped from monitoring. The other monitoring well was not accessible during last two sampling events due to construction materials being stored over the well. However, effort is being made for sampling this well in the forthcoming quarterly event. No Free Product was observed in any of the monitoring wells. - II 7/6/05- Reviewed the monitoring report dt. May 24, 2005 where URS has presented the latest (Mar./05)GW sampling compliant results from the lone monitoring well MW-D-05 and requested for the Spill Closure . Based on the presented data and URS's request, the spill case is closed and NFA letter issued. - II."

Remarks: "DEC WAS ALREADY ON SITE - UST REMOVALS BEING DONE ON SITE - SPILLAGE FOUND AROUND TANKS AND PUMPS"

"Spill on the deck of a barge which is docked at the US Power Gen site on 2nd Ave. Spill from a diesel tank on the ship deck spilled into New York Harbor. Coast Guard was called. They are trying to determine how big the spill really is. They originally thought the spill was contained, but now unsure. Ken's Marine responded to the site same day and cleaned up with a sweep. Sweep left in the water over night. Next morning no sheen. spill closed. "

"9/4/12-Vought-Primary off hours responder. Called and spoke to Dan Lachman (US Power Gen Ph:516-790-0417) and he noted that a pier containing a fuel line collapsed resulting in a release of fuel oil to Gowanus Canal. Dan noted that fuel line was only used during

**S111065197**

winter and that the line was not grossly leaking and that slight bend in line was initially causing a spray of diesel fuel to be released. Dan noted that line was isolated from tank thus limiting source and that product was present on gravel adjacent to a bulkhead on the canal. Dan noted that the facility had permanent boom in place and had also called and mobilized Clean Harbors to deploy additional boom. Dan noted also that that spill affected a 5'x 5' area of gravel adjacent to the bulkhead and that they will begin recovery of impacted gravel and expect the cleanup to be completed by nighttime. Dan also noted that at no time had any sheen or product had exceeded boom limits. Dan also noted that no free product was observable. Vought called RSE who gave notice to have secondary responder (DEC Zhune) perform site visit. Vought called and spoke to DEC Zhune and informed her of same. Later during the day Vought received a phone call from DEC Zhune and Vought spoke to onsite representative who was looking for DEC approval to begin emergency removal of impacted pier. Removal of pier was necessary to inspect for possible diesel impacts along shoreline adjacent to bulkhead. Vought provided authority for emergency removal (and also received concurrence from RSE on same) however also noted to representative that DEC Cryan must be immediately notified Tuesday (9/4) to ensure compliance upon that time with DEC Permit requirements. Vought also instructed DEC Zhune to call and notify RSE of same. 09/04/12-Zhune spoke to Natalia Hernandez Environmental Engineer at US Power Gen. She said cleanup was completed. 09/04/12- Natalia sent the following email. The Gowanus Generating Station (GGS) fuel oil pier incurred structural damaged on Friday, August 31, 2012. Immediately, the Gowanus operators initiated the site s Facility Response Plan, which includes securing the generating units, isolation of fuel lines and reporting to the pertinent environmental agencies. During this event, a minor amount of fuel oil, Ultra Low Sulfur Diesel, was released into the waterway but contained by permanent boom, in place to secure any accidental releases from reaching the Gowanus Bay. Notifications were also made to the Company s Oil Spill Response Organizations (OSROs), Kens Marine, Miller Environmental Group and the Clean Harbors Cooperative. These contractors supported the removal of loose floating debris in the waterway, the cleanup of impacted blue stone and the evacuation of fuel oil from the submerged fuel oil header. A marine construction contractor retrieved the submerged section of fuel piping eliminating any safety and environmental concerns. Records of waste disposal generated during the response, will be provided to the Department no later than September 14, 2012. GGS will perform the necessary repairs to the damaged pier and associated structures before resuming normal operations. "

Remarks: "Unknown amount of Ultra Low Sulfer diesel spilled from a leaking cargo line. Cleanup crew is enroute. Crosses of 29th/2nd"

DEC Memo:

"6/10/14-Zhune spoke to Daniel Lachman 516-790-0417. He said they saw a sheen while doing inspection around the site in the morning. They have a permanent boom. They saw the sheen outside the permanent boom. 6/10/14-Daniel sent photos and the following email As requested, attached are photos of the sheen for Spill No. 1402573. Upon finding this sheen outside of our site s permanent containment boom a full site investigation and walk down was performed to ensure that the sheen was not emanating from our facility. After determining that the sheen was not coming from the facility, it was decided to report the sheen as a Third Party to the NYSDEC. Unfortunately, the source cannot be determined, however it appears to be coming from the Gowanus Canal. 6/10/14- Zhune called the Coast Guard and spoke to Coast Guard Colon. He said the Coast Guard Pollution Response team is also mobilizing to the site to do an inspection as well. 6/10/14-As per Randy Austin the sheen is likely coal tar sheen from sediments buried in the Canal. Spill Closed. 6/11/14-Daniel sent the following email To follow up on the voicemail that I left earlier, attached are two (2) photos showing that the sheen outside of our boom is completely gone. The entire site has been walked down and no other sheen is present. "

 DEC Memo: "12/10/12 TJD T/C with Dan Lachman of US Power Gen. Operator discovered a light sheen on Gowanus Bay this morning and reported spill. Subsequent investigation by facility personel revealed a loose deck valve on barge - the valve was closed and discharge was stopped. Facility operator called in Ken's Marine (OSRO Contractor) for depolyment of sweep inside containment boom that is maintained around barge at all times. At the time of arrival of Ken's Marine the sheen had already disipated and was urecoverable - estimated volume of

Contact Name: NADIRA BASDEO  
DEC Memo: "9/12/17-Zhune spoke to Nadira Basdeo. Nadira said while excavating to make bulk head repairs, an abandon storage tank was discovered. They found a mix of water, sediment and oil inside the tank. The soil around the tank was found discolored. 9/12/17-Nadira Basdeo sent the following email. During some construction activities at the Gowanus Generating Station, we discovered an unknown abandoned tank, buried near the water. As we began to dig out the tank, we noticed some

S118461472

discoloration of the soil around the tank. We called in Ken s Marine to put up boom around the area and we have built a little soil berm around the tank to prevent water from covering it up. When possible, we opened a hatch on the tank and began draining the contents using a vacuum truck. We are still draining the tank, with the intent of cleaning it prior to resuming soil removal. (VZ) 9/14/16-Nadira Basdeo sent the following email. Yesterday we were able to remove the remaining contents and flush the walls of the tank, in preparation for cleaning today. We hope to have the tank cleaned and filled with either cement or clean sand, at which point we will continue soil removal to the concrete foundation the tank is encased in. In the attached photo, you can see the discovered tank, along with the berm we created to keep the tide out. 9/23/17-Nadira Basdeo sent the following email. The discovered abandoned tank has been cleaned, vapor-freed and filled with a concrete mixture. We are now proceeding with soil removal down to the exposed concrete foundation of the tank. Upon completion of soil removal and disposal, I will provide records of the total amount of material disposed of. (VZ) 9/26/17-Nadira Basdeo sent the following email As discussed with Natalia via phone this morning, the tank we discovered is partially encased in a concrete foundation. We are removing all exposed soil down to the concrete pad, including that used to create the berm shown in the attached photo. Surrounding soil, as well as the concrete slab are under water. Given these conditions, endpoint sampling is not applicable. Additionally, in the process of draining, cleaning and filling the tank, there were no holes or cracks found, and the integrity of the tank seemed to be intact. (VZ) 10/19/17-Nadira Basdeo sent the following email-Attached, please find the Closure Request for Spill No. 1705744, associated with the discovery of an unknown abandoned tank at the Gowanus Generating Station. The document describes the discovery, cleanup and closure activities, and includes photographs. Spill Closed. "

Remarks: "impacted soil located during excavation. abandoned tank also located" Not reported

DEC Memo:	"3/11/14: Mahat T/C : DEC contacted Ms. Natalia Hernandez ( USPOWERGEN @ 718.204.3918) inquiring more about the spill. It was notified that the leak has been stopped and the spill on the surface water has been contained inside the implimented boom. Milro and KenMarines repsonded to the site for deleniation and clean up. Ms. Hernandez will supply more information once the clean up is done. Case is assigned to DEC Demeo for further investigation. 9/15/14: Mahat Case is reassigned to DEC Mahat as per DEC DeMeo. An email is received from Mr. Dan Lachman from USPOWERGEN which narrate the procedure to fix the issue that caused the spill in forst place. Email is listed below : Good morning, To follow up on our phone call, the response to Spill No. 1311529 was completed shortly after the spill was found and the NYSDEC notified. On March 11, 2014, at approximately 11AM, a sheen was detected in the waters at Gowanus Generating Station. A skiff was deployed to investigate the sheen and check the piping under the pier. The entire pipe system below the pier was traced out and a ULSD leak was found on the GT 3 and 4 supply line at 1120. Ken s Marine was immediately contacted to deploy soft boom, sweep, and sausages. The facilities crew began deploying sweep and sausages between GT 3 and 4 finger piers and along the inside portion of the site s permanently deployed boom system. A

**GOWANUS GENERATING STATION (Continued)**

**S116553393**

vacuum truck was ordered from Miller Environmental to vacuum out the supply line. The line was then isolated by closing two gate valves, then the concrete pad beneath the pipe was covered with absorbent pads to clean up the spilled product. A pipe wrap was brought in from the Astoria Station to temporary seal the leak. While the temporary wrap was being installed, Miller Environmental drained product from the line, 660 gallons were removed. To prevent future spills, two sections of piping have been replaced with new piping, coated with an epoxy protective system, and then wrapped with marine piling tape. I have attached two photos showing the location of the leak and the replaced piping with the protective wrap. The epoxy coating system and wrap are both designed to provide protection in marine environments, specification sheets are attached. It is respectfully requested that the NYSDEC close out Spill No. 1311529. Please let me know if you require any additional information. Regards, Dan Lachman Environmental Engineer USPOWERGEN Astoria Generating Company, L.P. 516-790-0417 Cell 718-832-3926 Desk 718-499-6537 Fax Based on the information provided Mr. Dan Lachman, no further investigation is required by the Department. Remediation and delimitation of the spill case is all completed and the spill was stopped and permanent measure was taken to stop the future potential spill. Hence, the spill case will be close in the DEC database. "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL 1/18/96: Glen Katz spoke with Ron Santapaola, Con Ed - sheen between barges, boom in place. Sheen dissipated as of 1425 hrs. Divers are to investigate futher, will inspect barge for source. Divers en route as of 1425 hrs. UPDATE: divers found no source but collected sample for analysis possibly from sheen. 1/24/9, Engelhardt notes: Call from Lisa Primeggia, Con Ed - divers inspected bottom of canal, saw nothing. Avery Tom is Con Ed Environmental Affairs person assigned to case. Note: this burping up of oil occurred last on 11/27/95 (see spill #9510745). Call Al Fillipi, Con ed to find out if this happens a lot. 3/21/02: Information provided by Orion Power New York indicates this storm drain was sealed on or about July1, 1996. No recurrences of sheen emanating from the storm drain have been noted since then. (JHO) "  
Remarks: "LIGHT OIL BUBBLING UP FROM BOTTOM OF CANAL. DRIVERS ENROUTE TO INVESTIGATE FURTHER. 10'X10' SHEEN. ABSORBANT BOOM IN PLACE. NRC ALSO NOTIFIED. FURTHER TO FOLLOW."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL 8/21 - JHO RESPONDED WITH AVERY TOM OF CON ED. BILGE AREA OF TWO FLOATING GAS TURBINES OVERFLOWED DUE TO HEAVY RAINS. OIL/WATER SEPARATOR COULD NOT HANDLE THE VOLUME. BILGE WATER LEAKED FROM FOUR SPOTS: TWO ON EACH BARGE. COAST GUARD RESPONDED EARLY IN THE MORNING, ISSUED FINDINGS AND RECOMMENDATIONS TO MAKE REPAIRS TO FLANGE WELDS ON THE BARGES. ACCORDING TO CON ED, CONTRACTOR (S&D) TO PUMP DOWN WATER LEVEL IN BILGE TO ALLOW WELDERS TO WORK ON WELDS. SILVER SHEEN IS CONTAINED WITHIN BOOMED AREA, ALTHOUGH COAST GUARD REPORTED THAT A SHEEN WAS VISIBLE IN GOWANUS BAY - IT COULD BE ATTRIBUTED TO ANOTHER SOURCE. IMPACT TO WATER APPEARS MINIMAL. "  
Remarks: "caller stated rain has washed oil from deck."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was RODRIGUEZ 31-JUL-2001 14:40 HRS. REPORTS: WHILE P.SUDOL WAS ON LOCATION FOR INSPECTION WITH THE DEC HE FOUND: APPROX. 4 OZ OF TRANS FDR FLUID ON TO A SUPPORT BEAM THEN ON TO BLUE STONE IN CIRCULATION PLANT # C2 FROM OIL PUMP SEAL. EQUIPMENT IS DRIPPING APPROX. 1 DROP EVERY 10 MINUTES. SPILL IS NOT CONTAINED. NO SEWERS OR WATER WAYS AFFECTED. CLEANUP PENDING REPAIR. CONTAINER PLACED UNDER LEAK FILLED WITH OIL ABSORBENT UPDATE 31-JUL-2001 17:20 HRS. ASPER AN E-MAIL FROM M.ROSA : 13:48 hours During a DEC inspection of the Gowanus Substation, it revealed that within Cooling Plant C2, there was a minor oil leak from the Oil Motor / Pump #01 seals. Apparently through vibration of the motor the catch pan shifted slightly causing a leak of approximately four ounces of oil onto the bluestone. The pan was immediately reposition and consultations were in progress due to a previous E2MIS work order on that piece of equipment. 16:45 hours. Two catch pans placed beneath the Oil Motor/ Pump # 01. The support structure of the pump has been cleaned and the oily bluestone removed. A 5 gallon pail was created and labeled oily debris from CP 02. The drum identification number and the proper labels need to be applied. UPDATE 8/23/04 W.O.# 0000122854 has been complete by Michael Garcia#14564 and Nesbilt Santo # 14864. Pump needs to be repaired. Another Incident Report 140211 will capture the repairs on pump. This incident # will be closed because on inspection found two incidents for the same problem."  
Remarks: "4 oz spilled - clean up pending crew arrival spilled to bluestone & a support beam - no smoke/fire/private property con ed none at this time - - - -this is a NON pcb spill"

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL 2/7/05: Con Ed submitted copy of original notification letter to DEP, which states: Location of Release: Vault No. 2020 on south side of 39th Street, 51 ft. West of 2nd Avenue, Brooklyn. Name of Substance Release: Transformer Oil (170ppm PCB). estimate.d Qua!jtiv of Substance Release: Approximately 2 gallons of oil. Total PCB <0.01 lb. Description of Areas Affected by Release: Transformer vault, possible entry of PCB oil into tine leading to sewage treatment plant. Con Ed inepcted vault in August 2004 and found no evidence of contaminant. Close out. (JHO)"

Remarks: "transformer bottom is porous and leaked product into vault - 170ppm drain in vault - drain is clogged with oil absorbant - drain goes to a pollution plant"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name:	JAMES CRESSY
DEC Memo:	"12/22/14-Vought-Spill assigned to DEC Feng as she is working on adjacent site with PCE impact as well as submitting a P-Site memo to RHWRE. Feng to return call to Cider Enviromental. 12/22/2014 - Feng - Spoke to Jame Cressy of Cider Environmental (631-616-4000 x101, JCressy@CiderEnvironmental.com). The building is for commercial use including office, firm studio (all digital), car wash, food go-car shop. The property owner is doing refinance and hired environmental consultant to do a Phase 1 and found that it has been used for carpet cleaning from 1910s to 1990s. Phase 2 has been performed too. GPR was done and found no tank. They have installed soil borings and screened the soil from 5-20 feet with PID. The PID reading is not that high. Sampled soil, found some semi-VOCs below CP-51. Groundwater from these soil borings did not show exceedances. There is a basement for storage, takes up only 10% of the building footprint, it is well ventilated. They opened the basement slab, the basement is at 14 feet, and encountered groundwater right at 14 feet too. They collected the groundwater and found hits of PCE. The maximum level is 52 ug/L. Received Phase 2. 12/30/2014 - Discussed with Jane O'Connell of Section A. She has concerns about the validity of the groundwater samples due to the groundwater seeping out from the borehole when the slab is penetrated. Instead of updating the previous P-Site memo,

**PCE IN GROUNDWATER (Continued)**

**S117394005**

this new information will be provided to her. 1/5/2015 - reviewed Phase 2 report: Cider Environmental was hired by BBCN Bank to complete a Phase 2 investigation. The site has been used for carpet cleaning, carpet refinishing, carpet dyeing since at least 1910s to 1990s and auto repair since at least 2002. It is currently maintains a partial 3-story structure (with partial basement), utilized as a car wash, offices and film studio. Based on the investigation, the soil at this site is brown medium to fine sand with some gravel from grade to 20 feet bgs. The regional groundwater flow is toward to the west. Groundwater was encountered immediately below basement slab (about 10 feet bgs). A limited GPR survey has been conducted and the data collected from the survey could not identify any anomaly that can be interpreted as representing any USTs. Please note that due to large volume of storage in the area, the entire floor could not be surveyed. Three soil borings SB-1 to SB-3 were installed and three soil samples were collected. The soil sampling results show that no VOCs has been detected in all soil samples. The detection of SVOCs in SB-1 (5-6') are still below Part 375 Unrestricted SCO. Four groundwater samples were collected from the site including two from SB-1/GW-1 and SB-2/GW-3 and two from the basement GW-2 and GW-4. Please note that the when concrete slab in the basement was penetrated, groundwater seeped out from the bore hole and groundwater was observed to be seeping out from a crack on the concrete slab in the basement during the investigation. Please review the Phase 2 report to determine the validity of the groundwater samples and to see if additional samples are warranted to verify the findings. No soil samples could be collected from the basement area either. The cVOCs compounds, i.e. PCE and its daughter products at levels above the applicable guidance values. Maximum of 52 ug/L PCE and 13 ug/L cis-1,2-Dichloroethene in GW-2. Petroleum related VOCs compounds, i.e. 11 ug/L ethylbenzene and 82 ug/L xylenes. The Phase 2 report conclude that the historic carpet cleaning operation and the currently operation of the ASTs in the basement have impacted the environmental quality of the property. Specifically, groundwater in the basement area was found to be contaminated with chlorinated solvent and petroleum product related chemicals at levels exceeding the application guidance value. 1/5/2015 - Email to Jane O'Connell summarize the site information and attached the Phase 2 report, location map and groundwater sampling data for C-241156. 3/25/2015 - Email from Jane Shaun and I briefed Bob Cozzy about this site and he agreed that no further action is required by this property owner in relation to the chlorinated solvents. The CVOCs will be addressed by my section under the upgradient probable source site in the Brownfield Cleanup Program. Assuming you have no other petroleum issues, you can close this spill and send the spill closure letter to the owner. 4/22/2015 - Reviewed Phase 2 report. Not much concern regarding petroleum contamination in the soil and groundwater. Petroleum related VOCs compounds, i.e. 11 ug/L ethylbenzene and 82 ug/L xylenes. No PBS records could be found. Checked with Leszek Zielinski of PBS, they need to register those tanks. According to the emails correspondences from James Cressy of Cider Environmental. The fuel oil AST, i.e. the 5K-gallon one is out of service. The owner told them it is empty and they found it is sealed shut. There was no fresh product observed on the concrete. No stain in the weeping holes around the tank. The owner stated that the staining is from the metals in groundwater. The fillport has been cut and sealed. 4/23/2015 - Email from J. Cressy. There is little to none odor in the

**PCE IN GROUNDWATER (Continued)**

**S117394005**

basement. The basement is very well vented with a large grate to the sidewalk in the west side and large opening along the north side which open year round. Spill is closed based on: 1) Three soil borings SB-1 to SB-3 were installed and three soil samples were collected. The soil sampling results show that no VOCs has been detected in all soil samples. The detection of SVOCs in SB-1 (5-6') are still below Part 375 Unrestricted SCO. 2) Minor exceedances of petroleum related compound detection in groundwater, i.e. 11 ug/L ethylbenzene and 82 ug/L xylenes in GW-2 located in the (2) 500-gallon Fresh Oil AST area. No detection in the other groundwater samples. The low level of ethylbenzene and xylenes do not warranted further investigation and remediation. 3) The stain around the ASTs area were not be able to be removed. There is no fresh product, only stain according to the consultant. The fuel oil tank is out of service and the fillport is cut and sealed which suggest it is no longer a source. 4) There is little to none vapor in the basement. The basement is ventilated very well. 5) No PBS registration has been found for this site. Referred the site to PBS unit for PBS registration issue. 6) According to Jane O'Connell of Section A. They have briefed Bob Cozzy about this site and he agreed that no further action is required by this property owner in relation to the chlorinated solvents. The CVOCs will be addressed by her section under the upgradient probable source site in the Brownfield Cleanup Program. Spill is closed."

Remarks: "Lab results showed the water is contaminated. Clean up is unknown."

DEC Memo: "05/24/06-Hiralkumar Patel. Visited site on 05/23/06. Spoke to Nick. they have three large barge which in use to store fuel oil and have capacity of one million gal each. and during winter time, to prevent clogging they run oil into recirculating lines and since 2003 these lines were not being used. somehow one of this recirculating line got oil in it and leaked outside. site has permanent boom in water covring boundries. they put another boom outside of this permanent boom for precaution as this event happened. all contained. observed little sheen on water. as per Nick, initial there was 2' 8' sheen on water. spoke to emergency responder, who put boom around area. he hasn't noticed any sheen or free product in other part of area or outside the preliminary boom. Received email from DEC Jane H. O'Connell. he got email from James Gregory from Gowanus Bay.

Station. The testing started at approx 9:30 A.M. At 10:40 AM, a leak developed on the 8 inch recirculation piping segment that is directly in front of power barge GOWANUS BAY #3, near the gangway. This line is approximately 40 ft long and was out of service. The leak is located midway on the bottom of the piping that goes under the dock. This leak was timed, and approximately 3-5 gallons of distillate that could have entered the water. (It was reported as such.) A vacuum truck was ordered to evacuate the line. Absorbent materials were placed in the area adjacent to the leak. This is inside the permanent perimeter boom that is installed around the entire site. The evidence of the leak was contained and removed from the area inside the absorbent material that was immediately placed on the water. There was no evidence that any oil left the site. At this time, this piping section is being blanked off and removed. It is no longer being used for operations. It will not be replaced. Oil migrated into the line since the last test. Nitrogen used to charge the line induced the leak. The single isolation valves on both ends did not hold. This line was inspected and vacuumed free of oil in 2003. All agencies have been notified. We are working with Andy Oliver to notify the Insurance carrier. This event was reported as a Category 1 event. Agency response as of 3:00 PM: Call from USCG Sector NY Response Section. PO Callejas requested an incident report. Response sent via FAX at 3:20 PM A representative from the NYSDEC Region 2 arrived on site about 3:05 PM. Environmental Engineer Hiralkumar Patel inspected the area of concern. He said he was well satisfied and left about 3:15 PM. Submitted, Joseph Vazquez Operations Manager Office 718 499 6368 Fax 718 499 6537

DEC Memo: "5/6/2015 - Feng - Duty Desk. Talked to Brandon Nathe of Langan (212-479-5590, BNathe@Langan.com). It is a historical spill. The site is used for steel shop and possibly doing steel finishing process work. They are doing the investigation for purpose of potential property transaction. They have installed soil borings and found stain and odor. They are collecting samples now. They have installed 2 soil borings now and there are still a couple more to go. The soil borings were advanced to 13 feet and hit groundwater at 7 feet. Stain and odor were found at 7 feet. Soil samples were collected and will collect groundwater sample. The samples will be run for Part 375 whole list. The site will be possibly be applied for state/city BCP. They will finish the work today and the lab results will be available in a week or so. Not known of any future development plan. DEC need the contact information of the owner/buyer/potential developer. Email to B. Nathe for the contact information and the sampling results upon available. 8/31/15- left message for Brandon for update. 7/22/16- DEC piper sent email to Brandon requesting update."

Remarks: "Soil borings showed contamination. Clean up is unknown."

 Site Description:

**Actual:**  
**12 ft.**

Location: The site is located in an urban area, in the Gowanus area of Brooklyn. Site Features: The site is approximately 1.09 acres in size and is improved with four one-story buildings. Current Zoning and Land Use(s): This site is located in an M2-1 manufacturing district. Past Use of the Site: Past uses of the site include sulfur works; manure dump; operations and storage of various materials, including cement, asphalt, paint, cork materials, finishing and cutting; cork slab plant; iron oven; and switch house. Site Geology and Hydrogeology: Historic fill extends from the low the surface cover to depths ranging from 11 to 15 feet below ground level. The fill generally consists of brown coarse- to fine-grained sand with variable amounts of wood and brick. A layer of native organic-clay is below the fill. Bedrock is of the Middle Ordovician to Lower Cambrian Hartland Formation which consists of fine-grained quartz-feldspar granulite. Groundwater was observed at about 7 feet below ground surface and is inferred to flow northwest towards the Gowanus Canal. Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID: 344636  
DEC Memo: "4/1/08 bf: Called Harry Gelb (718)788-2600. He is not sure of why tank failed. he believes it may have been caused when the driveway was repaved. I confirmed mailing contact and address. Mr. Damast is owner of the building. Told him he can register both tanks for 2-608583 and 2-608582 under one registration since they are on same property. Address for site location for 2-608582 is incorrect and is the mailing address. I told him this needs to be corrected. Sent ttf letter to: Abraham Damast 3913 2nd Ave. Realty LLC 4312 2nd Avenue Brooklyn, NY 11232 09/05/08-Hiralkumar Patel. received call from Isaac from Eastmond. he mentioned that they did isolation test and found tank, fill line and supply/return lines tight. they found problem in vent pipe. asked Isaac to submit isolation test result. 9/8/2008 Isaac submitted a writeup listing the work done and there was no contamination found. Tank was closed in place. See attached eDocs report."

**Environmental Interest/Information System**

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL CALLBACK AT 10:59 AND LOCATION CHANGED TO NARROWS GAS TURBINES. Con ed e2mis notes: Air compressor which was being used by M&C was spilling compressor lube oil onto the deck of the barge. About 10 gallons was contained on the deck of the barge. The operator shut the compressor down and informed Supervisor Gerard Toto who organized a clean crew. Oil did not enter the waterways or sewers. At 0950 hours clean up started. At 1105 hours cleanup has been completed. "

Remarks: "compressor on barge was leaking - spill contained con ed #122982 "

**FINDS:**

Registry ID: 110000892963

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "8/15/05 - Haggerty - spoke with Kathy from Soil Mechanics (516)-221-7500 on 7/15/05. She is trying to locate the file and will call back when and if she does. All other contact info is outdated. ----requires additional info, site visit 11/22/05, SA: No PBS record found. Can not find the property records in the property shark. Address found on google. Talked to Kathy, she told me that as far she remember this spill has been closed by DEC. She will fax me a copy if found. 12/19/2005: No record found in remediation database. Spill remains open. Need to find the owner. (Sadique) 01/04/2006: As per property shark present owner is Costco Wholesale Corp. The property have multiple alternate address. (Sadique) 02/15/06 - DEC lead changed to Grathwol. Performed site visit. Davidson Pipe Supply is no longer at this address. Tenant spoke to me on the phone and gave me permission to inspect the basement of his new business. No oil fumes, basement refinished. Business is on gas heat. New slab floor, no oil stains on walls or floor. Floor drain had water in it, no oil product or sheen. New business: K.C. Products, Ltd. (Kitchen counters, moulding, etc.)"

Remarks: "COMPLAINANTS COMPANY WAS CONTRACTED TO REMOVED THREE TANKS OUT OF THE GROUND AND TWO TANKS WERE DISCOVERED TO HAVE BEEN LEAKING FOR AN UNDETERMINED AMOUNT OF TIME,BOTH TANKS HELD 4,000 GALS - TANKS HAVE BEEN REMOVED FROM THE GROUND AND CLEAN UP WILL BEGIN TOMORROW"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

"also know as 850 3rd Ave. see also 93-12153 & 94-07229. unable to reach a GSA contact. Possible remediation under 94-07229. Previous note by RDDECAND on 3/15/06 Spill transferred back to R-2 3/5/08 - Austin - Assigned to Ketani for further investigation - end 3/13/08 - Raphael Ketani. I began working on the case. Spill number 93-12153 was monitored by a former spills worker, Kerri O'Dowd. She didn't put in any case notes into the database. The spill was a 200 gal. overflow. It happened because someone had the wrong tank size. DEP was contacted at 10:30AM and GSA arrived at 2:15PM. Sand and Speedi Dri were applied to the spill. The case was closed on 1/15/94. The site address is 850 3rd Avenue, Brklyn. (29 St. & 3rd Ave.). Case 94-07229 was managed by Kerri O'Dowd. There were no case notes. Contaminated soil was discovered and was being removed as it was being excavated. She closed the case on 3/29/95. 3/17/08 - Raphael Ketani. A copy of the original August 1993 Site Characterization Report was found in the file cabinet. It was produced by Woodward-Clyde Consultants, Inc. It was prepared for Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, Brooklyn (212) 926-2878/(212) 594-2118. According to the soil analytical tables in the report, there was no significant contamination. Table 4-2 for the groundwater samples didn't list any significant contamination, either. There was a fold out site map which showed the locations of the six formerly active tanks. The PBS case is #2-601672. It shows that six tanks were closed in place on either 8/1/94 or 9/1/94. Four other tanks were installed on 9/1/94. Tank #7 is in service and tanks #8 to #10 are temporarily out of service. A note in the file that I did find said that there were records in the open file section of the storage area downstairs. I checked the file storage room, but found nothing. I also asked around in the Division of Environmental Remediation, but no one had heard of the case for the site. I checked the E-docs and found the following: The E-docs contained a transmittal letter dated 8/10/93 stating that this was the second revision of the Site Characterization Report. An estimated 2050 cu. yds of soil will be excavated and an additional 450 cu. yds. of oil contaminated soil. Tanks #3 and #4 are scheduled to be removed, along with an 1100 gal. tank. Two 20,000 gal. tanks will be abandoned in place. Groundwater remediation is not necessary based upon the analytical results. A second round of groundwater sampling will take place August 1993. The parties involved are: Woodward-Clyde Consultants (212) 594-2118 Roy Feinzig (914) 682-4895, Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, White Plains, NY, 10601 Charles Evans (718) 330-7474, Federal Building Manager, General Services Administration, Public Buildings Service, Contract Section, 26 Federal Plaza, rm. 1611, NY, 10278; GS0wP94CUC0055 A 10/4/93 E-doc note from Ms. O'Dowd states that they will install 3 new USTs. There are 6 USTs on site: 5 fuel oil (4 20,000 gal. tanks, 1 1100 gal. tank); 1 20,000 gal. gas tank. Groundwater is at 5.5' to 8.5' below grade. Nine soil borings will be done and 5 monitoring wells will be installed. MW-3G is in the area for the new UST. Groundwater is at 6' and dewatering will have to take place in order to install the new tank. USTs #3 and #4 are impacted. Fuel contaminated soil will have to be removed. A 8/9/93 E-doc note from Ms. O'Dowd states that MW-1 has no VOC hits MW-2 has less than 5 ppb MW-3G has hexane 5.8 ppb, ethylbenzene <50 ppb, xylene .50 ppb MW-6 has 3 ppb of hexane MW-9 has no VOCs There was a 10/18/94 letter from Environmental Data Consultants to the GSA requesting well installation locations and regarding the NYCFD and NYC Building Department violations.

Environmental Data Consultants, Inc., 55 Alder Street, Ste 2, South Yonkers, NY, 10701, (914) 968-1508. Dewatering took place to install the new tanks, but a SPDES permit wasn't needed as the discharge rate was below the permit lower limit and the water wasn't contaminated. Soil samples need to be taken at all of the closed tanks and the PBS record needs to be updated. The 9/6/94 E-doc note states that there is 2 to 3 of oil in MW-3G. USTs #3 to #5 are to be removed. Wells MW-3 and MW-6 need to be replaced as they were destroyed. Many of the hits in Table 1 of the analyses summary table also appear in the blanks. So these analytes can be negated. I tried to contact Charles Evans, but the phone number was not in service. I tried to reach Environmental Data Consultants, but the phone number was not in service. I tried to reach Rose, Beaton & Rose, but the phone number belonged to another company. I tried to reach Woodward-Clyde, but the phone number belonged to another company. 3/18/08 - Raphael Ketani. I found a later case from 1999 for the same site - #9908767. It involves the test failure of three 30,000 gal. tanks. Contact people were listed on the spill report. They are: Steve Ferman (718) 340-5268, at the site; John Harris (718) 965-5147 of the General Services Administration; and Tom Burke (212) 264-0800 of the General Services Administration, Technical Services, 26 Federal Plaza, rm. 1611, NY. I tried to contact Mr. Burke, but could only leave a message. I tried to contact Mr. Harris, but no one picked up. I tried to contact Mr. Ferman, but the number was no longer in service. William (Bill) De Nyse (de-nice), Senior Industrial Hygienist, (212) 264-0506 called to ask what DEC had in the way of reports and documentation for the spill case. I told him we had the August 1993 Site Characterization Report that was produced by Woodward-Clyde, a Second Revision SCR and some small letters. He asked that DEC provide him the reports as he doesn't have them. He added that he was the contact person at the GSA and that he will try to help get the case closed. Mr. De Nyse asked what should happen if he can't find the closure reports. I told him that DEC will ask that a new investigation take place. I made copies of the reports and sent them to him. 4/11/08 - Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message. His phone greeting said that he will be out until 4/21/08. I will try him then. 6/10/08 - Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message. I got ahold of Mr. Burke. He said that right now they are putting the contract out for bid. He said it will take some time in order to get a contractor lined up and get the investigation started. I told him to keep me updated. He added that Mr. De Nyse is the point of contact. 6/12/08 - Raphael Ketani. Mr. De Nyse called back. He said he is the regional engineer and the project is now being handled by a field (local) engineer at the site. The person is Rashid Mattoo (718) 254-7141 at 10 Metro Tech, Brklyn. Mr. De Nyse said that Mr. Mattoo is the contact person from now on. He added that right now they are trying to get funding to do the investigation. They have a scope of work, also. 8/12/08 - Raphael Ketani. I tried to contact Mr. Mattoo regarding the site investigation, but could only leave a message. Mr. Burke called me back. He said that the contractor has been chosen and they expect to go to contract next week. He added that they will start in a week or two. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The new case manager should probably call Mr. Mattoo or Mr. De Nyse in a week or two to find out the status of the investigation."

tank removal. - Bishop 10/30/06 Reassigned from Bishop to Sun. (MS) 12/18/06 Sun sent letter to Russel Cascardo (4001 2nd Ave Inc.) at 4001 2nd Ave, Brooklyn, on 12/14/06 requiring that the following be submitted to the NYSDEC by 1/14/07: To rectify this problem, a letter report asserting a cause of the release and summarizing the cleanup activities, observations, post-excavation sampling results (if necessary), and also including contaminated material disposal manifests or any other documentation (i.e. invoices, bills, etc.) of cleanup activities must be submitted to this office by January 14th, 2007, referencing the spill case number (see above) and the site address. (JS/MS) 3/1/07: Second letter sent (same as above) to be submitted by 4/2/07. (JS/MS) 8/6/07: All letters are being returned. Will try ACRIS to identify RP and address and if not successful, will visit the site. (JS/MS) 8/14/07: Sun/Sellberg sent another letter to Russel Cascardo (4001 2nd Ave Inc.) at P.O. Box 200825, Brooklyn, on 8/13/07 requiring the same as above be submitted to the NYSDEC by 9/17/07. This address was found on public property documents found on ACRIS website as well as Property Shark. (JS/MS) 9/18/07: Mr. Cascardo hand delivered TCR. Slight exceedences in soil samples however, no GW sample was collected even though it was noted to have a slight petrol-like odor. Will require collection of GW sample from within middle of former tank excavation area. (JS/MS) 9/28/07: Mr Cascardo believes that a sample had been collected during a seperate field inspection. MS said he had 2 weeks to submit documentation proving this. If he cannot locate report, he understands he will have to conduct another sampling event. (JS/MS) 04/07/08: 2nd SIR letter send. Due 5/2/308. (JS/MM) 05/05/08: Zeb Youngman from PWG Grosser called to notify the Department that PWG would be the consultant. Waiting for signed proposal and payment from Cascardo. (JS/MM) 06/18/08: Reviewing Subsurface Investigation/Spill Closure report. 3 MTBE hot spots (JS/MM) 07/02/08: Install 3 additional MW, implement groundwater monitoring program for a minimum of at least one year. (JS/MM) 08/05/08: Transferred to Kolleeny/Mandac. - JK 10/15/08: PWGrosser was not given permission to install additional wells by owner (JK/MM) 01/06/09: Spoke with Z. Youngman (PWGC), no work conducted on-site. Still needs permission from RP to move forward. Will need to send RP a letter. (JK/KG). 01/07/09: Letter sent to Russell Cascardo requesting work plan for supplemental subsurface investigation (3 wells to be installed and quarterly GW monitoring program implemented). SSIWP due 02/06/09. Letter sent via certified/return receipt mail. Return receipt rec'd (letter signed for on 1/12/09). (JK/KG) 01/12/09: Rec'd phone call from Zeb Youngman stating he had been given permission from RP to proceed with work. PWGC will submit the work plan. Four monitoring wells will be installed; 2 in the former UST area, 1 upgradient and 1 downgradient of the former USTs. (JK/KG) 01/20/09: Rec'd Monitoring Well Installation / Groundwater Monitoring Work Plan dated 01/19/09 from PWGC - under review. (JK/KG) 01/21/09: Work Plan reviewed. The scope of work includes installation of four monitoring wells, a groundwater elevation survey, collection of groundwater samples quarterly for one year, and submission of quarterly groundwater monitoring reports to NYSDEC. The work plan was approved with one modification; soil samples from each well location must be collected and submitted for analysis of VOCs. Approval letter mailed to RP and emailed to PWGC. The first QMR is due 3/27/09.(JK/KG) 02/23/09: On 1/27/09 rec'd phone call from Youngman stating well installation was scheduled for 2/4/09. (JK/KG) 03/11/09: Rec'd Monitoring Well Installation/First

Quarter Groundwater Monitoring Report dated 03/10/09 prepared by PWGC. Under review. (JK/KG) 03/12/09: Four monitoring wells were installed on 2/4/09. Groundwater samples were collected on 2/27/09. Monitoring well MW-2 revealed soil and groundwater contamination. Letter sent to Russell Cascardo approving PWGC's recommendation to continue with quarterly monitoring and reporting. If contamination levels do not decline significantly after 2 additional monitoring events a proposal for an active remedial approach will be necessary. Soil: MW-1, MW-3, MW-4: All VOCs non-detect or below RSCOs MW-2: 1,2,4-Trimethylbenzene 24,300 ug/kg, 1,3,5-Trimethylbenzene 6,970 ug/kg, m&p xylene 9,400 ug/kg, n-propylbenzene 2,230 ug/kg Groundwater: MW-1: MTBE (33.2 ug/L) MW-2: Total VOCs (6,465.5 ug/L), Benzene (96.3 ug/L), Ethylbenzene (1,190 ug/L), m&p-Xylene (4,000 ug/L), MW-3: MTBE (30.2 ug/L) MW-4: MTBE (1.17 ug/L) (JK/KG) 05/19/09; Rec'd a message from Zeb Youngman stating that the next quarterly monitoring event will be performed next week. (JK/KG) 06/15/09: Rec'd Second Quarter Groundwater Monitoring Report dated 6/15/09 from PW Grosser. MW-1, 2, 3, and 4 were sampled on 5/26/09. Groundwater flow direction is to the west. Text states it is easterly, although the site plan and contours indicated it is to the west. Notified PWGC of discrepancy. Groundwater: MW-1: Total VOCs (46.5 ug/L), MTBE (21.2 ug/L), Benzene (1 ug/L), m&p-Xylene (24.3 ug/L) MW-2: Total VOCs (5,057 ug/L), Benzene (165 ug/L), Ethylbenzene (1,629 ug/L), m&p-Xylene (2,340 ug/L) MW-3: MTBE 40.5 ug/L MW-4: All VOCs non-detect (JK/KG) 06/17/09: Rec'd hard copy of QMR as well as pdf of report with correction to the groundwater flow direction on page 2. Groundwater flow is westerly. (JK/KG) 08/27/09: Rec'd Third Quarter Groundwater Monitoring Report dated 8/26/09 from PW Grosser. MW-1, 2, 3, and 4 were sampled on 8/21/09. PW Grosser recommends continued quarterly monitoring and reporting. Groundwater: MW-1: Total VOCs (28.8 ug/L), MTBE (28 ug/L) MW-2: Total VOCs (2,259 ug/L), Benzene (111 ug/L), Ethylbenzene (1,020 ug/L), m&p-Xylene (642 ug/L) MW-3: MTBE 140 ug/L MW-4: 1,2,4-Trimethylbenzene (1.01 ug/L) This site should be re-evaluated for closure or further action after next QMR is submitted. Work plan submitted in 01/2009 approved quarterly monitoring for one year. (JK/KG) 11/3/09 Spill case transferred from J. Kolleeny to J.A. Maisonave. - JAM 11/4/09 Spoke to Zeb Youngman. He will submit latest GW monitoring results. - JAM 12/15/09 Reviewed Fourth Quarter Groundwater Monitoring Rpt submitted by P.W Grosser Consulting (PWGC) dated December 3, 2009. Four on-site monitoring wells were sampled on Nov. 23, 2009. Sample results show total VOC concentration of 1,250 ug/L in MW-2 (decrease in Total VOCs in well MW-2 for 4th round in a row), MTBE concentrations of 18ug/L and 170ug/L in wells MW-1 and MW-3, respectively, and VOCs were below the detection limit in well MW-4 for the fourth round in a row. MW-4 is the most downgradient well, directly downgradient from well MW-2. PWGC states that the contamination seems to be localized to the former UST area around MW-2 and is not migrating off-site. The area is primarily industrial and there is very little exposure risk. They requested spill closure. Report uploaded to eDocs. I issued a letter today stating that the spill cannot be closed at this time and that one more round of groundwater sampling should be conducted. If contaminant levels continue to decline, PWGC should perform a sensitive receptor survey to demonstrate that the residual contamination poses no threat to human health or the environment. If contaminant levels increase, then additional remedial action may be required. Letter uploaded to eDocs. - JAM 2/23/10 Received a call

**SHOW AUTO SALES -MTBE (Continued)**

**S105057879**

from Zeb Youngman yesterday. He emailed me the lab data for the last monitoring event, which showed an increase in VOC concentrations (double) in well MW-2. I issued an email and suggested that groundwater monitoring continue and a remedy should be proposed to expedite spill closure. A groundwater monitoring report will be submitted. - JAM 6/9/10 Reviewed the 1st and 2nd Quarter Groundwater Monitoring Reports submitted by P.W Grosser Consulting (PWGC) dated Feb 22, 2010 and May 28, 2010, respectively. Groundwater monitoring was conducted on February 16, 2010 and May 21, 2010. Total VOCs in well MW-2 increased from 1250ug/L in November 2009 to 2523ug/L in February 2010 to 3319ug/L in May 2010. Wells MW-1 and MW-3 have MTBE with concentrations of 5ug/L and 55ug/L, respectively. Well MW-4, which is located directly down-gradient of well MW-2, had ND levels of VOCs. PWG recommend performing one more round of groundwater sampling and if VOC concentrations increase, then the will propose either chemical oxidation or enhanced bioremediation by injecting ORC. Reports are uploaded to eDocs. - JAM 8/26/10 Reviewed 3rd Quarter Groundwater Monitoring Rpt submitted by P.W Grosser Consulting (PWGC) dated Aug 23, 2010. Groundwater monitoring was conducted on Aug 20, 2010. Total VOCs in well MW-2 decreased slightly from 3,319 ug/L in May 2010 to 3,027 ug/L in Aug 2010. Wells MW-1 and MW-3 showed increase in MTBE with concentrations of 35 ug/L and 373 ug/L, resp. Well MW-4, which is located directly down-gradient of well MW-2, had ND levels of VOCs. PWG recommend continuing groundwater sampling. Reports are uploaded to eDocs. - JAM 12/03/10: This spill case transferred from J. Maisonave to J. Kolleeny. Changed spill priority rank to P2, since GW monitoring is being performed. Received hard copy of 4th Quarter 2010 GW Mon Rpt by PW Grosser, dated 11/30/10; sent an email to Zeb Youngman of PWG requesting pdf file of rpt; he sent pdf file by email same day, in eDocs. Will review. - JK 01/04/11: Reviewed GW Monitoring Rpt - Fourth Quarter 2010 by PW Grosser Consulting, dated 11/30/10, received 12/3/10 (in eDocs). Rpt presents results of Nov. 2010 GW sampling event showing decreases in contam in several wells: MW-2 had total VOCs of 1,203 ug/L, down from 3,027 ug/L in Aug. 2010; MW-3 had 286 ug/L tVOCs, down from 373 ug/L in Aug. 2010; MW-1 had 25 ug/L tVOCs, down from 35 ug/L in Aug. 2010. Well down-gradient of worst well (MW-2), MW-4, had only minor exceedance for xylene (6 ug/L). PW Grosser recommends spill closure. I sent letter (in eDocs) to Mr. Russell Cascardo (Fleetrecovery@yahoo.com), cc to Zeb Youngman of PW Grosser, saying spill cannot be closed yet, requesting one or two more sampling events of wells MW-2 and MW-4 to confirm downward trend toward levels acceptable for closure. - JK 03/01/11: Reviewed GW Monitoring Rpt - 1st Quarter 2011 by PW Grosser Consulting, dated 2/22/11 (in eDocs). Rpt presents results of GW samples collected on 2/16/11 from wells MW-2 and MW-4, as requested in my 1/4/11 letter. Data show MW-2 had 1,193 ug/L total VOCs, down slightly from 1,203 ug/L in Nov. 2010; MW-4 was ND. PW Grosser notes that contam is not migrating off-site, and requests spill closure. I sent email (in eDocs) to Mr. Russell Cascardo, cc to Zeb Youngman of PW Grosser, stating that although contam levels appear stable and not migrating, overall levels are too high for spill closure; said DEC requires that GW monitoring (i.e., sampling of MW-2 & MW-4, gauging of all wells) continue until contam levels decrease toward concentrations appropriate for spill closure, and said if contam does not decline further by natural attenuation, some remedial action may be needed. - J. Kolleeny 06/01/11: Received & reviewed GW Monitoring Rpt - 2nd Quarter 2011 by PW Grosser

**S105057879**

Consulting, dated 5/31/11 (in eDocs). Rpt presents results of GW gauging/sampling on 5/23/11, showing increases in contam in wells MW-2 and MW-3: MW-2 had 2,462 ug/L total VOCs (up from 1,193 ug/L in Feb. 2011) and MW-3 had 769 ug/L tVOCs (up from 286 ug/L when last sampled in Nov. 2010). PW Grosser recommended continued quarterly monitoring of wells MW-2 & MW-4 to document decreasing trend in VOC concentrations and obtain spill closure. I sent email (in eDocs) to RP, Russell Cascardo, stating that quarterly gauging of all 4 site wells and quarterly sampling of MW-2, MW-3 and MW-4, should continue, noting that fluctuating VOC levels may indicate presence of residual soil contam acting as ongoing source, and that if VOC levels remain elevated or increase, remedial action may be needed to move spill toward closure. - JK 12/09/11: Sent email to Zeb Youngman of PW Grosser: Hi Zeb, I was wondering if you have any updated information regarding this spill site? Was 3rd quarter 2011 GW sampling performed? Please let me know. Zeb sent reply: 3rd quarter was not performed. I had spoken to property owner in July about potential chemox/ORC injections to close spill file. He told me to hold off on everything. I then sent email to Mr. Russell Cascardo of Fleet Recovery (RP), cc to Zeb Youngman: Dear Mr. Cascardo: In reviewing my files, I realized that I have not received a monitoring rpt for 3rd quarter of 2011 for this spill site. I contacted consultant who had been working on this project (P.W. Grosser) and was informed that all work at site has been discontinued, at your direction. As I explained in email below, sent on June 1, 2011, latest available GW data for site show levels of dissolved contamination that are too high for spill closure, and data over last several sampling events do not demonstrate a clear downward trend in contaminant levels indicative of ongoing natural attenuation processes that might bring about timely spill closure. Addtl GW monitoring is required, and if contaminant levels do not decrease, remedial actions may be necessary to expedite cleanup of spill case. DEC requires that GW monitoring (sampling and gauging of wells) resume immediately and that a rpt with up-to-date GW quality data be submitted by no later than Jan. 13, 2012. Rpt should include recommendations for further action as appropriate, based on data. Failure to comply with this requirement may result in referral of this spill case to our Office of General Counsel to initiate an enforcement action. Please confirm your receipt of this email, and feel free to contact me if you have any questions. Later that day, received email from RP, Russell Cascardo: Thank you for update, there must be a mix up, I never told anyone at that company to stop testing, I will notify them on Monday to start testing again, thank you. - JK 12/13/11: Received email from Zeb Youngman of P.W. Grosser: Jon, I have spoke with Mr. Cascardo and there had been some miscommunication on my end. We will resume monitoring program immediately. - J. Kolleeny 01/09/12: On 1/3/12, received email from Derek Ersbak of P.W. Grosser with attached pdf file of GW Monitoring Rpt for December 2011 (in eDocs). December 2011 GW data show total VOCs in well MW-2 decreased from 2,462 ug/L in May 2011 to 1,246 ug/L. GW flow map shows more northerly flow direction than previous rpts, which showed GW flow to NW. Rpt recommends spill closure. I sent email to Zeb Youngman of P.W. Grosser, cc's to Russell Cascardo of Fleet Recovery (RP) and Derek Ersbak of P.W. Grosser: I've looked over GW Monitoring Rpt for Dec. 2011 for this site. Rpt notes that total VOCs in well MW-2 (only well with significant residual GW impacts) decreased from 2,462 ug/L in May 2011 to 1,246 ug/L in Dec. 2011. Rpt says that based on continuing

**SHOW AUTO SALES -MTBE (Continued)**

**S105057879**

downward trend of VOCs in MW-2 and fact that there are no impacts in down-gradient well MW-4, P.W. Grosser recommends spill closure. I am glad to see decrease in well MW-2, but I don't agree that this represents continuing downward trend. It's true that Dec. 2011 result was lower than May 2011 result, but samples for two events before May 2011 event, collected in Nov. 2010 and Feb. 2011, both had total VOCs of ~1,200 ug/L. In fact, latest result of 1,246 ug/L (Dec. 2011) can be seen as return to levels seen in Nov. 2009, when total VOCs in MW-2 were 1,250 ug/L. In other words, it seems to me that contamination in MW-2 has plateau-ed at ~1,200 ug/L, with occasional spikes up to 2,000-3,000 ug/L. I consider total VOCs of 1,200 ug/L to be too high to consider spill closure, especially in absence of clear downward trend. Also, GW flow contours for latest sampling event do not show MW-4 as being directly down-gradient of MW-2, but suggest potential gap in down-gradient well coverage, since MW-4 is northwest of MW-2 but latest contours indicate GW flow more directly to north. I have following suggestions for helping to move this spill case toward closure: 1. For next sampling event, re-develop well MW-2 before collecting samples and see if result is lower. 2. Apply chemical oxidant to area of MW-2 using several temporary injection points advanced immediately up-gradient of well, and continue GW monitoring to see if there is improvement. 3. Excavate well MW-2 and soil in its immediate vicinity (with collection of post-ex end-point soil samples), to remove potential residual soil contam which is keeping VOC levels in that well elevated, then backfill area, replace well and conduct follow-up monitoring to see if there is improvement. It's my understanding that, although significant amount of contam soil was dug out at time of UST removal at site, GW contam was observed during tank pull (sheen and odors), but no actual GW remediation has been performed to date. Therefore, it may be appropriate to consider implementing suggestion 2 or 3. Of course, I am open to other remedial recommendations you might have. Feel free to contact me with any questions or comments. - J. Kolleeny 03/26/12: On 3/20/12, received CD with GW Mon Rpt for March 2012 by P.W. Grosser Consulting, Inc., dated 3/19/12 (in eDocs). Rpt presents GW data for 3/2/12 sampling event, plus historical data. March 2012 results show contaminant levels in worst well, MW-2, decreased significantly, with 254 ug/L total VOCs (down from 1,246 ug/L in Dec. 2011). Well MW-3 had 173 ug/L tVOCs (up from ND in Dec. 2011, but below 769 ug/L in May 2011 and 286 ug/L in Nov. 2010. Down-gradient well MW-4 was ND, consistent with earlier rounds showing ND or only traces of VOCs. PW Grosser concludes that GW contam is not migrating off-site and will naturally degrade over time. They recommend one more round of GW sampling in June 2012 to confirm that contaminant levels are remaining stable and confined to site, and suggest that request for spill closure be reconsidered based on results of June 2012 sampling. On 3/26/12, I sent email (in eDocs) to RP, Russell Cascardo, cc's to Derek Ersbak, James Rhodes and Bryan Devaux of PW Grosser, agreeing with this recommendation. - J. Kolleeny 06/20/12: Reviewed GW Monitoring Rpt - June 2012 by P.W. Grosser Consulting, Inc., dated 6/18/12 (in eDocs). Rpt presents results of GW sampling performed on 6/5/12, plus historical GW sampling data. Worst well, MW-2, had 1,230 ug/L total VOCs, up from 245 ug/L in March 2012 but consistent with Dec. 2011 result of 1,246 ug/L tVOCs. Well MW-3 had 14 ug/L MTBE, down from 173 ug/L MTBE in March 2012. Down-gradient well MW-4 was ND. PW Grosser concludes that residual contam is not migrating off site, contam has decreased from higher levels found

Remarks: when wells were first installed & sampled, and residual contam will naturally degrade over time. In addition, down-gradient properties are manufacturing-industrial, not residential - no schools, hospitals, day care ctrs, etc. Based on all these factors, PW Grosser recommends spill closure. I discussed with my supervisor Vadim Brevdo, and decided to close spill case. Issued spill closure letter (in eDocs) to RP Russell Cascardo, with cc's to Derek Ersbak, James Rhodes and Bryan Devaux of PW Grosser. - J. Kolleeny "  
"CALLER STATES THERE IS A FORMER GASOLINE STATION AND NOW IT IS DISCOVERED THAT THERE IS GAS LEAK FROM ONE OF THE TANKS. 20 YDS OF SOIL HAVE BEEN STOCK PILED SO FAR. ALL SOIL IS GOING TO BE REMOVED"

Violation Status: No violations found

FINDS:

Registry ID: 110004548730

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

CAS Number: 75092  
Federal ID: Not reported  
Tank Status: 0  
Install Date: 00/00  
Tank Closed: 03/99  
Capacity (Gal): 4500  
Chemical: Methylene chloride  
Tank Location: Indoors, Aboveground  
Tank Type: Steel/carbon steel  
Total Tanks: 0  
Tank Secret: False  
Tank Secondary Containment: None  
Tank Error Status: No Missing Data  
Date Entered: 11/13/1991  
Certified Date: 01/07/1994  
Substance: Single Hazardous Substance on DEC List  
Internal Protection: None  
External Protection: Painted/Asphalt Coating  
Pipe Location: Aboveground  
Pipe Type: Steel/iron  
Pipe Internal: None  
Pipe External: Painted/Asphalt Coating  
Pipe Flag: Painted/Asphalt Coating  
Leak Detection: None  
Overfill Protection: Catch Basin  
Haz Percent: 100  
Last Test: Not reported  
Due Date: Not reported  
SWIS Code: 6101  
Lat/Long: Not reported  
Is Updated: False  
Renew Date: 08/02/93  
Is It There: False  
Delinquent: False  
Date Expired: 11/19/93  
Owner Mark: 2  
Certificate Needs to be Printed: False  
Fiscal Amt for Registration Fee Correct: True  
Renewal Has Been Printed for Facility: True

**FINDS:**

Registry ID: 110009464034

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Annual Waste Handled:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 40

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 480

Waste code: D003  
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 50

Waste code: P063  
Waste name: HYDROCYANIC ACID  
Amount (Lbs): 50

Violation Status: No violations found

**LEAKING AUTOMOBILE GAS TANK (Continued)**

**S110540031**

DEC Memo: "9/15/10-Vought-Primary off hours responder. Called FDNY Hourigan (718) 640-5512). Vought spoke to Hourigan and noted it was responsibility of car owner to dispose of gasoline and furthermore DEC can only recover oil and no gasoline (gasoline to be recovered by DEP Hazmat). Hourigan will return call with VIN and license plate number. Vought will forward to ECOs and attempt to make immediate contact. If immediate contact not possible Vought will consult with DEC Austin for further instruction and possible Hazmat recovery. Vought received callback from FDNY Hourigan and info for car is: Ford Minivan VIN#: 2FMDAS140TBB42442 Plates: NY EVL-2523 DEC Austin noted that automobile info should be provided to ECO's to see if local address. If local address ECO's will be requested to contact automobile owner and require them to pick up gasoline. If not local address then gasoline will be referred to DEP Hazmat for immediate pick up due to flammability hazard. Vought provided info to ECO's for car owner investigation. ECO's noted that they could not assist as this is a civil and not criminal manner and found that car registered to: Kervin L Brown 143-56 229th Street 2nd Floor Springfield Gardens, NY 11413 Vought spoke to DEC Austin and DEC Rahman to perform site visit to Astoria at spill location to see if drum present. If drum present then site visit will be performed to Springfield Gardens to deliver letter requiring immediate drum pickup. Vought drafted CSL with drum pickup language and provided to DEC Rahman for possible drop off at Residence. Vought received callback from DEC Rahman who was onsite and drum no longer present. Vought informed FDNY Hourigan and closed spill."

Remarks: "7-10 gallons from a ruptured tank. spill contained 15 gallon drum, they will mark it accordingly."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo:

"1/7/12-Vought-Primary off-hours responder. This spill assigned to Con Ed Unassigned as part of Con Edison minor spill portfolio review and possible closure. Initial EMIS #232365 downloaded into e-docs, entered into Cross Reference Field and deleted from Proxy. As per initial EMIS, FOD SUPERVISOR PINEDO REPORTS WHILE CHECKING THE STATUS OF HTV-946 HE DISCOVERED APPROX 1 QUART OF UNKNOWN OIL ON 3 GALLONS OF WATER. CONTAINED TO STRUCTURE. THE HTV IS LOCATED IN BUSH TERMINAL BLDG#26(CUST PROPERTY). THE FEEDER INVOLVED IS SD3129. ACCT#C3526. PINEDO WILL CALL BACK WITH ENV TAG# & C.O.C.# SPOKE WITH ERT NEIL SKOW TO CONFIRM THIS IS A REPORTABLE INCIDENT. CIG MUGGEO NOTIFIED 0025HRS. 2/24/17 - Austin - This vault, containing customer (non-Con Ed) equipment) had flooded during Storm Sandy - Con Ed contained and cleaned up the spill, and the equipment was removed - See document files for further information - Spill closed - end"

**FINDS:**

Registry ID: 110004320477

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

**FINDS:**

Registry ID: 110004309089

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110004550067

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110004325347

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110006490546

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 1053

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 206

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Will clean up under this spill number. Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND PRIOR SPILL NUMBERS HERE - 9416269 9614390 6/7/2001 - Sangesland visited the site: Anton Junicic Ent. inc. (junk yard) with ECO Anthony Panipinto. The ground around the car dismantling area showed signs of petroleum pooling and saturation into the soil. Owners (brothers) Bernardo and Anton Jr. Junicic - 718-768-8884 Mr. Junicic presented drawings showing an oil/water separator which had been installed on the site in 1999. It is a buried unit with 2 stormwater drains leading into it. The water discharge goes into the NYC DEP sewer system. Oil is periodically pumped out of this unit and disposed of. Because the surface of the yard is soil (owner says it is cement 1' to 2' down) the rainwater had never been properly directed into the 2 drains. DEC wrote a DO WORK letter (6/8/2001) directing Mr. Junicic to: 1) Excavate the site (soil/gravel) down to either clean soil or a solid barrier (old cement floor). Contact DEC for a site inspection. 2) If DEC inspection goes well, regrade the property and pour a new cement floor. Contour this floor so rainwater from the whole property flows to the proper drains. 3) Reconfirm that the water discharge from the oil/water separator is properly hooked up to the city sewer system in accordance with the regulations of the NYCDEP. 4) Design the property layout to allow access to the Blue Cover on the separator unit. 5) Maintain a log book for the drainage of the oil out of the separator unit. On future inspections, this information will be requested to provide that the separator system has been maintained. Submit a written plan and schedule of how this work will be performed. This plan is due to DEC by July 31, 2001. 7/11/2001 Sangesland went back to the site. Mr. Junicic is completing the required work in phases. Today the north 1/3 of the site had been cleared and excavated. Sangesland saw one hot spot which was removed while there. After today's inspection, an 8 to 10 reinforced cement slab was going to be poured and contoured over the full north 1/3 of the property. 8/14/2001 Sangesland (from the street) could see that the north 1/3 of the lot had been cemented and Mr. Junicic had redeployed much of his equipment over this area. It appears that he is clearing out the south west 1/3 of the site. I assume this will be done soon. 4/15/2002 Sangesland could see that 2/3 of the site had been paved over. Mr. Junicic said he would move the container boxes (used for storage) and would pave the remainder of the site soon. 3/30/2006 Requires a site visit to confirm that the whole lot has been paved over with cement. 8/26/08 - Raphael Ketani. I made a site visit at the request of Steve Sangesland, case manager. I met one of the workers who told me that the boss and the supervisor were both away from the shop. The worker called his boss who told him that it would be alright for me to look around. The shop is very overcrowded with car parts. I inspected the northern part of the site first.</p>

There was a small pile of soil and fill under a few cars. A spot of bare concrete was visible next to the pile of material and I had the impression that there actually was concrete under the material. Next, I viewed the back of the site. There was concrete everywhere in plain sight. Lastly, I viewed the southern part of the site. Here there was a depressed area with a sharp border, but which had a historical fill base. The entrance to this part of the shop had bare historical fill and comprised an area of about 800 to 1000 square feet. The worker I had met told me that they ordered the concrete, but they are waiting on a contractor to install it. After this, I left. 8/21/2013 Someone from spills needs to make a final visit to this site. It's a junk yard on Third Ave under the elevated hwy. It's an open lot between 2 buildings. Steve worked with the owners back in the 2001-2004 time frame to scrape up most of the lot and pour a cement base. They did 1 quarter of the lot at a time. They have completed 3/4 of the work. I never saw the rear/southern quarter completed. They have been inspected several times, but this final quarter has not been done. 05/27/14-Hiralkumar Patel. with approval from DEC DeMeo, case transferred from DEC Sangesland to DEC Patel. alternate address: 776-778 3rd Ave PBS #: 2-610070. as per PBS record, the site has one 275 gal waste oil AST in contact with impervious barrier. the tank was installed in July 2001. other spills : 9416269, 9614390 spill # 9416269 was reported on 03/6/1995 due to possible contamination at the site. case was closed and merged with 9614390. spill # 9614390 was reported on 03/12/1997 by NYPD due to petroleum contamination at the site. case closed and merged with 0102524. 06/04/14-Hiralkumar Patel. 10:30 AM:- visited site. found new concrete in visible areas in most of the site, except southwest corner, where broken asphalt was noted. found petroleum stains on concrete surface. site was full of auto parts. Anton Junicic Ent. Inc. Attn.: Bernardo 776 3rd Avenue Brooklyn, NY 11232 PH. (718) 768-8884 based on observations during site visit earlier today and information available to date, no further action needed and case closed."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Handler Activities Summary:**

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
Used oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Classification: Small Quantity Generator

. Waste code: D001  
. Waste name: IGNITABLE WASTE

Facility Has Received Notices of Violations:

Regulation violated: Not reported  
Area of violation: Generators - Records/Reporting  
Date violation determined: 10/07/1996  
Date achieved compliance: 11/18/1996  
Violation lead agency: State  
Enforcement action: WRITTEN INFORMAL  
Enforcement action date: 10/07/1996  
Enf. disposition status: Not reported  
Enf. disp. status date: Not reported  
Enforcement lead agency: State  
Proposed penalty amount: Not reported  
Final penalty amount: Not reported  
Paid penalty amount: Not reported

Evaluation Action Summary:

Evaluation date: 01/01/1996  
Evaluation: NON-FINANCIAL RECORD REVIEW  
Area of violation: Generators - Records/Reporting  
Date achieved compliance: 11/18/1996  
Evaluation lead agency: State

FINDS:

Registry ID: 110004514044

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Actual:**  
**6 ft.**

Site Description: Location: The Former East Coast Industrial Uniform Site is located in the City of New York, Borough of Brooklyn (Kings County) at 35, 43 and 49 (formerly 39) Skillman Street. It is currently identified as Section 7, Block 1886, Lots 10, 11 and 12 on the NYC tax map. Site Features: The site was vacant and was formerly developed with three attached buildings and a parking area. The site is now occupied by three new 6-story residential apartment buildings. Each building consists of 16 apartments with a mix of 3, 4 and 5 bedroom units to better serve the needs of the community. Each building features a full basement level with utility rooms, residential living space, and 8-9 parking spaces and outdoor recreation areas on the roof. Current Zoning/Uses: The site has historically been zoned for light industrial/commercial applications. In 2001, the area was rezoned as a Special Mixed Use district (MX4) which added an R-6A residential zoning to the area. The surrounding land use includes 3 new multi-family residential buildings to the east, four new multi-family residential buildings and a vacant commercial building to the west, older multi-family walk up style buildings to the south and a

community/office building to the north. Past Use of the Site: The Site was developed prior to 1887 with a Brooklyn Union Gas Gasometer (gas holder) in the northern third of the property and multiple residential homes and stores on the southern portion. The holder was operated solely as a gas distribution holder; no gas production facilities were present. By 1935, the holder was removed and the northern section was vacant until approximately 1941 when it was a parking lot and then a furniture/framing company. From 1974 to 2008, East Coast Industrial Uniform, an industrial dry-cleaning operation, was operating on the site. There are several concrete lined trenches cut through the southeast end of the building which were likely used to contain wash water from numerous washing machines prior to discharge through the small aboveground oil water separator located in the southeast corner and finally to public sewer. An abandoned-in-place underground storage tank is located near the roll-up gate entrance to the building. The underground storage tank (UST) is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest.

Env Problem:

Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m<sup>3</sup> and TCE was detected at 687 ug/m<sup>3</sup>. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Soil - The limits of soil/fill excavation were guided by the results of endpoint soil sampling done around and below excavations associated with 1) the former 3,000 gallon UST (removed as part of the IRM) and 2) the removal of petroleum and chlorinated contaminated soil and fill. Excavations were advanced either until no UUSCO exceedances of PVOCs and CVOCs were detected or to the property boundaries. Groundwater - Following chemical oxidant (ISCO) injection, BTEX/PVOC concentration reductions have been observed within the monitoring wells MW5 and MW6 which are down gradient of the row of injection points IW5 - IW8, but no reductions have been observed in MW4, which is located between injection point rows IW1-IW4 and

**S116041517**

IW5-IW8. The four farthest on-Site down gradient monitoring wells (MW7, MW8, MW9 and MW10) have repeatedly shown low concentrations of the BTEX/PVOC compounds. Soil Vapor - A vapor mitigation system consisting of a sub-slab depressurization system and vapor barrier was installed beneath the portion of the basement slab in each of the 3 on-site buildings which are to be used for residential space. Certificate of Completion issued on 12/19/2013.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Section 7, Block 1886, Lots 10, 11 and 12 on the NYC tax map. Site Features: The site was vacant and was formerly developed with three attached buildings and a parking area. The site is now occupied by three new 6-story residential apartment buildings. Each building consists of 16 apartments with a mix of 3, 4 and 5 bedroom units to better serve the needs of the community. Each building features a full basement level with utility rooms, residential living space, and 8-9 parking spaces and outdoor recreation areas on the roof. Current Zoning/Uses: The site has historically been zoned for light industrial/commercial applications. In 2001, the area was rezoned as a Special Mixed Use district (MX4) which added an R-6A residential zoning to the area. The surrounding land use includes 3 new multi-family residential buildings to the east, four new multi-family residential buildings and a vacant commercial building to the west, older multi-family walk up style buildings to the south and a community/office building to the north. Past Use of the Site: The Site was developed prior to 1887 with a Brooklyn Union Gas Gasometer (gas holder) in the northern third of the property and multiple residential homes and stores on the southern portion. The holder was operated solely as a gas distribution holder; no gas production facilities were present. By 1935, the holder was removed and the northern section was vacant until approximately 1941 when it was a parking lot and then a furniture/framing company. From 1974 to 2008, East Coast Industrial Uniform, an industrial dry-cleaning operation, was operating on the site. There are several concrete lined trenches cut through the southeast end of the building which were likely used to contain wash water from numerous washing machines prior to discharge through the small aboveground oil water separator located in the southeast corner and finally to public sewer. An abandoned-in-place underground storage tank is located near the roll-up gate entrance to the building. The underground storage tank (UST) is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest.

Env Problem: Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on

the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m3 and TCE was detected at 687 ug/m3. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Soil - The limits of soil/fill excavation were guided by the results of endpoint soil sampling done around and below excavations associated with 1) the former 3,000 gallon UST (removed as part of the IRM) and 2) the removal of petroleum and chlorinated contaminated soil and fill. Excavations were advanced either until no UUSCO exceedances of PVOCs and CVOCs were detected or to the property boundaries. Groundwater - Following chemical oxidant(ISCO)injection, BTEX/PVOC concentration reductions have been observed within the monitoring wells MW5 and MW6 which are down gradient of the row of injection points IW5 - IW8, but no reductions have been observed in MW4, which is located between injection point rows IW1-IW4 and IW5-IW8. The four farthest on-Site down gradient monitoring wells (MW7, MW8, MW9 and MW10) have repeatedly shown low concentrations of the BTEX/PVOC compounds. Soil Vapor - A vapor mitigation system consisting of a sub-slab depressurization system and vapor barrier was installed beneath the portion of the basement slab in each of the 3 on-site buildings which are to be used for residential space. Certificate of Completion issued on 12/19/2013.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Site Description: Location: The Former East Coast Industrial Uniform Site is located in the City of New York, Borough of Brooklyn (Kings County) at 35, 43 and 49 (formerly 39) Skillman Street. It is currently identified as Section 7, Block 1886, Lots 10, 11 and 12 on the NYC tax map. Site Features: The site was vacant and was formerly developed with three attached buildings and a parking area. The site is now occupied by three new 6-story residential apartment buildings. Each building consists of 16 apartments with a mix of 3, 4 and 5 bedroom units to better serve the needs of the community. Each building features a

**FORMER EAST COAST INDUSTRIAL UNIFORM (Continued)**

**S116041517**

full basement level with utility rooms, residential living space, and 8-9 parking spaces and outdoor recreation areas on the roof. Current Zoning/Uses: The site has historically been zoned for light industrial/commercial applications. In 2001, the area was rezoned as a Special Mixed Use district (MX4) which added an R-6A residential zoning to the area. The surrounding land use includes 3 new multi-family residential buildings to the east, four new multi-family residential buildings and a vacant commercial building to the west, older multi-family walk up style buildings to the south and a community/office building to the north. Past Use of the Site: The Site was developed prior to 1887 with a Brooklyn Union Gas Gasometer (gas holder) in the northern third of the property and multiple residential homes and stores on the southern portion. The holder was operated solely as a gas distribution holder; no gas production facilities were present. By 1935, the holder was removed and the northern section was vacant until approximately 1941 when it was a parking lot and then a furniture/framing company. From 1974 to 2008, East Coast Industrial Uniform, an industrial dry-cleaning operation, was operating on the site. There are several concrete lined trenches cut through the southeast end of the building which were likely used to contain wash water from numerous washing machines prior to discharge through the small aboveground oil water separator located in the southeast corner and finally to public sewer. An abandoned-in-place underground storage tank is located near the roll-up gate entrance to the building. The underground storage tank (UST) is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest.

Env Problem: Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m<sup>3</sup> and TCE was detected at 687 ug/m<sup>3</sup>. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Soil - The limits of soil/fill excavation were guided by the results of endpoint soil sampling done around and below

excavations associated with 1) the former 3,000 gallon UST (removed as part of the IRM) and 2) the removal of petroleum and chlorinated contaminated soil and fill. Excavations were advanced either until no UUSCO exceedances of PVOCs and CVOCs were detected or to the property boundaries. Groundwater - Following chemical oxidant(ISCO)injection, BTEX/PVOC concentration reductions have been observed within the monitoring wells MW5 and MW6 which are down gradient of the row of injection points IW5 - IW8, but no reductions have been observed in MW4, which is located between injection point rows IW1-IW4 and IW5-IW8. The four farthest on-Site down gradient monitoring wells (MW7, MW8, MW9 and MW10) have repeatedly shown low concentrations of the BTEX/PVOC compounds. Soil Vapor - A vapor mitigation system consisting of a sub-slab depressurization system and vapor barrier was installed beneath the portion of the basement slab in each of the 3 on-site buildings which are to be used for residential space. Certificate of Completion issued on 12/19/2013.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

The underground storage tank (UST) is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest.

Env Problem: Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene

was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m3 and TCE was detected at 687 ug/m3. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Soil - The limits of soil/fill excavation were guided by the results of endpoint soil sampling done around and below excavations associated with 1) the former 3,000 gallon UST (removed as part of the IRM) and 2) the removal of petroleum and chlorinated contaminated soil and fill. Excavations were advanced either until no UUSCO exceedances of PVOCs and CVOCs were detected or to the property boundaries. Groundwater - Following chemical oxidant(ISCO)injection, BTEX/PVOC concentration reductions have been observed within the monitoring wells MW5 and MW6 which are down gradient of the row of injection points IW5 - IW8, but no reductions have been observed in MW4, which is located between injection point rows IW1-IW4 and IW5-IW8. The four farthest on-Site down gradient monitoring wells (MW7, MW8, MW9 and MW10) have repeatedly shown low concentrations of the BTEX/PVOC compounds. Soil Vapor - A vapor mitigation system consisting of a sub-slab depressurization system and vapor barrier was installed beneath the portion of the basement slab in each of the 3 on-site buildings which are to be used for residential space. Certificate of Completion issued on 12/19/2013.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Site Description: Location: The Former East Coast Industrial Uniform Site is located in the City of New York, Borough of Brooklyn (Kings County) at 35, 43 and 49 (formerly 39) Skillman Street. It is currently identified as Section 7, Block 1886, Lots 10, 11 and 12 on the NYC tax map. Site Features: The site was vacant and was formerly developed with three attached buildings and a parking area. The site is now occupied by three new 6-story residential apartment buildings. Each building consists of 16 apartments with a mix of 3, 4 and 5 bedroom units to better serve the needs of the community. Each building features a full basement level with utility rooms, residential living space, and 8-9 parking spaces and outdoor recreation areas on the roof. Current Zoning/Uses: The site has historically been zoned for light industrial/commercial applications. In 2001, the area was rezoned as a Special Mixed Use district (MX4) which added an R-6A residential zoning to the area. The surrounding land use includes 3 new multi-family residential buildings to the east, four new multi-family

residential buildings and a vacant commercial building to the west, older multi-family walk up style buildings to the south and a community/office building to the north. Past Use of the Site: The Site was developed prior to 1887 with a Brooklyn Union Gas Gasometer (gas holder) in the northern third of the property and multiple residential homes and stores on the southern portion. The holder was operated solely as a gas distribution holder; no gas production facilities were present. By 1935, the holder was removed and the northern section was vacant until approximately 1941 when it was a parking lot and then a furniture/framing company. From 1974 to 2008, East Coast Industrial Uniform, an industrial dry-cleaning operation, was operating on the site. There are several concrete lined trenches cut through the southeast end of the building which were likely used to contain wash water from numerous washing machines prior to discharge through the small aboveground oil water separator located in the southeast corner and finally to public sewer. An abandoned-in-place underground storage tank is located near the roll-up gate entrance to the building. The underground storage tank (UST) is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest.

Env Problem:

Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m<sup>3</sup> and TCE was detected at 687 ug/m<sup>3</sup>. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Soil - The limits of soil/fill excavation were guided by the results of endpoint soil sampling done around and below excavations associated with 1) the former 3,000 gallon UST (removed as part of the IRM) and 2) the removal of petroleum and chlorinated contaminated soil and fill. Excavations were advanced either until no UUSCO exceedances of PVOCs and CVOCs were detected or to the property boundaries. Groundwater - Following chemical oxidant (ISCO) injection, BTEX/PVOC concentration reductions have been observed within the monitoring wells MW5 and MW6 which are down gradient of the row of

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110004366365

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "3/4/2003: CLOSED DUE TO LACK OF ANY RECENT INFO - DOES NOT MEET ANY CLEANUP REQUIREMENTS. 5/18/06: Case reopened because high naphthalene found in downgradient MW8 on Verizon property. Assessment required letter sent, due back 7/18/06. PBS # 2-603597 5/31/06: Spoke to Commodore Manufacturing. He will send documents regarding legal closure of tanks three years ago. 6/5/06: Received letter with documentation that Action Environmental closed in place a 35,000 gallon heating oil tank that was previously abandoned in place. The tank was noted to have been properly abandoned in the late 1940's. 8/11/06: Spoke with Kevin O'Connor. Two 35,000 gallon USTs were abandoned in place. A third tank was found to be formerly abandoned

in place with sand. All three tanks were in parallel. Soil testing may have been completed by a different company. Contact owner for additional information. Called Abraham Damast (718-788-2600), he was not in the office. 8/21/06: Called Abraham Damast, the line was busy. 8/25/06: Left message with Abraham Damast's secretary to see if he has additional information regarding the tank removal/abandonment. 9/27/06: Sent letter to Abraham Damast requiring sampling results from the abandonment which occurred in September 2004. 10/11/06: Downgradient Verizon site Spill 9108899, located directly downgradient of Commodore manufacturing, was closed, although their upgradient well MW8 still shows high naphthalene contamination from an unknown upgradient source. Include Verizon's well MW8 in possible future sampling of this plume. 9/16/14 - Raphael Ketani. The spill was opened on 2/6/90 as a result of an integrity test failure for a two tank system. According to the spill report, these were two 550 gal. gasoline USTs. However, there is no documentation indicating that gasoline USTs were ever at the site. The site is owned by 4312 2nd Avenue Realty, LLC (zip code for site address is 11232). The contact is Abraham Damast at 19 Mitchell Drive, Kings Point, NY, 11024. The township for his home is North Hempstead. The general area of Nassau County is Great Neck. The block and lot for the site are 726 and 1. The information above came from a deed dated 12/31/2000 which was found in ACRIS. The PBS registration is #2-603597. It shows three 35,000 gal. USTs. Two had #2 heating oil and one had #6 heating oil. The tanks were closed in place. An investigation and tank closure report was sent on 5/12/99 by Action Remediation Co. It was produced for Action by Advanced Cleanup Technologies and is dated 5/11/99. According to the report, 5 soil borings were performed. There were no PID detections. These borings were turned into wells TW-01 to TW-05. Groundwater samples were collected and analyzed (received by the lab on 4/19/99). All of the results were non-detect. The tanks were cleaned out and abandoned in place. 9/19/14 - Raphael Ketani. I presented the case for closure to Hassan Hussein, EE III and head of Unit C Remediation. He approved the closure. The closure was based on the lack of evidence of soil and groundwater contamination as the PID results were all 0 ppm and the groundwater results were all non-detect for VOCs and SVOCs. The closure was also based upon the letter from Action Remediation Co. indicating that they had abandoned the tanks by cleaning out the tanks and filling them with sand. Considering the information in the case file, it was determined that the spill was not a threat to the public or the environment. The spill case was closed today. "

Site Description:      The Site is located in the Gowanus section of Brooklyn in a zoned manufacturing area. The site was formerly used by Moore McCormack Lines, a steamship company (dates of occupancy unknown). Subsequently, Continental Terminals used the pier shed to store and distribute cocoa beans into the late 1990s. The shed was removed and the pier was then used by American Warehousing for vehicle storage. The Site also contains a garage that was used for vehicle maintenance. The Site was recently paved. The northern portion of the Site is used for storage of sea containers by the New York City Police Department, and a small electric power generating station operated by the New York Power Authority occupies the south part of the Site. Immediately northwest of the Site is Upper New York Bay/Gowanus Canal, immediately northeast is industrial/manufacturing, and immediately southeast are commercial and office buildings. The Site is approximately 98,010 square feet (2.2 acres) in size and is occupied by the NY Power Authority as well as the storage area for sea containers for NYPD. The nearest residential units are 0.12 miles (approx. 650 feet) to the east-southeast. There are no records of Petroleum Bulk Storage or Chemical Bulk Storage on the site. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.

Env Problem:          Based upon investigations conducted to date, the primary contaminants of concern at the site include mercury, lead and copper. In July 2009, following discovery of petroleum contaminated soil during excavation to support repairs to the Site's bulkhead, three test pits were excavated to determine the extent of the petroleum impacts. A total of seven sidewall soil samples and one grab groundwater sample were collected from the test pits. One sample was also collected for waste classification from the stockpiled soil excavated from the initial excavation and the test pits. Sidewall samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, pesticides and Total Petroleum Hydrocarbons. The composite waste classification sample was analyzed for TCLP parameters as well. The following contaminants with maximum concentrations were observed in soil: 17 ppm mercury; 1,100 ppm lead; and 330 ppm copper. The Part 375 Industrial Use Soil Cleanup Objectives (SCOs) have been exceeded for mercury, and the Part 375 Commercial Use SCOs have been exceeded for lead and copper. Groundwater samples were all below applicable Groundwater Standards for VOCs and SVOCs, but were not analyzed for metals. Depth to groundwater is approximately 9-15' below grade and is likely influenced by tidal action due to the immediately adjacent Gowanus Bay. Site characterization is required to evaluate the presence or

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SUN 10/10/95: This is additional information about material spilled from the translation of the old spill file: YARDS. Transferred from Tang. 09/23/2003 Transferred from Tibbe to Sun. 10/03/2003- Sun- File Review by Sun: -Quarterly Report Jan 2003 thru March 2003 by EnviroTrac ( Jeff Bohlen, 631-471-1500) -On Jan 28, 2003, Verizon's consultant performed the injection of oxygen releasing material (ORM) into the groundwater at the site. A total of 440 pounds of calcium peroxide (IXPER 75C) was injected through a network of 10 boring locations. At each boring, Geoprobe equipment was utilized to disperse approximately 40 to 50 pounds of ORM and a half of a pound of food grade sugar across the uppermost 12-feet of saturated soils. The results of this first quarter groundwater monitoring event indicate a decline in total dissolved BTEX/MTBE concentrations in Monitoring wells MW-2, MW-3, MW-5, MW-8 and MW-B. But, it show a significant increase in total BTEX & total VOCs in MW-4, and did not produce the desired downward trend of dissolved VOCs in groundwater. -Quarterly Report April 2003 thru June 2003 by EnviroTRac Ltd (Jeff Bohlen, 631-471-1500)- The results of this quarter indicate a decline in total dissolved BTEX/MTBE concentrations in Monitoring Wells MW-1, MW-3, MW-5, MW-7 and MW-B. But, it shows a significant increase in total dissolved BTEX and total VOCs in MW-2, MW-4 and MW-8. The bio remediation using ORM injection into the groundwater is not producing the intended results. DEC intends to ask Verizon to investigate the soil around the 2x2000 gallon gasoline USTs (closed-in-place), and to confirm the groundwater flow direction. 10/07/2003- Sun & Vought visited the Verizon's site and met with John Quatrale of Verizon and Jeff Bohlen of Envirotrac. Based on our discussion, Verizon/Envirotrac will confirm the ground water flow direction in the next quarterly report. 10/17/2003-Sun sent an e-mail to John Quatrale of Verizon (516-292-8166), requesting the following actions be taken: 1) Correct the North arrow direction on Figure 1 of the

Quarterly Report, 2) Re-survey the wells and determine the groundwater flow direction, 3) Provide the most recent quarterly report-covering July 2003 through September 2003. 10/30/2003-Sun-File Review by Sun: -Updated Report-July 2003 through September 2003: The results of the third quarter 2003 groundwater monitoring event indicated a decline in total dissolved VOC concentrations in MW-2 and MW-4, however, the total dissolved VOC concentrations increased in MW-5, MW-8, and MW-B. The hottest spot is on MW-4, which has 28,111 ppb of BTEX (max), and 30,411 ppb of total VOCs(max). MW-2 has the highest MTBE of 1,300 ppb (max). Per the quarterly report, Verizon may elec to remove the active 4000-gallon underground storage tank (UST) containing gasoline along with the dispenser island and associated piping during the next reporting period. 12/31/2004-File Update by Sun: On April 8th and 9th, 2004, one 4000-gallon gasoline underground storage tank (UST) and the associated dispenser island and piping at the subject site were removed. A total of six post-excavation soil samples were collected. Five of the soil samples were collected from the UST excavation. The soil samples were collected at each sidewall of the UST excavation in addition to the bottom of the UST excavation. On additional soil sample was collected from the area of the dispenser island. Post-excavation soil samples collected from the sidewalls and bottom of the UST excavation and from the area of the dispenser island were below NYSDEC TAGM 4046 Recommended Soil Cleanup Objectives for the VOCs analyzed. 1/3/2005-File Update by Sun: On 12/7/04, the Department approves the remedial system proposed by EnviroTrac dated 11/1/04 for the subject site; specifically, the use of Soil Vapor Extraction/Air Sparging (SVE/AS) remedial system for in-situ remediation of the petroleum contaminated subsurface soil as well as petroleum compounds dissolved in groundwater. 1/5/06: Case reassigned to Andersen. 1/11/06: Reviewed the quarterly report dated 1/10/06. SVE/AS in operation. Samples taken on 9/28/05. Max BTEX 164.2 ppb (MW-4). Max MTBE 178 ppb (MW2). 1/19/06: Reviewed the fourth quarterly 2005 update report. BTEX and MTBE ND in all wells sampled. Approved shutoff of the AS/SVE system. 4/27/06: Meeting with Verizon, NYSDEC, and EnviroTrac. March gw monitoring showed rebounding in one well. Awaiting formal copy of monitoring report. 5/11/06: Received first quarterly 2006. SVE/AS was shut off on 1/19/06. BTEX and MTBE ND in all wells except MWB. An off site source is suspected in MWB. Concentrations in MWB: BTEX 33.6ppb, MTBE ND, Naphthalene 1,770 ppb. The naphthalene concentration in MWB was ND for the last two quarters. Wait another quarter to confirm the naphthalene concentration in MWB. Then request off site well to confirm an off-site source. Reopened spill 8910578, failed tank tightness test of fuel oil USTs on upgradient property which was never investigated. 10/11/06: Received april - june 2006 monitoring report. Wells sampled on 6/15/06. Max BTEX 19 ppb (MWB), max MTBE 47 ppb (MW-2). TVOC 1,093 ppb (MWB). High naphthalene in MWB may be result of an off-site source. Spill 8910578, directly upgradient, is currently being investigated. The Department approved that groundwater sampling cease while the Department investigates spill 8910578. 5/24/07: NFA issued."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Tank Info:

Tank Number: 001  
Tank Id: 26314  
Material Code: 0003  
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

H99 - Tank Leak Detection - Other  
J02 - Dispenser - Suction Dispenser  
C03 - Pipe Location - Aboveground/Underground Combination  
E02 - Piping Secondary Containment - Vault (with Access)  
F00 - Pipe External Protection - None  
B00 - Tank External Protection - None  
K00 - Spill Prevention - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
A00 - Tank Internal Protection - None  
I00 - Overfill - None  
L09 - Piping Leak Detection - Exempt Suction Piping  
G03 - Tank Secondary Containment - Vault (w/o access)

Tank Location: 6  
Tank Type: Steel/Carbon Steel/Iron  
Tank Status: Closed - Removed  
Pipe Model: Not reported  
Install Date: 12/01/1926  
Capacity Gallons: 5000  
Tightness Test Method: -  
Date Test: Not reported  
Next Test Date: Not reported

DEC Memo: "03/22/05-Sharif// Sharif and Mr. Sawyer responded to the site.About 4000 gallons of #6 oil came out of vent line and top of the tank while the pump to the boiler was replaced and being tested.Oil had been contained in the secondary container(vault). Vent is located out of the building at the backside where about 20'by 20' open area adjacent to couple of abandoned railroad track line is impacted by the oil. Oil spreaded over one of the track of about 10 ft in

length. Petroleum Tank Cleaners (PTC) has been called in to do the clean up. NYC Transit, Office of System Safety (Josephina Volyn/Richel Kron, 718-243-4581, Fax: 718-243-4309) has been notified of their property impact. 04/06/05-SR// PTC excavated the rail track, took sample, backfill soon with supervision from NYC Transit. Open lot between building and the track has been field screened. Contamination found. Property owner Mr. Merhige was contacted for revised work plan including tank vault and open lot. 9/8/05-Vought-File review as per DEC Austin due to inquiry by Rachel Kron (NYC Transit 646-252-5773). Spill out of vent pipe and also into tank room. Letter from DEC Rahman to Commercial Realty Co (11 East 26th Street, 11th Floor attn: Richard Merhige)-3/23/05. Letter sent requiring: 1) excavation of all oil impacted soil and debris including railroad track area 2) removal of oil from secondary containment vault 3) submission of soil sampling results. Scope of Work from Petroleum Tank Cleaners PTC (Anthony Lara 718-624-4842)-4/5/05. Scope of work includes: 1) product removal from vaults. Soil analyticals from PTC-5/24/05. Water analyticals show no TAGM Soil Cleanup Objective exceedences except for minor PAH's attributable to fill material. Letter from PTC (Lara) to DEC Rahman-6/27/05. PTC has removed all contaminated soil and debris from the vault, and as you agreed what was acceptable PTC has addressed any remaining contamination via the application of Biosolve bioremediation accelerant to the soil beneath the existing vault floor. PTC plans to begin installing a new concrete floor as early as 7/6/05. 9/8/05-Vought-Called Rachel (646-252-5773) and left message with outstanding requirements: 1) endpoint soil samples from track excavation 2) site plan and locations of endpoint sampling. Vought called Commercial Realty (Richard Merhige 212-947-7500) and he tried to call Rachel who has not returned call. PTC still cleaning out second tank room. PTC collected soil samples from outside and two 20' foot containers were generated from soil excavation. Jerry Sobel will be contact for next seven weeks as Richard will be going on vacation. Vought left message for PTC to return call with status of soil excavation and endpoint sampling. 10.19.05 Sharif- I spoke with Anthony of PTC, 646-772-7180 who informed me they made formal request to NYCT's property to do geoprobe investigation. NYCT holding them regarding some insurance coverage issues which will possibly be simplified as they are working on it. NYCT is supposed to getback to PTC by this week. I'll call NYCT next week about their approval. 12/15/05 Sun reassigned from Rahman to Foley. 1/3/2005 - Feng - File reviewed by Feng and summarized: 1) some samples were collected the boiler room with site plan provided, but did not indicated out whether soil or groundwater samples. High SVOCs. 2) Track area impacted, and removed the contaminated soil. DEC has been requested 1) endpoint soil samples from track excavation 2) site plan and locations of endpoint sampling. Nono were submitted on file. 3) DEC Rahman has assisted PTC to access the NYCT property and do the sampling. Wait for sampling result report. 05/09/06 - spoke to Mr. Bob Lamirata of PTC, 718-624-2185. He said he will take care of disposing the contaminated soil pile at the site in a few days. I will find out more of the subsurface contamination. - KST 6/15/06 - Bob Lamirata of PTC called and advised that contaminated soil pile has been removed. Will fax end-point sampling results. - KST 6/26/06 - PTC sent in the report which only has the lab results, no write-up. The results look clean. Called Bob Lamirata and told him that DEC needs a report summarizing the contamination and the actions taken by the RP OR PTC in cleaning up

or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Violation Status: No violations found

FINDS:

Registry ID: 110055453824

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FRED ALIMONDA (Continued)**

**S104619550**

DEC Region: 2  
DER Facility ID: 25407  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was TIPPLE Site is a 2 Family house in Brooklyn. DEC Sigona sent notice regarding the tank test failure on May 16, 2003. 4/23/2004 Sangesland -another TTF letter sent today 4/30/2004 Sangesland spoke to property owner Margie Alimonda. She said Bayside was hired to close out the buried 1500 gal tank and install a 550 in her garage. Sangesland spoke to Fred Caputo at Bayside (718-946-4000). He said the whole job was contracted out to AL Eastmond. Eastmond was to close out the tank, install the new tank and take care of the PBS paperwork. 11/8/05 Spoke to Margie Alimonda she said Bayside filled in the below ground tank and installed several above ground tanks. She said Bayside was to send in the paperwork. Spoke with a Margie at Bayside now Petco she had no record of work. Gave me name of Phil Tanella their installer in the area of the spill. I callled Tanella and left a message. J Lister 11/9/05 Spoke to employee of Al Eastmond (718-378-7000)who left a message for Renee. JL Open Issues: 1) Review of DEC database shows no PBS was ever filed (for a 1500 gal tank). - Question if this really was a 1500 gal tank on a 2 Family house in Brooklyn. 2) Apparently no soil boring samples were taken. Tank was just closed out and left. 09/6/06- Zhune sent TTF letter to: Fred Alimonda 357 40th Street Brooklyn, NY 11233 Margie Alimonda called to say that she will fax a copy of letter from Eastmond & Sons, Fuel Oil Tank Cleaning. Zhune got the fax but it was not visible. She will send it by mail. Zhune. Margie sent a visible job ticket from A.L.Eastmond. Eastmond close the underground tank. They filled it with sand. They installed 2(275) gallons AST in the basement. Petro tested the tank and failed. 09/02/09-Randy Austin and Zhune review the case and found no evidence that will indicate of petroleum release. Other than that tank test failure. Since tank fail test are no presumption not prove of spill. Therefore spil has been closed. "  
Remarks: "TANK TEST FAILURE ON 1,500 GALLON UST"

Contact Name: MIKE SHERWOOD  
DEC Memo: "03/12/07-Hiralkumar Patel. spoke with Mr. Sharma. they were hired by contractor who is working at school construction site. site owned by NYC school authority. during construction activities, they hit underground tank and punched hole in it. as per Mr. Sharma, tank was about 1000 gal capacity and had about 800 gal diesel in it. spill started about 7:30 am and Mr. Sharma reached with crew for cleanup about 10 am. they have removed underground diesel tank and removed associated contaminated soil. they dug about two ft below tank invert. excavation was backfilled with five endpoint sample taken. asked Mr. Sharma to submit site plan with sampling locations, disposal manifests and sample analyticals. 03/27/07-Hiralkumar Patel. received call from Amy Fonpana (845-492-3178). they are preparing closure report and will send by 04/15/07. 04/24/07-Hiralkumar Patel. spoke with Ms. Fonpana. they are still waiting for some disposal manifests and other documents. she will send report soon. 06/19/07-Hiralkumar Patel. left message for Ms. Fonpana. 06/26/07-Hiralkumar Patel. received message from Ms. Fonpana. they are still working on-site and waiting for some documents. will send report once they get all documents. 06/27/07-Hiralkumar Patel. Mr. Sharma reported another spill at same site. (new spill #: 0703584). they did borings on property along 34th street and found soil and groundwater contamination. Mr. Sharma mentioned that site had multiple tanks. asked Mr. Sharma to send all analytical data (for all samples done on-site till date) and detailed scaled site map with all sampling locations, tank locations and associated lines. also asked Mr. Sharma to send copy of phase I and phase II reports. 06/28/07-Hiralkumar Patel. meet Bob Kanaparthi and Drew Pardus from NYC SCA and Michael Sherwood from Shaw environmental. Mr. Sherwood mentioned that school construction site is combination of two sites known as large parcel and small parcel. received phase I and Phase II reports from Mr. Sherwood. abstract of Phase I: - the site is located in mixed commercial/residential area on the corner of 4th ave and 35th street - previous occupants of the site included private residences, a stationer, tool manufacturing facility, a garage and candy manufacturing. - large parcel of site had 5000 gal tank and history of spills (9210902, 9605304, 9211737) - site is approx. 20 ft

above mean sea level - BASED ON phase II investigations conducted by Weston for the McDonalds restaurant site located at 968 4th ave, the depth of groundwater is approx. 37 ft bg and groundwater flow direction is to the northeast. <----- - major spill sites in neighbourhood: 1. Greenwood Cemetery (Spill #: 8710384, 8710694, 8902953, 9413808). all spill closed 2. Jackie Gleason Bus Depot (Spill #: 9106350, 9507015, 9705882, 9803068, 9902851, 9908589, 0211807, 0402205, 0413523, 0702197) 3. 971-975 4th ave (spill #: 9207015). groundwater contamination reported <----- 4. Mobile service station, 89-14 4th ave (Spill #: 0430002, 0330037, 8302631) reported groundwater contamination <----- 5. 987 4th Ave (spill #: 8706481). found groundwater contamination. abstract of Phase II report: - proposed design for school includes construction to a depth of approx. 18 ft bg - depth of groundwater was found to range from between 14 and 24 ft bg - total of 13 soil samples (LPB-1 to LPB-8, SPB-2,5,6,7 and 8) and 7 groundwater samples (LPB-1W, 5W and 8W, SPB-5,6,7 and 8) were collected for analysis - found heavy Trichlorethene (160,000 ppb) contamination in groundwater sample SPB-5 <----- - as found heavy TCE contamination in groundwater sample, did supplemental phase II - collected two soil sample from two borings (close to previous boring location SPB-5) and three groundwater sample from same two borings on-site and four groundwater sample from two off-site borings - also took 6 sub-slab soil-gas samples, because of heavy TCE contamination - found no contamination in any soil, groundwater or soil-gas samples during supplemental phase II investigation Michael Sherwood Shaw environmental PH. (914) 633-9324 (O) (516) 650-5290 (C) Fax (845) 492-3101 email: michael.sherwood@shawgrp.com Bob Kanaparathi NYC SCA Ph. (718) 472-8620 Drew Pardus NYC SCA Ph. (718) 752-5036 (O) (646) 577-8280 (C) during meeting Mr. Kanaparathi mentioned following: - entire site has been excavated to depth of 16 ft and groundwater is about two more feet deeper than existing excavation bottom. - during excavation, they removed total of five USTs (one 2000 gal fuel oil/diesel tank, one 1000 gal sugary mix tank, one 5000 gal tank, one 100 gal tank and one 1000 gal tank). - found contaminated soil around some tanks and has been removed - endpoint samples taken from contaminated zones - currently footing work for proposed building is going on at site - during construction found sheen on groundwater and gasoline odor - took groundwater samples from two different locations - found minor benzene (58 ppb) contamination in groundwater sample GW-1, along 35th street <---- - there will be two elevator pits, partially merged in groundwater - to work on elevator pit, they need to dewater those areas - due to high concentration of TCE in groundwater sample during first set of sampling, they will put vapor barrier and active SSDS under BASEMENT floor asked Mr. Pardus to do following: - installation of atleast three monitoring wells to define site specific groundwater flow direction and sampling soil and groundwater during this monitoring well installation. - samples must be analyzed for STARS 8260 & 8270 methods & report must include chlorinated compounds - no dewatering events until site-specific groundwater flow direction has defined (to prevent spreading contamination if dewatering points are downgradient to source of contamination) - no concrete/foundation work till full investigation completed - installation of one more monitoring well upgradient (once groundwater flow direction defined) to check any off-site migration - submission of soft copy of vapor barrier & SSDS design - monitoring wells atleast 5 ft below groundwater table - samples from monitoring

wells must be taken using Low Stress (low flow) Purging and Sampling procedure (EPA guidance)

\*\*\*\*\*

-\*- Spill #: 9207015. 971-975 4th Avenue, Brooklyn, NY. spill reported after found tank failed. PBS #: 2-297291. site had 48 tanks and were removed in 1994. from spill database, found that NYC School construction authority removed approx. 15,000 cubic yards of contaminated soil and had groundwater contaminated. case closed on 07/13/2006. WRONG REPORT UPLOADED ON E-DOCS (FIRST FILE IN LIST)

<----- \*\*\*\*\*

\*\*\*\*\*

\_\*\_\*\_\*

\*\*\*\*\*

-\*- Spill #: 8706481. 987 4th Ave, Brooklyn, NY. spill reported as gasoline tanks failed a test. PBS#: 2-157236. site had 14 tanks and were removed in 1990. from spill database, found that groundwater was impacted with gasoline spill and had free product in wells installed on-site at that time. groundwater is at 38 ft bg. case still open.

\*\*\*\*\*

-\*- 07/05/07-Hiralkumar Patel. visited site on 07/02/07 as found heavy soil and groundwater contamination in neighbour's property at 129 34th Street, which is auto repair shop. spoke with Mr. Pardus today and asked him to install additional monitoring wells along 34th street (two wells on 34th street along property line: one at each corner and one well along boundary between park and construction site). these wells are just for monitoring purpose, in case any contamination from auto repair area touches the construction site. also asked Mr. Pardus to provide site addresses for neighbours on south and east side of construction site (assumed upgradient side) 07/16/07-Hiralkumar Patel. received call from Mr. Pardus regarding sample analysis for specific chlorinated compounds. asked Mr. Pardus to run all groundwater samples for compound that was found high (PERC) in previous investigation. 07/23/07-Hiralkumar Patel. received message from Mr. Pardus asking for meeting. spoke with Mr. Pardus and asked him to submit data for review prior to any meeting. 07/24/07-Hiralkumar Patel. received sample analyticals and site map with monitoring well locations, from Mr. Pardus. they installed four wells on site and one on sidewalk along 35th street. found very minor contamination. from monitoring wells, they found groundwater flow in south direction (from site which has heavy groundwater contamination: 129 34th street). monitoring well #1 installed close to area where they found high PERC in groundwater. Mr. Pardus asked for dewatering of site for construction activities. mentioned to Mr. Pardus that as no contamination found in any samples, they can do dewatering but they need permits from city agencies for that. asked Mr. Pardus to install one well in corner of property along park along 34th street (as found heavy soil and groundwater contamination at site 129 34th street). also asked him to monitor well # 4 until it knocked down. asked Mr. Pardus to submit entire report with boring logs, water depths etc. 07/25/07-Hiralkumar Patel. spoke with Mr. Pardus. told him that they can start dewatering from site (based on analytical data). also asked Mr. Pardus to install a permanent monitoring well on sidewalk along 34th street (close to property line between subject site and park) as subject site is exactly downgradient from contaminated site at 129 34th street. this well will be used as monitoring point to see any oil from 129 34th street site hit construction site or not. Mr. Pardus mentioned that they will install

vapor barrier and sub-slab system. Mr. Pardus will schedule installation of one well on sidewalk along 34th street.

03/20/08-Hiralkumar Patel. received tank closure report from Shaw environmental. abstract: - site groundwater was encountered between 16 to 18 ft bg - installed four wells (MW-1, MW-2, MW-4 and MW-5) - no tidal influence noticed in wells MW-1, MW-2 and MW-5, via automatic data logger - groundwater level data from MW-4 shows rise in the water level; cause of this water level rise is unknown (no precipitation or on-site dewatering during or before water level measurement) - direction of groundwater flow from north toward the south and away from the Upper New York Bay; this is opposite of the anticipated direction of groundwater flow based upon the surface topography of the area and the proximity to the Upper New York Bay (0.3 miles northwest) - removed four regulated (petroleum) USTs and one non-regulated (sugar) UST in Mar.-Apr. 2007 - four petroleum tanks removed: one 2000 gal, one 1000 gal, one 5000 gal and one 100 gal - one 1000 gal sugar tank removed - 2000 gal tank was punctured during excavation and then spill reported - 2000 gal UST found to be in fairly good condition with no significant evidence of corrosion - final dimensions of excavation for 2000 gal UST measured approx. 15 ft wide by 20 ft long by 20 ft deep; after collection of endpoint samples, excavation backfilled - 100 gal UST was discovered immediately beneath the concrete slab of the former site building - 100 gal UST was found to be old and rusted with large openings - following removal of 100 gal UST, no evidence of release was observed; no impacted material was excavated; one bottom endpoint sample collected after tank removal - 5000 gal UST was abandoned-in-place with concrete - 5000 gal UST found to be slightly corroded but no holes were observed - final dimensions of excavation for 5000 gal UST measured approx. 30 ft wide by 50 ft long by 35 ft deep; after collection of endpoint sidewall samples, excavation backfilled - no endpoint bottom samples collected after 5000 gal tank removal - 1000 gal UST was discovered about 5 ft bg and found to be rusted with a large hole where it appears that the weld separated - final dimensions of excavation for 1000 gal UST measured approx. 10 ft wide by 15 ft long by 15 ft deep; after collection of endpoint samples, excavation backfilled - groundwater samples collected from one geoprobe GW-1 and four monitoring wells (MW-1, MW-2, MW-4 and MW-5) - found some SVOC contamination in endpoint soil samples and some VOC contamination in groundwater samples - school design includes a vapor barrier and an active SSDS

06/03/08-Hiralkumar Patel. spoke with Mr. Pardus. he doesn't know about construction status. asked him to submit soft copy of vapor barrier and SSDS design for review by NYS DOH, prior to installation of such.

06/06/08-Hiralkumar Patel. during site visit in neighbourhood, pass through subject site and found few floors already developed at the site. no information available whether vapor barrier and active SSDS were installed or not.

06/17/08-Hiralkumar Patel. spoke with Mr. Sherwood. asked him about endpoint bottom sample after removal of 5000 gal tank and design specification of vapor barrier and SSDS. left message for Mr. Pardus for following: - submission of design specs of vapor barrier and SSDS - confirmation about installation of vapor barrier and SSDS - clarification for not taking endpoint bottom sample after 5000 gal tank removed

06/23/08-Hiralkumar Patel. left message for Mr. Pardus.

07/09/08-Hiralkumar Patel. received email from Mr. Sherwood with vapor barrier and SSDS design and clarification about not taking

endpoint bottom samples after 5000 gal tank removal. as per Mr. Sherwood, Shaw environmental was not on site to witness the removal of the 5,000 gal UST as this work was overseen by GZA Environmental, the consultant to the general contractor. as per GZA, they have indicated that they initially removed the UST but did not collect confirmatory soil samples because they felt that there were some minor impacted soils that needed to be excavated and knew that the Contractor was coming back to this area to excavate for the building foundation. when contractor returned to the area to excavate for the building foundation, they indicated that they excavated contaminated soils down to the watertable at approximately 18 feet below grade, and therefore could not collect bottom soil samples. in June 2007, Shaw conducted a soil and groundwater investigation at the site. during that investigation, collected two water samples in the southwest corner of the building foundation excavation, immediately below the former location of the 5,000 gallon UST. one sample was collected from a temporary geotechnical well (GW-2) already in place at the Site and the other was collected from standing water (SGW-1) that had pooled in that corner of the Site. no contamination found in groundwater samples. 5000 gal UST was removed in Apr. 2007 and groundwater samples were taken in June 2007 after contractor removed soil under water table as part of foundation work. based on submitted documents till date, case closed. \*\*see Spill #: 0703584 & 0700836 also as reported to same site.\*\*"

Remarks:

"School under construction; underground tank was hit. Tank was emptied and removed, as well as contaminated soil. Area was backfilled and end point sample was taken from excavation."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Spiller Name: STEVEN FRANK  
Spiller Company: UNKNOWN  
Spiller Address: 830 4TH AVE  
Spiller Company: 999  
Contact Name: STEVEN FRANK  
DEC Memo: "10-24-2014 email from S. Frank: Dear Alex, We discovered material that has been identified as transmission fluid in well BW-1 at the 72nd Precinct site. The well location is shown on the attached site plan. The well is in the middle of the driveway area and there is no transmission fluid storage in this portion of the site so we suspect the fluid may have been introduced from the surface rather than migrating through the ground. We have a Vac Truck scheduled to evacuate the product next Wednesday. Let me know if you would like us to report a new spill for this finding. Sincerely, Steve Frank  
5-4-2015 Reviewed a report dated 2/26/2015. EFR via vacuum truck was performed at BW-01 on October 2014 and the product thickness was 0.34' in BW-01. On November 6 2014, the product thickness was 0.02'. Approximately 8-gallons of oil groundwater mixture was removed from the well. On December 4 and December 19, 2014, no free phase was recorded. I called S. Frank and requested that more monitoring events needed in order to determine if all free phase product was removed from the well. AZ 1-6-2016 Reviewed a report dated 5/28/2015. No free-phase product was measured in BW-01 since November 2014. The free-phase product was identified as transmission fluid. AZ 9-16-2016 Reviewed a report dated 3/10/2016. Spill Number 1407672 was reported as a result of free-phase product in well BW-01 which was identified as transmission fluid. LiRo performed fluid removal and has continued to monitor this well. No free-phase product was measured in BW-01 since November 2014. Based upon the monitoring data LiRo requested closure of Spill Number 1407672. I concur with this proposal. The following letter email was sent to S. frank and V. Brevdo on 9-19-16: Dear Steve, I have reviewed a Spill Closure Report dated March 3, 2016. The report stated that that spill #1407672 was reported as a result of discovery of free-phase product in well BW-01 which was identified as transmission oil. LiRo performed product removal and

S102233280

has continued to monitor this well. No free-phase product has been reported in well BW-01 since November 2014. Based upon this monitoring data, LiRo requested closure of this spill. This request is approved and the spill is closed. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov"

Remarks: "caller reporting that spill is caused by a unknown leak possibly from a vehicle. clean up is pending"

Contact Name: MIKE ENGLISH  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ZHITOMIRSKY TRANSFERRED FROM Y.KRIMGOLD. 10-12-2005 SVE and pump and treat systems are operated at the site. SVE system is extracting significant concentrations from the vadose zone. AZ 1/13/2006 Reviewed system report. Analytical results showed total VOCs concentrations in air samples at 550 ppb and 44.7 ppb in 1st sampling events. AZ 4-17-2006 Reviewed system report received in November 2006. Analytical results showed total VOCs concentrations in air samples at 1,832 ppb suggesting that SVE system continues to extract contaminants. URS recommended continuation of the groundwater extraction and treatment system. Groundwater sampling was performed. All wells except one showed exceedances ranging from 127 ppb to 19,100 ppb. Contaminant concentrations increased in wells MW-6,7,8,11 and 12. The average total VOC concentration increased from 6,297 ppb to 7,417 ppb. AZ 12/08/2006 Reviewed monitoring report dated September 22, 2006 and received on September 27, 2006. This report covers April - June 2006. On January 1, 2006 Greyhawk was assigned responsibility for this site. The site has SVE and GWET systems. VOCs were detected in all nine monitoring wells with concentrations ranging from 30 ppb to 14,700 ppb in MW-06. concentrations increased in two monitoring wells MW-01 and MW-08. It appears that the SVE system is not functioning efficiently as evidenced by relatively low VOC mass removal and restricted wellhead vacuum- 0.001 to 0.052 water column. The carbon unit should be replaced. Relatively low pumping rate limits the capture zone of 3 pumping wells. An increase in pumping rates would expand the size of the capture zone and might improve effectiveness of the SVE system. Significant VOC contamination persist in 7 of the 9 monitoring wells. Roux suggested continue quarterly gw monitoring, verify depth and condition of the ventilation wells, collect samples from MW-3 which was previously removed from the sampling program but is located very close to two other wells with significant VOC concentrations. Evaluate methods to optimize SVE and GWET systems. DEC concurred. AZ 4/26/2007 Reviewed monitoring report for the period of July - September 2006, dated December 15, 2006, and received on December 21, 2006, and report for the period of October - December 2006, dated April 11, 2007, and received on April 26, 2007. October - December 2006 Report stated that the SVE system is approaching asymptotic levels. Vacuum levels in four observation wells are low - 0.01 -0.04 , GWET system has low pumping rate which limits the capture zone of of the three extraction wells. Roux stated that increase in pumping rates would expand the

**72 PRECINCT NYPD -DDC (Continued)**

**S102233280**

size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations ranging from 2,252 ppb to 71,110 ppb. Significant increase in concentration was observed in MW-10 from 9,010 to 71,100 of total VOC. In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved and systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved. The following e-mail was sent to DDC/ROUX/Greyhawk: I have reviewed monitoring report for the period of October - December 2006, dated April 11, 2006, for this site. Vacuum levels in four observation wells of the SVE system are very low ( 0.01 -0.04 ). GWET system has low pumping rate which limits the capture zone of the three extraction wells. Roux stated that increase in pumping rates would expand the size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations in groundwater (up to 71,100 ppb of total VOC in well MW-10). Significant increase in total VOC concentrations was observed in MW-10 ( from 9,010 ppb to 71,100 ppb). In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved and the systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved. AZ 1-22-2008 Reviewed January - September 2007 Report submitted on November 13, 2007. GWET is ineffective due to the restricted pumping rates. The SVE and GWET systems are not operating efficiently. Sheen was detected in MW-04 and MW-06 in April 2007. Soil investigation was performed in July-August 2007. The highest VOC concentrations in soil were detected in RXSB-04 75,000 ppb at 0 to 2 feet bls. RXSB-01 - 49,400 ppb of total VOC at 23-25 feet bls. MW-06 contained 9,980 ppb of total VOCs, MW-10-5,220 ppb of total VOCs. MW-02 was destroyed. Roux proposed shutting down SVE and GWET systems, implement enhanced bioremediation. Contacted Brian Morrissey. The site requires hydraulic control over migrating groundwater plume. Proposals for a new groundwater treatment system are required ASAP. Brian will get back to me with a timetable. AZ 1-23-2008 Conference call with Brian Morrissey and Andy Leddins. Bioremediation as main remediation strategy is rejected by DEC since the plume must be hydraulically controlled. I requested plume delineation along 29th street and establishing of hydraulic control over the groundwater plume. Roux will install delineation wells within next two weeks, perform high vac test and confirmation studies of DPE system within next three to four weeks. After the studies are completed a DPE system will be

**S102233280**

installed. Permo OX Plus injection will be performed along Th Street as an IRM simultaneously with constructing a DPE system. Timely quarterly should be submitted for this site. AZ 7-22-2008 Reviewed January - October 2007 through March 2008 Report submitted on April 21, 2008. The quarterly report submittal was significantly delayed. The SVE and GWET systems are not operating efficiently and high level residual soil and groundwater (up to 11,790 ppb of the total VOCs) contamination remains at the site. DEC requested installation of two additional monitoring wells to delineate offsite extent of groundwater contamination in January 2008 but the wells have yet to be installed. DEC requested and Greyhawk/Roux concurred that high vac test and confirmation studies of DPE system should be performed. The test has not been conducted and the DPE system has not been installed. The remedial progress at the site is unsatisfactory. Quarterly Monitoring Reports should be submitted on time. DPE system should be installed, delineation wells and needed testing performed without delay. A timetable for the above activities should be submitted to DEC within a week. An e-mail describing the above requests was sent to DDC/Greyhawk/Roux/V.B. AZ 7-3-2008 Received an e-mail from Brian Morrissey/site update: 1.The 2 offsite wells (RXMW-01 and RXMW-02) were installed and developed in late June/early July. The well casings and building corners will be mapped by a licensed surveyor on Friday, July 25th. 2.Groundwater levels in on-site and off-site monitoring wells were gauged during the week on July 14th. 3.Groundwater samples were collected during the week on July 14th. We expect to see preliminary results during the first week of August. 4. We reviewed soil data from prior CMs and further evaluated subsurface conditions (contaminant levels in clay/silt areas). 5.We conducted a 2nd round of vacuum testing and vapor sampling on July 9th. 6.ADT installed 10 injection wells in late June/early July. Well development activities were completed during the week on July 7th. 7.PermeOx Plus injections commenced on July 21st (as an interim remedial measure). 8.Soil samples were collected for laboratory analyses during installation of the monitoring wells and injection wells. Samples at intervals with elevated PID readings were also sent for petroleum identification. Upon receipt of the results of the vapor sampling and soil analyses, Greyhawk and Roux Associates will develop the plan for modifying the existing remedial systems. Due to the priority status of this site, I will contact you at that time to discuss future remedial actions and a timetable. AZ 6-16-2009 I have reviewed a Monitoring Report dated March 19-2009 for the above site for the period of April 2008 through January 2009. According to the report, URS recommended excavating the isolated area of shallow soil contamination around MW-02. Apparently, this excavation has not been performed. In 2007 VOCs were detected in soil shallow zone (0'-2') at concentrations up to 75,000 ppb. The SVE and GWET systems are not operating efficiently. Groundwater and soil contamination remains at the site. Free phase product was detected on January 12, 2008 in RXMW-06 and identified as a mixture of gasoline and No.2 fuel (diesel). One round of bioremediation injection was performed on July 21, 2008. Post-injection monitoring has not been performed. The contamination has migrated off-site in a northerly direction to the other side of 29th Street. However, VOCs were non-detect in two off-site wells (MW-13 and MW-14) installed at DEC request. Roux proposed modification of the SVE system by applying full vacuum to one or two extraction wells and using packers. This proposal is approved. On-site 1,000 gallon emergency generator diesel

UST and onsite heating oil tanks should be tested without delay in order to determine a source of contamination at the site. DEC has not received results of the post-injection monitoring. These results should be submitted to DEC without delay. GWET or DPE system modification/installation plans should be submitted to DEC. Remediation recovery system (GWET or DPE) should be capable of capturing the contaminant plume and preventing off-site migration. Working groundwater recovery system should be installed at the site. Additional bioremediation injection could be used only as interim remedial measure. AZ 10-21-2010 The site was discussed at October 19, 2010, meeting with DDC/LIRO. The SVE system has not been modified and currently shut off. 1,000 gal emergency generator tank was not located by Roux. 8,000 heating oil tank should be tested. Shallow excavation should be performed as it was discussed at the meeting. LiRo will develop low flow multi well groundwater remedial system. Geoprobe borings will be performed prior to the excavation. I called S. Frank on October 21, 2010, to confirm investigation details. Design report will be submitted in November 2010. AZ 10-25-2010 E-mail from S. Frank/ Liro: Alex, Thanks for your call on the 72nd precinct site status following up our discussion from the quarterly meeting on October 19, 2010. Just to make sure I didn't miss anything, we discussed the following: 1 You asked that the shallow excavation work near MW-02 that Roux/NYSDEC worked out, should be implemented. I advised you that we had recommended sampling at that location to confirm that contamination is still present. 2 You asked that we implement modifications to the SVE system (i.e., packers and applying full vacuum to 1 or 2 wells) that Roux had recommended. 3 You asked about the status 1,000-gallon diesel tank for the emergency generator. I advised you that Roux reported that they could not find the tank. 4 You requested the status of tank testing for the 8,000 gallon heating oil tank. I found the tank tightness test report from August 2009 and have attached it. AZ 10-4-2010 An e-mail was sent to LiRo/V.Brevdo/F.Ashkan: Dear Steve, I have reviewed Quarterly and Site Turn-Over Status Report with the proposals dated August 3, 2010. The report provides very detailed information and comprehensive analysis of the site status. According to the report, the SVE/GWET system is down since 2008. Roux conducted packer tests and recommended SVE system modifications. Groundwater contamination appears to have migrated off-site northeast across 29th Street. Roux performed two rounds of PermeOx injection after which VOC concentrations slightly decreased in groundwater. Heavy soil contamination and relatively high dissolved groundwater contamination exist at the site. There are four USTs closed in place. Based on the above, DEC requires the following: Actual USTs information should be reconciled with the Petroleum Bulk Storage (PBS) records and changes filed with the PBS section. I suggest that the tanks closed in place should be excavated, utilities and structures permitting. SVE/GWET system should be restarted. SVE portion of the system should be modified. Modifications should be based on the Roux's pilot test results. Hot spot excavation of soil should be performed around wells IP-09 and MW-02. Investigation of the piping associated with the former gasoline UST and the trench drain system should be performed. If additional soil investigation for the purpose of excavation is needed, it should be performed without delay. Additional rounds of in-situ chemical oxidation should be discontinued pending soil excavation and restart of the remedial system. The pump test is approved and should be performed if needed. Wells MW-05 and MW-15

**S102233280**

should be added to the monitoring program. SVOC analysis of ground water could be performed, if LiRo considers it necessary. 600 gallon waste oil UST should be located. A detailed work plan with the implementation schedule should be submitted to DEC no later than in 30 days. AZ 3-1-2011 Remedial Action Plan submitted on Dec. 1, 2010 was reviewed. The following e-mail was sent to S. Frank/ F. Ashkan/ V. Brevdo: Dear Steve, I have reviewed the Remedial Action Plan for the above site. A proposed excavation is approved. The excavation should include area around MW-07. The area of the excavation should be extended north, if feasible, to cover the contaminant plume. Tanks closed in place and associated piping should be excavated. Post excavation samples should be taken. Proposed GWET system should be modified to encompass contamination migrated across 29th Street. Contamination should be remediated on-site and off-site. SVE pilot test is approved. GWET system and SVE system should be developed after the excavation is performed and a monitoring round confirms the exact boundaries of contamination. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. AZ 3-29-2011 Reviewed quarterly monitoring report dated Dec. 14, 2011. Well RXMW-05 was converted to injection but, nevertheless, sampled. Total VOC concentrations ranged from 73 ppb to 16,213 ppb. The pump test was conducted but on Sept. 2010, and indicated a limited flow capacity. Bioremediation sample results do not indicate a reduction of contaminant concentrations due to the bio-injections that were completed by Roux in July 2008 and September 2009. The results of the packer test were inconclusive. Soil contamination is present along the northern portion of the building and along 2nd St. (north side) extending 8' below the water table. MW-07 exhibit a significant increase in total VOCs. AZ 6-30-2011 Reviewed quarterly monitoring report dated March 1, 2011. Excavation in the vicinity of IP-09 and a former fill port is planned. Installation of SVE wells is scheduled. I contacted S. Frank and requested to repeat GPR test to locate closed in place tanks. GWET is being designed. The site has gross dissolved petroleum contamination (up to 18,634 ppb of total VOCs). This is the LiRo's highest priority site. AZ 10-25-2011 At the meeting with LiRo in-situ chemical oxidation (ISCO) pilot test described in a report dated October 13, 2011, was approved. An ISCO pilot plan will be prepared and submitted to DEC for review. AZ 10-25-2011 The following email was sent to S. Frank/F. Ashkan/V. Brevdo: Steve, You can request a FOIL information for sp.#0907094 and Langan's report related to this spill. The report stated that the source of the contamination at the site is 72nd Precinct. AZ 1-30-2012 Reviewed QMR and in-situ chemical oxidation pilot test work plan dated November 14, 2011. Second GPR survey was scheduled for November 2012. ISCO Pilot Test approved by DEC approved by DEC at October 25, 2011, meeting will be implemented. Two additional monitoring wells will be installed west/northwest of destroyed well MW-02. This area was previously inaccessible due to the SVE/GWET system trailer. Wells RXMW-02, RXMW-04 and RXMW-05 will be replaced. AZ 11-15-2012 Reviewed a quarterly monitoring report (October 2011-April 2012). Dissolved contaminant concentration increased significantly in two wells MW-07 (from 6518 ppb to 12,930 ppb) and MW-10 (from 1677 ppb to 4973 ppb). Discussed the site with S. Frank. 11-16-2012 An email from S. Frank: Alex, Monitoring wells for the 72nd Pct work were replaced as follows: RXMW-02, replaced by RXMW-02R RXMW-04, replaced by RXMW-04R RXMW-05, replaced by RXMW-05R The wells were replaced in Feb-March 2012. The soil results from the well

**72 PRECINCT NYPD -DDC (Continued)**

**S102233280**

installations were reported in the previous quarterly report (dated 6-18-12). Groundwater results for the replacement wells are included in the latest quarterly report. AZ 11-16-2012 An email was sent to S. Frank/V. Brevdo/F.Ashkan: Dear Steve, I have reviewed a quarterly monitoring report (October 2011- April 2012). LiRo completed the first ISCO injection on April 10, 2012. Nevertheless, dissolved contaminant concentrations increased significantly in two wells MW-07 (from 6,518 ppb to 12,930 ppb) and MW-10 (from 1,677 ppb to 4,973 ppb). It seems that ISCO injections are not effective enough to treat existing offsite contamination. LiRo could proceed with the remaining ISCO injections. However, alternative plans for treatment of the offsite contamination should be developed and submitted to DEC. Sincerely, Alexander Zhitomirsky 4-3-2013 Reviewed a quarterly monitoring report dated 11-13-2013. Post injection groundwater sampling indicates a reduction in total VOC concentrations in wells with the dissolved contaminant plume. Also, some total VOC spikes in post injection samples were recorded. The following e-mail was sent to S. Frank/V. brevdo/ F. Ashkan: Dear Steve, I have reviewed and discussed over the phone with you the above site. LiRo proposed to expand ISCO Pilot Test Program to the precinct side of 29th Street. This proposal is approved. If this remedial strategy is not effective, an alterative remedial strategy should be implemented. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. Sincerely, Alex Zhitomirsky 10-9-2013 Reviewed Quarterly Monitoring Report dated March 4, 2013. LiRo will perform additional injections following re-evaluation of the calculated quantities of hydrogen peroxide and catalyst. On January 3, 2013, in a Progress Summary Meeting, DEC agreed with LiRo's recommendation to complete an ISCO Pilot Test Program on the precinct side of 29th Street. AZ 10-18-2013 Reviewed Quarterly Monitoring Report dated June 4, 2013. A Work Plan for ISCO injection is included in the report. Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City and is pending available NYCDDC funding. AZ 5-20-2014 Reviewed Quarterly Monitoring Report dated October 9, 2013. Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City and is tentatively scheduled. Potential off-site sources include the property of 149 29th Street and 822 4th Avenue, both located directly across (east) of the 72nd Precinct. The total VOC concentrations on site ranged from 7 ppb to 18,056 ppb. The total off-site VOC concentrations in off-site wells ranged from 302 ppb to 18,596 ppb. AZ 11-18-2014 Reviewed Quarterly Monitoring Report dated March 7, 2014 (Sept. 2013- January 2014). Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City. Potential off-site sources include the property of 149 29th Street and 822 4th Avenue, both located directly across (east) of the 72nd Precinct. In December 2013, LiRo collected soil and GW samples and sent them to FMC, as part of the treatability study (Klosur). The total VOC concentrations on site ranged from 11 ppb to 11,056 ppb. The total off-site VOC concentrations in off-site wells ranged from 19 ppb to 12,460 ppb. Free phase product was reported in injection well LIP-02 in January 2014. According to LiRo, there is a possibility that this free phase product could be attributed to the business located at LIP-02 (Address 149 29th Street. It belongs to active beverage distributor with constant truck

traffic and trucks parked on sidewalk). AZ 12-24-2014 The following email was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Quarterly Monitoring Report and Klosur Injection Work Plan for the above site, received on October 6, 2014. The Work Plan proposed injection of Klosur Persulfate. This Work Plan is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on and off site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Alex Zhitomirsky - Engineering Geologist 2 2-26-2015 Reviewed a monitoring report dated 7/23/2014. The report stated that there is a possibility that an off-site source is present on the east side of 29th Street. LiRo has opened discussions with the 149 29th Street property owner (beverage center) and will attempt to reach an access agreement to complete an investigation within the building in the areas where previous investigation had identified petroleum impacts and a possible tank anomaly. AZ 5-05-2015 Reviewed a monitoring report dated 02/25/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Klosur Persulfate Injection Work Plan was approved by NYSDEC, however, implementation is delayed due to NYC DDC budget issues. Five ISCO have been completed. Some total VOC concentrations reported increases. AZ 1-06-2016 Reviewed a monitoring report dated 05/28/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Legal representative of this property was contacted in the first quarter of 2015 and stated, he had not reviewed the Investigation Work Plan to date. The Klosur Persulfate Injection first round was completed in April 2015. Five ISCO have been completed. Some total VOC concentrations reported increases. AZ 5-05-2016 Reviewed a monitoring report dated 09/16/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Legal representative of this property was contacted in the first quarter of 2015 and stated, he had not reviewed the Investigation Work Plan to date. The Klosur Persulfate Injection first round was completed in April 2015. Four rounds of ISCO are anticipated. Some total VOC concentrations in groundwater reported significant increases. Total VOCs concentrations in groundwater were up to 12,000 ppb. Perdufate liberated/broke down the VOC sorbed onto the soil particles AZ 4-19-2017 Reviewed a monitoring report dated 09/29/2016. Off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. In June 2016, the 149 29th Street property owner signed an access agreement. LiRo is scheduling a limited boring program. Additional off-site injections utilizing Klosur Persulfate may be initiated following completion of the on-site treatment regime. In May 2016, damaged injection well LIP-05

was replaced. Total VOCs concentrations in groundwater were up to 4,100 ppb. AZ 6-6-2017 Reviewed a monitoring report dated 12/20/2016. On-site Post injection groundwater sampling results (August 2016) indicated the highest VOC concentrations in MW--06R2 (14,074 ppb). Off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. In June 2016, the 149 29th Street property owner signed an access agreement. LiRo is scheduling a limited boring program. Additional off-site injections utilizing Klozur Persulfate may be initiated following completion of the on-site treatment regime. AZ 9-13-2017 I have reviewed a report dated 3-01-2017In 2016 soil borings were advanced onsite. The soil sampling results were compared with the previous results. In seven borings VOC concentrations in soil decreased. In four borings VOC concentrations increased up to 1,409,500 ppb. One soil boring was advanced off-site. Six soil samples were analyzed, none reported any VOCs exceedances. Groundwater samples reported no VOCs exceedances. LiRo will determine, based on the soil and groundwater data, the need for additional injections. AZ"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ROMMEL C 3/11/03 - SAMUEL- File available in active unassigned spill files. 04/12/04 TRANSFERRD FROM ODOWD TO ROMMEL. 1/10/2006 - Haggerty - Leigh Gutterman from NYC School Construction (718-472-8502) is locating necessary reports. She is requesting another week to find them 7/13/2006 - Haggerty - Leigh Gutterman from NYC School Construction mailed closure report on June 7, 2006. The report essentially is the original from 13 years ago. NYC School Construction included new groundwater samples (March 2006) to hopefully provide proof the site has been remediated. In 1993, 44 UST's were removed along with 15,000 cubic yards of petroleum contaminated soil which were properly disposed of. Due to the N,R subway running underneath 4th Avenue to the west of the property, excavation was restricted. All accessible soil was excavated. Post-excavation soil samples contain VOC's and SVOC's above TAGM mostly in the area adjacent to 4th Avenue. However, the time passed since the soil samples were taken as well as the fact that the recent groundwater samples are below TAGM, DEC has decided to close the spill. "

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was DEMEO 1:45 Spoke to PO Calvin Somers at 354-4357. He indicated that the USCG has responded to the site, and that there is an unrecoverable sheen in the Gravesend Anchorage. It is not impacting land and is not expected to. At this point they are unaware if the sheen is coming from a 65 foot self-propelled barge, called the Jet Trader, or from a 500 foot tanker called the Jag Pavitrie which is carrying an unknown amount of light oil-probably diesel. The CG has required both vessels to hire contractors to set up boom to contain any spilled oil and to determine the source. If the vessels refuse or are unable, the USCG will hire contractors. The wind is currently 15 knots. DEC is to call CG later for additional information. 10/31/03 TJD Old surface water spill. No further action possible. Spill

Cemetery removed 3 existing 550 gallon & 1 existing 4000 gallon motor fuel storage tanks & related pumps. They were replaced with 1 new 1000 gallon & 1 new 4000 gallon motor fuel storage tanks and 2 new BSA approved pumps on a concrete island with related piping and controls. Both tanks are Double-Walled Fiberglass. The 1000 gallon tank is for diesel. Nicholas Vislocky obtained a permit to do this work on July 25, 1994. Based on this information and that less than a liter of petroleum was apparently spilled, this spill is closed. "

DEC Region: 2  
DER Facility ID: 160128  
DEC Memo: "On June 29, 2000, DEC (Sigona) along with Handex (Hoashi, Tonn, and DeVoe) conducted a site visit at Former Mobil S/S, 987 4th Avenue, Brooklyn, which is currently occupied by a Taco Bell. According to Handex (Tonn) Mobil delivered a shipment of gasoline to the USTs which were partially decommissioned in 1988. Fenely & Nicol performed an investigation in 1988, and prepared a report in December 1989. Fenely and Nicol recovered approximately 250 gallons using a pump and treatment system. GTI became involved in 1992, and installed a groundwater sparging system to treat the remaining dissolved phased at the site. There were however, sporadic signs of free product over the years. There were at least 10-12 wells at the site in the previous investigations. Currently, there are only four groundwater monitoring wells, and four sparging wells. There is also a vapor extraction system at the site. A Stipulation Agreement was issued by DEC on July 7, 1995. The site is directly adjacent to a Subway which runs underneath 4th Avenue. There was no indications from Handex that the subway lines have ever been impacted. The vapor from the SVES was shut down in 1998, and was teated with carbon. DEC (O'Dowd) requested a test of the vapor from the sparge wells. In September 1999, Handex found 11,000 ppb total BTEX in SP-2 and 2,900 ppb BTEX in SP-3 and nd in SP1 and SP4. MTBE was relatively low. In November 1999, Handex found 3 feet of floating product in MW21 and has monitored on semi-annual basis only. The wells were last sampled in June 2000. Since November 1999 performed 3 vacuum truck visits and recovered free product, gaged for free product before and after each visit. Handex is not sure what the source of the free product in Well No. 21. Handex will continue to submit a semi-annual report which will be due in August 2000. Handex plans to conduct a soil investigation in Sept 2000. Handex will send the plan to DEC for review and approval. Meanwhile, the system will be shut down until Handex can determine the proximity of the contamination. The depth of groundwater is 38 feet below grade. 4/27/10 - M. MacCabe - Reinstallation of AS/SVE system has been completed except for connection to the power grid. Soil and GW were sampled when AS/SVE wells were constructed. Soil and GW contamination remain on-site. 5/21/10 - no activities this month. 6/23/10 - No activities this month. 7/26/10 - The quarterly site status update report was received. 9/29/10 - The quarterly site status update report showed no changes in groundwater concentrations. 10/27/10 - Electrical work was conducted on the AS/SVE system in preparation for hook up to the power grid. 11/24/10 - The quarterly site status update report was received. Groundwater concentrations generally remain constant. 3/01/11 - The SVE component of the on-site remedial system was placed on-line on 12/29/10 then back off line on 1/10/11. The quarterly site status update report was received. Groundwater concentrations generally remain constant. 3/28/11 - The AS/SVE system is expected to go back on line in early April. 4/25/11 - Maintenance of the AS/SVE system was conducted in late April. This included change out of the carbon filter for the SVE effluent stack. 6/28/11 - The quarterly site status update report was received. The consultant estimates that four pounds of total BTEX and 26 pounds of

**MOBIL S/S (Continued)**

**S106719530**

total volatile petroleum hydrocarbons were removed with the SVE/AS system by the end of 2010. 7/05/11 - Periodic O&M was conducted and carbon filter was changed. 8/29/11 - Periodic O&M was conducted and the carbon filter was changed in August. The August site status update report states that approximately 10.6 lbs of BTEX and 64.9 lbs of total volatile petroleum hydrocarbons have been removed from the subsurface since the rebuilt AS/SVE system went on line in December 2010. The AS/SVE system was temporarily shut down in anticipation of hurricane Irene. 9/12/11 - Periodic O&M was conducted and the carbon filter was changed in September. 12/20/11 - The quarterly report was received. The consultant states that approximately 18.72 pounds of total BTEX and approximately 93.77 pounds of total volatile petroleum hydrocarbons (TVPH) were recovered by the SVE/AS system during the entire operation period. However, the groundwater data are inconclusive. 12/27/11 - Effective January 1, 2012, the consultant working for ExxonMobil on this project will change from Kleinfelder to Groundwater and Environmental Services (GES). 2/29/12 - Staff met with representatives of ExxonMobil and GES on February 28 to discuss modifications to the AS/SVE system to improve its efficiency. Modifications of the system consist of installing a larger compressor and cycling the system to just two of the seven vapor extraction points at one time. 5/11/12 - The quarterly site status update report covering the last quarter of 2011 and the first quarter of 2012 saw received. Weekly O&M was conducted about once every two weeks. The AS and SVE points have been cycled to allow for larger flow rates in different areas. The data show continued decreases in BTEX concentration in on-site groundwater. 8/3/12 - The quarterly site status update report saw received. Periodic OM&M was conducted twice a month. Based on the sampling results from the June 15, 2012 groundwater sampling event, extraction wells SVE-3 and SVE-5 are the only wells on-site with dissolved-phase BTEX concentrations over 1,000 ug/L. Therefore, during the third quarter of 2012, sparging efforts will be focused on these areas, specifically utilizing sparge wells AS-1 & AS-2. Quarterly groundwater sampling is scheduled for September 2012. Semi-monthly O&M will continue. 10/23/12 - The quarterly site status update report saw received. Periodic OM&M was conducted twice a month. The data continue to show decreases in BTEX concentrations in groundwater. The SSUR also contained a request to to pulse the AS/SVE system (alternating one month of system operation and one month of system inactivity). The request was accepted. 01/28/13 - The quarterly site status update report was received. Periodic OM&M was conducted twice a month. The SVE system is now operated with periodic pulsing. The pulsing consists of extracting from different points with others dormant and changing monthly. 4/12/13 - The quarterly site status update report was received. System O&M activities were conducted twice per month during system operation in the first quarter of 2013. The system was temporarily shut down between January 2 and February 6, 2013 as part of system pulsing activities and to observe any changes in hydrocarbon recovery. The data show continued decreases in contaminant concentrations in groundwater The consultant states the approximately 147 lbs of hydrocarbons were recovered during this monitoring period and approximately 2,010 lbs of hydrocarbons have been recovered since system startup in December 2010. 5/23/13 - The groundwater data presented in the May 20, 2013 Groundwater & Environmental Services (GES) quarterly report and proceeding quarterly reports have shown consistent and significant decreases in BTEX concentrations

Remarks: throughout the operation of the existing AS/SVE system. Current BTEX concentrations in groundwater range from non-detect to 46 ppb. SVE system effluent has shown limited recovery in the last three quarters; presumably due to the lower contaminant concentrations in groundwater. Based on the findings, discontinuation of the AS/SVE system was deemed acceptable and the spill was closed. "

DEC Memo:	"3/24/06 - Raphael Ketani. I finally made contact with someone at the super's phone at (718) 851-1328. I had been trying since yesterday. Maria, a maintenance worker there, answered and said that Ms. Ohanna wasn't in, but would be back in the afternoon. I asked her if there were any odors in the building and she said she didn't smell anything. I asked her about the oil spill and she said she wasn't aware of any oil spill or any problems with the heat. I asked Maria where I can send a letter that would reach Ms. Ohanna. She said to send it to P.O. Box 200289, Brooklyn, 11220. I told her that I will make a site visit at 2PM and that I wanted access to the basement. She said that she will let Ms. Ohanna know. I made the site visit. The odors were very strong (22 ppm) in the area of the twin 275 gallon tanks. However, there was only a slight indication that anything had ever spilled due to the absorbent sand on the floor below the front of the tanks. Ms. Ohana said that the service guy from Edward T. Miner Fuel Co. had stepped on a valve to one of the tanks and broke it. Later, I spoke to Mr. Chris Paulsen of the E.T. Miner Fuel Co. He said that there had been a leak from a broken cross over pipe and his crew had been over to repair it. He added that two days before, the tanks had held a large quantity of oil, but later

**OHANNA APARTMENT BUILDING (Continued)**

**S107658846**

they were dry. He suspected a 300 gal. loss. 4/24/06 - Raphael Ketani. I contacted Ms. Ohanna. I asked her what was the status of the cleanup. She said that her husband cleaned up all of the absorbent material and there is no odor. I told her I wanted to check and see for myself. She said that would be alright and she will call me with a date and time this week that would be good for her for a site visit. 5/17/06 - Raphael Ketani. I called Ms. Ohana and made an appointment for a site visit on 5/22 at 10:30AM. 5/22/06 - Raphael Ketani. I made a site visit at 10:15AM today. Ms. Ohana showed me that the oil company had come to her basement, cleaned up the spent Speedi Dri and had cemented over the floor under and around the tanks. I still detected 3900 ppb of volatiles with the PID. I told her that, to start, at least several soil borings and soil samplings have to be done around the tanks - and then maybe bioremediation. She said she has no money to do the work. I explained to her to contact either the oil company's or her own insurance to possibly get them to hire someone. She said she will try. 5/23/06 - Raphael Ketani. I received a call from Ms. Ohana. She said that she had all of the oil system piping replaced because her new oil company told her that E.T. Miner Fuel didn't do the job right and that the oil was still leaking out. She asked me to take a look at the pipes and close the case. She said she has no money to do the borings. I told her that the issue wasn't the pipes, but the estimated 300 gals. of oil that leaked into the ground below the tanks. I asked her for the phone number of E.T. Miner Fuel (718) 439-5066 and spoke to Karen at Miner Fuel. She passed me to Christopher of Miner Fuel. He explained that he tried to work with her, but she didn't want to pay for an investigation and remediation. 5/24/06 - Raphael Ketani. I called Ms. Ohana and talked to her about having one soil sample taken above the water table, instead of a series of borings and samples. I told her the sample needs to be taken to find out if her oil spill reached the water table. I gave her a list of contractors over the phone without preferring anyone. She said she was willing to do this and that she will get back to me when she finds a contractor. 5/25/06 - Raphael Ketani. I received a message from Ms. Ohana and returned her call. She said she contacted an environmental company from the list I had given her regarding doing one soil boring and taking one soil sample. She said they wanted \$3000. She said she doesn't have that kind of money and that I am driving her out of business. She claimed she may have to take out a loan and she needs the money to fix up her building. She asked that I come to her building one more time with the PID. She said I will not find any odors now as she and her husband have used ammonia and the deoderant powder and have cleaned everything up. I tried to explain to her, though she didn't seem to grasp the idea, that the issue is oil in the ground, not vapors. I told her I still needed one soil sample and to call Eastmond & Son who, I told her, were willing to give her a good price. I asked her whether she will call Eastmond, but she didn't respond to my question. She asked whether she can have her husband do the drilling and take the sample themselves to a laboratory. I told her that wouldn't be satisfactory as it has to be a sample taken with clean sampling equipment. I told her to call Eastmond, but she seemed to be more agitated. With that, she hung up the phone. 5/26/06 - Raphael Ketani. I sent a letter to Ms. Ohana explaining what she needs to do as the next step in the spill investigation and that the state will do the work if she doesn't and back bill her. 6/5/06 - Raphael Ketani. Received a call from Dennis Femia of NYC HPD (718) 802-4506.

**OHANNA APARTMENT BUILDING (Continued)**

**S107658846**

He asked what the situation in the building's basement was and what happened with the oil. I told him and he said Ms. Ohana takes his Section 8 clients so he will try to help her. I spoke to Mr. Mungra of Eastmond after this. He said he will do one boring tomorrow in her basement. He will go down 4 feet and take a sample. If it's clean he'll stop if it's dirty he'll try at 6 feet down and then maybe 8 feet. 7/5/06 - Raphael Ketani. I left a message for Isaac of Eastmond (718) 378-3000 to call me regarding the results of the soil boring. 7/18/06 - Raphael Ketani. I spoke to Isaac of Eastmond. He said that he has the soil sample analytical results. He said he will FAC them to me. 7/20/06 - Raphael Ketani. I tried calling Isaac, but could only leave a message on his cell phone (646) 879-6703. 7/26/06 - Raphael Ketani. I received a FAX today from Isaac of Eastmond with the analytical results for the one soil boring that was taken. There were no VOC hits, and the SVOC hits were either below TAGM or just slightly above it. Based upon this document and the documents in the record, I am closing this case. 8/17/06 - Raphael Ketani. Ms. Ohanna called up to inquire as to whether the spill case was closed. I told her it was. She asked for a DEC letter stating that the spill case is closed. I sent her one today. "

Remarks: "oil company deleivered fuel here two days ago and then customer called last night abnd said they were out of fuel: cross over split:"

	DEC Memo:	<p>"2/16/17 - Oblgado - As part of an off-site investigation into 4th and 25th Spill cases #9305122, I conducted a complete file review and identified a tank test failure report for 207 25th street. According to the file, this site had a 550 gallon #2 diesel UST which failed a tightness test on 9/10/1993. As a result of this file review, the DEC under PIN # 93256 conducted a subsurface investigation around the former suspected tank with the current owner's permission. 4 borings were advanced, 2 within the building, 1 in the sidewalk adjacent to the fill port and 1 down gradient on the 737 4th Avenue Duncan donuts property. Soil and groundwater contamination was identified in all 4 soil borings. Contamination was found as shallow as 8 ft bgs. The soil data and groundwater confirm that the 1993 tank test failure resulted in a petroleum discharge to soil and groundwater. 3/21/17 - Oblgado - Final Phase II report received from Envirotrac. The report documents investigations at 3 properties - 207 25th Street, 213 25th Street, and 276 24th Street. The report concludes that the former UST system at the 207 25th Street property was a contributing source to the over all Spill. However, based upon prior investigations, prior laboratory analysis of product samples, the overall extent of the impacted area and the volume of free product observed in the wells</p>

207 25TH STREET (Continued)

S120702900

over the years, it is EnviroTrac's professional opinion that the property at 207 25th Street was not the sole source for the petroleum release. With regards to the 276 -280 24th street building the subsurface investigation was inconclusive because although no evidence of soil contamination was observed, the soil probes were not installed deep enough to confirm the absence of soil contamination below the suspect tank. This was because the investigaiton was done with a small geoprobe due to access limitations which could not penetrate the tight clay formation below 10-12 ft. With regards to the 213th 25th Street site the report concludes that based on the absence of contamination in the shallow 213 B-1 boring, the abandoned 1000 gallon #2 fuel UST had not leaked prior to its abandonment 4/4/17 - Obligado - I sent a letter to Sandi Fung of PSJC LLC, cc to DEC Vought, Austin, Urda and AOG Judith Karpen, requiring a UST assessment (via either geophysical or intrusive methods) in the vicinity of the suspected UST to determine if the source tank was still present beneath the site and acting as a continued source for soil and groundwater contamination. I required the report be submitted within 90 days of receipt of the correspondence. 4/5/07 - Obligado - I spoke with Sandi Fung. I provided her a list of tank contractors and the tank closure document from 1994. 5/19/17 - Obligado - Tom Gallanger, GEM (914) 382 8673. He has been hired by Sandi Fung to investigate the tank. 6/12/17 - Obligado - I got an email from Sandi requesting additional time to due the investigation as her contractor was not responsive. I told her that was fine." "Subsurface investigation identified soil and groundwater contamination."

Remarks:

**FINDS:**

Registry ID: 110004374114

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was TIBBE 06/13/05: A heating contractor, Roy Kay, Inc., was modifying the roof top heating units to operate on dual fuel. While bleeding the lines of air, the operation was left unattended and an unknown amount of heating oil was released to the roof and apparently impacted a roof drain leading to a NYCDEP sewer. It is unsure how much was lost because of an unexplained inventory discrepancy. At the time of the spill, both boilers were turned off but the facilities Dravo unit (another type of heating unit) and water heater were still active. Also, in order to bleed the roof top lines, an unknown amount of product was pumped off and most likely removed by the contractor; yet there was a discrepancy of 242 gallons. Also, the contractor did not inform NYCT or make notification to DEC of the spill at the time it happened. The contractor attempted to perform the cleanup without telling anyone. Once discovered, NYCT hired an emergency response contractor to remove all of the contaminated debris already generated

Remarks: by the heating contractor and to finish the remaining cleanup. This did not allow NYCT to accurately determine the extent of the spill, nor the possible amount lost. The tank is and was at that time, a double walled fiberglass tank with interstitial monitoring and double walled piping with leak monitoring sump sensors. There is no record of any alarms from the interstitial or sumps sensors and no report of a loss of product in any of the log books. It would appear that the tank was not leaking but that product was being with drawn from the tank for several reason and that the product was no accounted for. "tank was being filled - is a roof unit and 100 - 150 gals of oil were spilled in the filling process"

 Updated By: JHOCONNE

Site Description: The site is located along the Upper New York Bay, in the Sunset Park Section of Brooklyn, in the western part of Kings County, New York. The site borders an access road referred to as Marginal Street (which parallels 1st Avenue), between 45th and 50th Street. The land immediately adjacent to the site is used for commercial and industrial purposes, although residential housing areas are present within approximately 1,500 to 2,000 feet of the site. The 17.3-acre site includes approximately 14 acres of urban land that was created by landfilling between four piers that were part of the former Bush Terminal warehouse complex. The remaining pier structures are dilapidated and extend 600 to 800 feet into the Bay from the existing fill areas. The site is currently fenced to prevent public access. The total landfill area is approximately 14 acres in size. Partial filling between two piers (Piers 3 and 4) has resulted in the presence of two ponded areas in the northeastern portion of the site. While most of the landfilled areas are covered with grasses or barren soils, the westernmost fill area between Piers 2 and 3 supports an area of mature trees (referred to as the existing wooded area). Debris piles are present in some areas, especially along the edge of the site bordering Marginal Road. The Site Investigation (SI) was conducted between May 1999 and May 2001. The field activities and findings of the investigation are described in the SI report. Additional studies were conducted between March and July 2002 to support the evaluation of remedial alternatives and are described in the Remedial Alternatives Report (RAR). This site is being tracked under the Environmental Restoration Program (ERP) as site number B00031-2.

Env Problem: The primary contaminants of concern at the site (in groundwater, soils and sediments) that exceed their SCGs are semivolatile organic compounds (SVOCs) and inorganics (metals). VOCs, the pesticide 4,4-DDT, and PCBs were also detected at levels exceeding SCGs, but to a much lesser extent than the SVOCs and metals. Sampling has revealed contravention of groundwater standards by 23 organic chemicals and 12 metals. It has been determined that no significant threat exists to the environment. While groundwater quality at the site has been impacted, it is unlikely that surface water quality criteria will be exceeded when groundwater discharges to the Bay, due to the low rates of groundwater discharge and the relatively low concentrations of contaminants in groundwater. Therefore, groundwater is not expected to present a potential environmental impact.

Health Problem: The area is served by public water, therefore, exposure to contaminated groundwater is unlikely. There is a potential for direct

contact exposure with contaminated surface soil. However, a clean soil cover over the site and landfill gas control measures will minimize the potential for exposures to future park users. Site access is currently restricted by a fence minimizing the potential for exposure.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 04/27/05- Bureau B, unassigned, due to low priority. Transferred from R-2. 12/20/06- reassigned to Chris Milack, Central Office (Milack) 12/29/06- Groundwater investigation work plan approved. Plan calls for sampling of 3 wells on property that were previously installed for the investigation of spill #93-05122. (Milack) 5/24/07- GW investigation report was received 5/18/07. Two wells were sampled, one well was dry. Both wells had concentrations of MTBE that exceeded standards. Consultant will be submitting an additional investigation WP. Quarterly sampling will continue. 7/2/08 - Haggerty: assumed project management from Chris Milack 9/19/08 - Haggerty: approved SI workplan 11/25/08 - Haggerty: SI workplan altered due to the presence of oil-cooled high pressure gas mains along 24th Street. See email and revised figure in edocs 4/20/09 - Haggerty: approved SIR with the following comments: 1. Add Tertiary Butyl Alcohol (TBA) to the groundwater sampling protocol. 2. The 12 abandoned 550gal tanks must be removed as well as the former dispenser areas. Provide a UST Removal work plan within 60 days of the receipt of this email. 3. I agree with waiting 2 quarters before further groundwater delineation, if any, is performed. 6/19/09 - Haggerty: had conference call with Ken Drake from ExxonMobil and Kleinfelder. ExxonMobil states they are not willing to remove the tanks because there is an issue of who owns the tanks. They will gather more information and get back to me. PM forwarded this spill to Scott Owens (OGC) for follow-up May 2010 - Due to various underground utilities, off-site delineation is proving to be difficult. PM instructed Mobil to get access to a property across 24th Street to install a MW. This appears to be our only option of delineation at this time. Discontinued EFT events due to poor

S100144732

recovery, really tight soil July 2010 - EM granted access to off-site location to complete delineation August 2010 - Offsite well well installed 8/3 February 2011 - offsite well show high levels of gasoline contamination (20,000ppb BTEX) but little MTBE. On-site contamination predominately MTBE June 2011 - SSUR overdue July 2011 - reviewed SSUR. EM continues to only propose continued gw sampling when the site obviously needs active remediation. Left message with Jackie Fawcett, EM, to discuss August 2011 - sent email requiring ExxonMobil to submit a Pilot Test work plan to address both soil and groundwater contamination within 45 days (due 9/17/11) Sept. 2011 - approved Feasibility study work plan for SVE/AS January 2012 - EM switched consultant's to GES. SVE/AS pilot test failed, not viable. Heavy BTEX dissolved concentrations encountered in new wells (50,000+ppb) February 2012 - discussing the site on 2/28/12 when EM and GES come to Albany. My conceptual model changed since the new gw data came in April 2012 - EM's SVE pilot test was a complete failure based on the lithology. Tank/line removal, over-excavation is the only viable solution to source removal. EM states they won't remove the tanks because some were sold to the owner. PM needs assistance from OGC August 2012 - With OGC's involvement, EM has agreed to drill through the tanks which will only prove that EM is responsible for removing the tanks December 2012 - Wells in the former tank area should have been installed at this point but I was unable to confirm with the GES PM. January 2, 2012 - according to GES Project Manager, installation of tank field wells was delayed. Installation will begin 1/8/13 May 2013 - OGC and EM legal contacted regarding this site. The groundwater is grossly contaminated (80,000ppb of VOCs). Dept. required EM to excavate the source (old tanks and associated contaminated soil) but EM won't sign a Consent Order or perform the work. EM already performed an SVE/AS pilot test which failed. Now, EM wants to perform another SVE pilot test October 28 2013 - ExxonMobil has agreed to sign the Consent Order and remove the tanks and contaminated soil. Workplan due in 30 days December 2013 - PM sent comment letter to ExxonMobil. The work plan was revised and resubmitted. Currently under review January 6, 2014 - revised workplan approved April 2014 - Excavation work plan approved in January but we are still waiting on the access agreement with the property owner September 2014 - Haggerty: excavation per the RAP complete January 2015 - Haggerty: post-excavation MWs installed. PM required 4 quarters of performance groundwater monitoring."  
Remarks: "TANK-TEST FAILURE. ISOLATE, REPAIR, AND RE-TEST."

DEC Memo:

Remarks: "07/13/09-Vought-Primary off-hours responder. Vought called and spoke to John Geitner (908-358-3436) and spill of approximately 1 gallon spray caused by failed gasket on a piping manifold resulting into oil spray on barge containment and on dock. One gallon total estimate of spill. Kens Marine onsite to clean dock and barge pan. Sheen observed in Gowanus as a result. Spill closed by Vought due to insignificant spill amount to surface water and immediate response by Hess."  
"# 6 oil sprayed while bardge transfer. Kens marine will be responding for clean up at this time."

DEC Memo: "02/29/13 - LZ The 01/26/12 report by EnviroTrac Ltd.(eDocs) notes that from October to December 2011, 0.86 gallon of LNAPL was recovered. Hess to continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. The next update report, which will summarize site activities from January 2012 through March 2012, will be submitted to NYSDEC in April 2012. 12/16/11 - LZ The October 2011 Report by EnviroTrac Ltd.(eDocs) notes that in July 2011 September 2011 30 monitoring wells were gauged and enhanced fluid recovery conducted on select wells. LNAPL (max): July: 0.29 feet (MW-13); August: 0.26 feet (RW-1); September: 1.01 feet (MW-13) LNAPL Recovered: 1.61 gallons (this monitoring period) LNAPL Recovered: 2,614 gallons (to date).Hess will to continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. The next update report, which will summarize site activities from October 2011through December December 2011, will be submitted to NYSDEC in January 2012. 09-19-11- LZ The April - June 2011 Report in eDocs. The next report in October 30, 2011. 05/03/11 - LZ The Update Report, dated April 29, 2011 by EnvironTrac, summarizes remedial activities from January to March 2011(eDocs). Twenty nine monitoring wells and one recovery well were gauged monthly. Enhanced fluid recovery was performed weekly on selected wells. Total of 0.31 gallon of free product was recovered. Hess will continue monthly well gauging and weekly enhanced fluid recovery. In addition, Hess will explore other options of free product recovery. The next report will be submitted in July 2011. 01/20/11 - LZ The January 17, 2011 quarterly report (eDocs) shows that the facility conducts weekly vacuum enhanced fluid recovery. Slightly more than 1 gallon of free product was recovered. The next report will be submitted in April 2011. 11/2/10 - LZ The October 25, 2010 quarterly report (eDocs) shows that the facility conducts weekly vacuum enhanced fluid recovery. Slightly more than 0.2 gallon of free product was recovered. The highest thickness of free product was noted in MW-13 (0.25 foot). 11-2-10 - LZ The Update Report, dated July 30, 2010, by EnvironTrac, summarizes remedial activities from April through June 2010 (eDocs). Twenty nine monitoring wells and one

**HESS BROOKLYN TERMINAL (Continued)**

**S102141580**

recovery well were gauged monthly. Enhanced fluid recovery was performed weekly on selected wells. Total of 2,175 gallons of fluids were recovered, and 0.21 gallon of free product were recovered. Hess will continue monthly well gauging and weekly enhanced fluid recovery

05/12/10 - LZ The April 30th quarterly report (eDocs) shows that the facility conducts weekly vacuum enhanced fluid recovery. The highest thickness of free product was noted in RW-1 (0.93 foot). 01/28/10 - LZ Reviewed the EnviroTrac Ltd January 28, 2010 quarterly report (eDocs) containing recovery data from October 2009 through December 2009. The report shows that 1.79 gallons of free product were recovered during this period. The highest thickness of free product was in RW-1 (0.9 foot) and 10 wells of 30 total monitoring wells exhibited the presence of free product. 02/18/10 - LZ Reviewed the January 28, 2010 Remedial Action Plan (RAP)(eDocs) prepared by EnviroTrac Ltd. The RAP provides the status of remediation at the site and evaluates four methods that might be used to expedite the remedial process; excavation, chemical injection, groundwater treatment, and enhanced fluid recovery are assessed by their feasibilities and associated risks. Approved your recommendation that enhanced fluid recovery be continued since EnviroTrac Ltd asserts that only this remedial option does not compromise the integrity of storage tanks. NYSDEC requires that the frequency of enhanced fluid recovery be increased temporarily from twice a month to weekly. Starting March 1, 2010, the weekly events must be performed for at least six months. After this period, recovery data will be evaluated, and a future configuration of enhanced fluid recovery will be determined. 01/28/10 - LZ I received the January 28, 2010 quarterly report (eDocs) containing recovery data. It is under review. 10/29/09 - LZ As a result of today's meeting between DEC and Ed Russo of EnviroTrac and Donald Bull of Hess-Woodbridge, by February 1, 2010, NYSDEC will receive a report on the extent of contamination and the evaluation of feasible options to expedite remediation in the area south of Tanks 9409 and 9410. 10/08/09 - LZ EnviroTrac e-mailed missing information about volume of recovered LNAPL (eDocs). 09/25/09 - LZ The September 16, 2009, EnviroTrac report (eDocs) provides the results of monthly gauging of 29 monitoring wells and 1 recovery well. Eleven wells exhibited LNAPL. In January, the maximum thickness was 0.55 foot (MW-8a); February - 2.16 feet (MW-13); March - 0.32 (RW-1); April - 0.56 foot (RW-1); May - 0.59 foot (MW-13); June - 0.84 foot (RW-1); July - 0.26 foot (MW-13); August - 1.15 feet (MW-13); and September - 0.31 foot (RW-1). No information about volume of recovered free-phase product (I e-mailed them requesting this information and a meeting on October 29th). The report was received with a delay because miscommunication between Hess and EnviroTrac (this consultant replaced Delta Consultants, Inc). The next report before January 31, 2010. 03/10/08 - LZ During November 2007 - January 2008, 6,25 gallons of LNAPL were recovered, a Delta Consultants, Inc. quarterly report informs. Enhanced fluid recovery events were conducted twice a month at a number of monitoring wells that reveal the presence of free product. On November 13, 2007, the highest thickness of LNAPL was in MW-13 (0.67 feet) and in RW-1 (0.38 feet). On November 11, 2007, MW-13 revealed 0.77 feet of LNAPL and RW-1 0.33 feet. On January 9, 2008, MW-13 had 0.88 feet of free product and RW-1 had 0.29 feet of free product. Delta Consultants, Inc., propose continuation of bi-monthly recovery activities. 12/12/07 - Zielinski Delta Environmental Consultants' report covers August-October 2007 free product recovery activities. According to the report, 6.61

gallons of LNAPL were removed in this period. Since June 1998, when recovery system was installed, 2,518 gallons of LNAPL were recovered. Free product was detected in a number of wells: MW-8 (0.01 feet), MW-8A (0.14 feet), MW-13 (0.5 feet), RW-1 (0.26 feet), MW-15 (0.32 feet), MW-19 (0.05 feet), MW-17 (0.27 feet), and MW-20 (0.13 feet). Delta, on behalf of Hess, intends to continue twice-a-month operations using the enhanced fluid recovery system. 08/31/07 - Zielinski Delta Environmental Consultants, Inc., provides a report on remedial activities for May -July 2007. Total 5.56 gallons of LNAPL were recovered. In May, LNAPL was recovered from wells MW-8A 0.07 MW-13 0.08 feet, MW-17 0.17 feet, MW-20, 0.08 feet, RW-1 0.08 feet. In June, LNAPL was recovered from MW-8 0.07 feet, MW-8A 0.05 feet, MW-13 0.03 feet, MW-17 0.06 feet, MW-19 0.06 feet, MW-20, 0.07 feet, RW-1 0.40 feet. In July, LNAPL was recovered from MW-8 0.07 feet, MW-8A 0.12 feet, MW-11 0.11 feet, MW-13 0.39 feet, MW-14 0.28 feet, MW-15 0.08 feet, MW-20 0.16 feet, RW-1 0.15 feet. since 1990, 2,541 gallons of free product were recovered. The next progress report will be submitted on December 8, 2007. 06/22/07 - Zielinski Delta Environmental Consultants, Inc., in its report of June 8, 2007, provides information on the quantity of LNAPL recovered during February- April 2007. Total of 5.36 gallons of LNAPL was pumped out from wells MW-8A, MW-13, MW-14, MW-20, and RW-1. Since June 1999, 2,506 gallons of free product have been recovered. The next progress report will be submitted on September 8, 2007. 03/21/07 - Zielinski A site status report, prepared by Delta Environmental Consultants, Inc., includes data collected during November 2006 to January 2007. LNAPL was recovered from wells MW-13, MW-17, RW-1. Free product was also found in MW-8, MW-8a, MW-11, MW-12, MW-13, MW-14, MW-19, MW-20. The next progress report will be submitted on June 8, 2007. 12/15/06 - Zielinski The Fourth Quarter STIP Agreement Progress Report, prepared by Hess Corporation, indicates that free product exists in Wells MW-13 and MW-8(RW1). The facility uses an enhanced fluid recovery system to remove LPH. Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ZHAO This spill site has been consolidated under spill No. 9002896. 4/21/04 - This project is re-assigned to Zhao from Sigona. 06/29/12 - THIS SPILL CASE HAS BEEN TRANSFERRED TO SECTION B ON 06/29/12 AS DISCUSSED WITH RANDY AUSTIN 08/01/2012 V. Brevdo Received Update Report from Envirotrac covering period from April through June 2012 monitoring period. Report is dated July 31, 2012. Reviewed report. Brevdo 07/31/2013 V. Brevdo Received Update Report from Envirotrac covering period from April through June 2013 monitoring period. Report is dated July 31, 2013. Reviewed Report. E-mail from Joseph Rennie of Envirotrac: Dear Mr. Brevdo, Attached please find the Update Report for the above referenced Hess terminal. This report contains data collected from the April through June 2013 monitoring period. As per your earlier request, I will be compiling a CD with all the 2013 quarterly reports for this site later this year. If you have any questions regarding this report, please do not hesitate to contact Matt Butler (Hess) at (732) 750-6624. Sincerely, Joseph Rennie Project Manager Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com 02/24/2014 - EnviroTrac submitted Update Report dated February 6, 2014. This report contains data collected from October through December 2013. The next update report, summarizing activities conducted from January through March 2014 will be submitted to NYSDEC in April 2014. VB 02/25/2014 - V. Brevdo Project

Status: Hess Terminal, 722 Court Street, Brooklyn (Spill No. 9002896)  
This is active Hess Terminal and Major Oil Storage Facility (MOSF) with the storage capacity of more than 400,000 gallons of petroleum products. The facility is located on the northern bank of Gowanus Canal estuary, opposite to the Hamilton Avenue Marine Transfer Station, which is on the southern bank of canal. The spill case was opened due to an equipment failure: during construction a free product was found on the groundwater table on the site. Initial response included pumping of water/petroleum mixture into a tank track. Remediation of the site is implemented under the Stipulation Agreement executed on September 8, 1998. On February 24, 2014, EnviroTrac submitted Site Status Update Report for the Fourth Quarter of 2013 which contains remediation information and data collected from October through December 2013. On October 24 and November 19, 2013, EnviroTrac gauged 30 monitoring wells and conducted enhanced fluid recovery (EFR) events on three wells to recover detected free product LNAPL. A total volume of fluids recovered during fourth quarter of 2013 was 9,000 gallons, and total volume recovered to date is 628,839 gallons. Maximum thickness of LNAPL product varied from 0.18 feet in October 2013 to 0.66 feet in November 2013. Hess will continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. The next update report, which will summarize site activities from January 2014 through March 2014 will be submitted to the Department in April 2014. 02/25/2014 - V. Brevdo Sent e-mail to Joseph Rennie of Envirotrack containing five (5) Comments-Questions on February 6, 2014 Site Status Update Report. VB. 03/03/2015 - V. Brevdo EnviroTrack submitted Update Reports dated 4/30/14; 07/31/14; 11/28/14; and 02/25/15. VB 03/10/2015 - V. Brevdo Project Status Update: Hess Terminal, 722 Court Street, Brooklyn (Spill No. 9002896) This is active Hess Terminal and Major Oil Storage Facility (MOSF) with the storage capacity of more than 400,000 gallons of petroleum products. The facility is located on the northern bank of Gowanus Canal estuary, opposite to the Hamilton Avenue Marine Transfer Station, which is on the southern bank of canal. The spill case was opened due to an equipment failure: during construction a free product - No. 6 fuel oil - was found on the groundwater table on the site. Initial response included pumping of water/petroleum mixture into a tank track. Remediation of the site is implemented under the Stipulation Agreement executed on September 8, 1998. On March 3, 2015, EnviroTrac submitted Site Status Update Report for the Fourth Quarter of 2014 which contains remediation information and data collected from October through December 2014. On October 30, November 18, and December 17, 2014, EnviroTrac gauged 30 monitoring wells and conducted enhanced fluid recovery (EFR) events on selected wells to recover detected free product LNAPL. A total volume of fluids recovered during fourth quarter of 2014 was 1,820 gallons, and total volume recovered to date is 655,545 gallons. Maximum thickness of LNAPL product varied from 0.42 feet in October 2014 to 1.85 feet in November 2014 and to 0.61 feet in December 2014. Hess will continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. On March 10, 2015, the Department requested Hess and EnviroTrac to provide an estimated volume of LNAPL remaining in the subsurface as well as estimated time frame for the completion of LNAPL removal in the next April 2015 project update report. VB 05-01-2015 - V. Brevdo Hess Terminal, 722 Court Street, Brooklyn (Spill No. 9002896) This is active Hess

Terminal and Major Oil Storage Facility (MOSF) with the storage capacity of more than 400,000 gallons of petroleum products. The facility is located on the northern bank of Gowanus Canal estuary, opposite to the Hamilton Avenue Marine Transfer Station, which is on the southern bank of canal. The spill case was opened due to an equipment failure: during construction a free product - No. 6 fuel oil - was found on the groundwater table on the site. Initial response included pumping of water/petroleum mixture into a tank track. Remediation of the site is implemented under the Stipulation Agreement executed on September 8, 1998. On April 30, 2015, EnviroTrac submitted Site Status Update Report for the First Quarter of 2015 which contains remediation information and data collected from January 2015 through March 2015. On January 26, February 23, and March 30, 2015, EnviroTrac gauged 30 monitoring wells and conducted enhanced fluid recovery (EFR) events on selected wells to recover detected free product LNAPL. A total volume of fluids recovered during first quarter of 2015 was 2,075 gallons, and total volume recovered to date is 657,620 gallons. Maximum thickness of LNAPL product varied from 0.25 feet in January 2015 to 0.21 feet in February 2015 and to 0.47 feet in March 2015. Hess and EnviroTrac will continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. EnviroTrac will submit the update report for the second quarter of 2015 in July 2015. The Department communicated to EnviroTrac that shall they believe they can accomplish further reduction of the free product thickness at the site, they shall provide estimate and evaluation for methodology and time frame to complete the remedy. If it is not feasible to further reduce product thickness within reasonable time frame (one to two years from now), EnviroTrac shall evaluate whether environmental conditions accomplished so far are protective of the human health and the environment for the contemplated use of this property, in which case it may not be environmentally beneficial to continue keeping this spill case open. The Department is focused on completing the remedy and bringing this long term spill case to a closure status. VB 11-17-2015 - V. Brevdo Hess Terminal, 722 Court Street, Brooklyn (Spill No. 9002896) This is active Hess Terminal and Major Oil Storage Facility (MOSF) with the storage capacity of more than 400,000 gallons of petroleum products. The facility is located on the northern bank of Gowanus Canal estuary, opposite to the Hamilton Avenue Marine Transfer Station, which is on the southern bank of canal. The spill case was opened due to an equipment failure: during construction a free product - No. 6 fuel oil - was found on the groundwater table on the site. Initial response included pumping of water/petroleum mixture into a tank track. Remediation of the site is implemented under the Stipulation Agreement executed on September 8, 1998. On November 16, 2015, EnviroTrac submitted Site Status Update Report for the Third Quarter of 2015 which contains remediation information and data collected from July 2015 through September 2015. On July 23, August 25, and September 23, 2015, EnviroTrac gauged 30 monitoring wells and conducted enhanced fluid recovery (EFR) events on selected wells to recover detected free product LNAPL. A total volume of fluids recovered during third quarter of 2015 was 1,605 gallons, and total volume recovered to date is 660,245 gallons. Maximum thickness of LNAPL product varied from 0.57 feet in July 2015 to 0.44 feet in August 2015 and to 0.51 feet in September 2015. Hess and EnviroTrac will continue monthly well gauging and EFR events with the

installation of absorbent socks in wells that contain product. EnviroTrac will submit the update report for the fourth quarter of 2015 in January 2016. VB 02-12-2016 - V. Brevdo On February 12, 2016, EnviroTrac submitted Site Status Update Report for the Fourth Quarter of 2015 which contains remediation information and data collected from October 2015 through December 2015. On October 28, November 24, and December 16, 2015, EnviroTrac gauged 27 monitoring wells and conducted enhanced fluid recovery (EFR) events on selected wells to recover detected free product LNAPL. A total volume of fluids recovered during fourth quarter of 2015 was 3,038 gallons, and total volume recovered to date is 663,283 gallons. Maximum thickness of LNAPL product varied from 0.78 feet in December 2015 to 0.51 feet in October 2015 and to 0.46 feet in November 2015. Hess and EnviroTrac will continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. EnviroTrac will submit the update report for the first quarter of 2016 in April 2016. 05-31-2016 - V. Brevdo On May 31, 2016, EnviroTrac submitted Site Status Update Report for the First Quarter of 2016 which contains remediation information and data collected from January 2016 through March 2016. On January 29, February 22, and March 18, 2016, EnviroTrac gauged 20 to 30 monitoring wells and conducted enhanced fluid recovery (EFR) events on selected wells to recover detected free product LNAPL. A total volume of fluids recovered during first quarter of 2016 was 2,621 gallons, and total volume recovered to date is 665,904 gallons. Maximum thickness of LNAPL product varied from 0.35 feet in January 2016 to 0.65 feet in February 2016 and to 0.19 feet in March 2016. Hess and EnviroTrac will continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. VB 08-03-2016 - V. Brevdo On August 3, 2016, EnviroTrac submitted Site Status Update Report for the Second Quarter of 2016 which contains remediation information and data collected from April 2016 through June 2016. On April 18, May 18, and June 29, 2016, EnviroTrac gauged 20 to 30 monitoring wells and conducted enhanced fluid recovery (EFR) events on selected wells to recover detected free product LNAPL. A total volume of fluids recovered during second quarter of 2016 was 1,470 gallons, and total volume recovered to date is 667,374 gallons. Maximum thickness of LNAPL product varied from 0.20 feet in April 2016 to 0.22 feet in May 2016 and to 0.33 feet in June 2016. Hess and EnviroTrac will continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. VB 11-17-2016 - V. Brevdo Former Hess Terminal Active Buckeye Terminal, 722 Court Street, Brooklyn (Spill No. 9002896) This is active Buckeye Terminal and Major Oil Storage Facility (MOSF) with the storage capacity of more than 400,000 gallons of petroleum products. The facility is located on the northern bank of Gowanus Canal estuary, opposite to the Hamilton Avenue Marine Transfer Station, which is on the southern bank of canal. The spill case was opened due to an equipment failure: during construction a free product - No. 6 fuel oil - was found on the groundwater table on the site. Initial response included pumping of water/petroleum mixture into a tank track. Remediation of the site is implemented under the Stipulation Agreement executed on September 8, 1998. As of September 2016, Rubicon Environmental, LLC (Rubicon) has taken over project management responsibilities for this project from EnviroTrac. On November 16, 2016, Rubicon submitted Site Status Update Report for the Third Quarter of 2016 which contains remediation information and

**HESS BROOKLYN TERMINAL (Continued)**

**S102141580**

data collected from July 2016 through September 2016. On July 14, August 22, and September 20, 2016, EnviroTrac gauged 28 monitoring wells and conducted enhanced fluid recovery (EFR) events on selected wells to recover detected free product LNAPL. A total volume of fluids recovered during third quarter of 2016 was 2,128 gallons, and total volume recovered to date is 669,502 gallons. Maximum thickness of LNAPL product varied from 1.09 feet in July 2016 to 0.40 feet in August 2016 and to 0.13 feet in September 2016. Hess and Rubicon will continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. VB 02-28-2017 - V. Brevdo On February 24, 2017, Rubicon submitted Site Status Update Report for the Fourth Quarter of 2016 which contains remediation information and data collected from October 2016 through December 2016. On October 17, November 15, and December 16, 2016, Rubicon gauged 29 monitoring wells and conducted enhanced fluid recovery (EFR) events on selected wells to recover detected free product LNAPL. A total volume of fluids recovered during fourth quarter of 2016 was 2,909 gallons, and total volume recovered to date is 672,411 gallons. Maximum thickness of LNAPL product varied from 0.10 feet in October 2016 to 0.10 feet in November 2016 and to 0.35 feet in December 2016. Hess and Rubicon will continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. VB 05-09-2017 - V. Brevdo On May 8, 2017, Rubicon submitted Site Status Update Report for the First Quarter of 2017 which contains remediation information and data collected from January 2017 through March 2017. On January 12, February 27, and March 22, 2017, Rubicon gauged 29 monitoring wells and conducted enhanced fluid recovery (EFR) events on one well to recover detected free product LNAPL. A total volume of fluids recovered during first quarter of 2017 was 3,853 gallons, and total volume recovered to date is 676,264 gallons. Maximum thickness of LNAPL product varied from 0.28 of a foot in January 2017 to 0.03 of a foot in February 2017 and to 0.05 of a foot in March 2017. Hess and Rubicon will continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. VB 07-27-2017 - V. Brevdo On July 27, 2017, Rubicon submitted Site Status Update Report for the Second Quarter of 2017 which contains remediation information and data collected from April 2017 through June 2017. On April 19, May 18, and June 21, 2017, Rubicon gauged 29 monitoring wells and conducted enhanced fluid recovery (EFR) events on selected wells to recover detected free product LNAPL. A total volume of fluids recovered during second quarter of 2017 was 5,458 gallons, and total volume recovered to date is 681,722 gallons. Maximum thickness of LNAPL product varied from 0.22 of a foot in April 2017 to 0.04 of a foot in May 2017 and to 0.08 of a foot in June 2017. Hess and Rubicon will continue monthly well gauging and EFR events with the installation of absorbent socks in wells that contain product. VB 10-26-2017 - V. Brevdo On October 25, 2017, Rubicon submitted Site Status Update Report for the Third Quarter of 2017 which contains remediation information and data collected from July 2017 through September 2017. On July 19, August 23, and September 12, 2017, Rubicon gauged 29 monitoring wells and conducted enhanced fluid recovery (EFR) events on selected wells to recover detected free product LNAPL. A total volume of fluids recovered during third quarter of 2017 was 4,635 gallons, and total volume recovered to date is 686,357 gallons. Maximum thickness of LNAPL product varied from 0.22 of a foot in July 2017 to 0.07 of a foot in August 2017 and to

VOUGHT 8/1/02-VOUGHT-Spill is unrecoverable sheen. Source has been  
stopped. Spill closed by Vought."

Remarks: "caller had replaced the bottom of a tank after the work was  
completed the filled the tank w/ water from the canal to test it tank  
passed the test they then tested the water to confirm it was not  
contaminated water passed that test water started to be discharged to  
the canal and a small sheen was noticed at this poit they are not  
sure where the material is from the plan to test the water again and  
replace the hose and try again tomorrow spill at this poit does not  
seem to be recoverable "

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was  
DEMEO/OD Notes: Called Howald Goldman of Amerada Hess Corporation  
(732-750-7004) on 10/17/2002. The terminal is constructing a new  
bulkhead for the oil terminal. While driving sheet metal piles into  
the gowanus bay, a sheen started to appear( Grey and very light). The  
construction has a DEC and Army Corp. permit. work has being done  
over a month and is first time noticed. NRC case number is 626479.  
The station deployed a boom on the water and threw out absorbents  
however the they are not working. Spill appears to be contained  
within boom. Station contact is Michael Broughm at 718 330 1468. ARS  
10/17/02 TJD Demeo inspected site. Driving of sheet piles has  
disturbed contaminated sediment in canal. No spill has occurred."  
Remarks: "DURING DRILLING FOR BULKHEAD A SHEEN WAS NOTICED ON WATER SURFACE -  
APPEARS PRODUCT WAS DISTURBED FROM BOTTOM OF WATER"

Assessment of Health: Access to the site is restricted. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates soil vapor intrusion is not occurring on-site and is not a concern for off-site buildings.

Description: Location: The site is located at 688-700 Court Street within the Red Hook Industrial area of Brooklyn. The site is located southwest of the Court Street and Halleck Street intersection. Site Features: The site is relatively flat and mostly covered with blacktop and concrete. A small area in the southeast corner has a soil cover. Several previously decommissioned site buildings were either removed or rehabilitated without the Department's approval. The site is occupied by several tenants including a garbage hauling company, a motor coach repair facility, an electronics distribution warehouse, a commercial laundry repair business, a stone cutting business and a sheet metal fabricator. The dual-phase extraction remedial system is not operational. The site is surrounded with a concrete wall of varying height. Current Zoning and Land Use: The site is zoned for industrial use. The surrounding parcels are currently used for a combination of commercial, light industrial and recreational uses. The site is bordered immediately to the east by Court Street, National Grid and Spentonbush Red Star Companies, to the west by Clinton Street and American Import Export Trucking and to the south by Bryant Street and a Buckeye, LLC oil terminal. A recreational park (Red Hook Recreational) is located immediately to the north of the site. Past Use of the Site: Milliken Brothers Iron Works occupied the

southwestern portion of the site in 1904. In 1939 John F. McKenna, Inc. Lumber Yard, Marine Canvas Supply Corporation and John Menton Boiler Maker occupied the site. The site remained a lumberyard and marine canvas supply business until approximately 1958, when manufacturing at the site began. Historic manufacturing processes at the site include production of metallic-organic soaps and salts, phosphates and epoxy plasticizers. A hot-oil system, that used PCB containing oil, was part of the manufacturing process. Contamination at the site appears related to several historic operations, including materials handling from the chemical manufacturing processes, as well as releases to the environment from the hot oil system. Site Geology and Hydrogeology: The site was formed by backfilling the marsh and waterfront areas of the Gowanus Canal in the late 1800s through the early 1900s. Fill material consisting of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.) was observed across the site from ground surface to a depth of 12 ft. A clay layer of unknown thickness or continuity was encountered beneath the fill material. This layer is presumed to be the former base of the Gowanus Canal. The effectiveness of this layer as a low-permeability barrier between the overlying fill and the underlying water-bearing zone located within the glacial deposits beneath the site is unknown. Based on the manmade coastline (rip-rap, pile sheeting), well gauging data and the generalized hydrogeological cross-sections, a horizontal and somewhat radial (north, northwest, west, southwest, south) pathway for groundwater flow exists. Depth to water beneath the site has ranged from 2.0 ft to 9.0-ft bgs over the course of investigation. Groundwater beneath the site is minimally influenced by the tide. Groundwater flow is radial with a high point in the central part of the site.

**Actual:**  
**5 ft.**

Site Description:

Location: The site is located in the Red Hook section of Brooklyn, in the City of New York. The site is listed as Block 494, Lot 1 and is located on the south east corner of Court St. and Halleck St. in close proximity to the Gowanus Canal. Site Features: The site is currently a parking lot with a small building near the middle of the site occupying approximately 1/8th of the property acreage. Current Use: The site is currently leased from Red Hook Realty Co. by National Grid who is using the site as a parking lot for their service vehicles. Historical Use: The property was used for tar paper manufacturing as depicted in the 1886 Sanborn map which shows tar pitch storage areas on the corners of Smith St./Halleck St. and Court St./Halleck St. Site Geology and Hydrogeology: Based on geological information at an adjacent site, the groundwater at this property is anticipated to be less than 5 feet bgs. Groundwater flow is anticipated to flow radially from the Gowanus Canal traveling north, northwest, west, southwest, and south. To the south and west of the site, the coastline is lined with sheet piling and to the east of the site, where groundwater enters, the coastline is lined with rip rap. The groundwater is likely saline due to its proximity to the canal. Much of this area is reclaimed water front property with fill material anticipated to exist from 0 to 12 feet bgs. A gray colored, low permeability clayey layer (former base of the Gowanus Canal) is also anticipated to exist beneath the fill material with a thickness of approximately 8 feet.

Env Problem:

This site has had several instances over the last decade of tar seeping out of the ground, getting cleaned up, and reappearing some time later. Further investigation is required to determine the nature and extent of tar beneath the surface.

Health Problem:

As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Dump:

Site Description: Location: The site is located at 633 Court Street, Kings County, Brooklyn, New York. The facility is located within the Red Hook Industrial area of Brooklyn. The Site is located to the northeast of

MAP FINDINGS

**CHEMTURA 633 COURT STREET (Continued)**

**S113828311**

the Court Street and Halleck Street intersection. The site is immediately bordered to the south by Halleck Street and a National Grid truck facility, to the north by a carting and storage company and to the east by an office and storage building areas. A recreational park (Red Hook Smith Recreational Park) is located directly across Court Street to the west of the site. Additionally, an oil terminal (formerly Hess Oil Company and currently Buckeye) is located approximately one block to the south of the site. Site Features: The entire site is completely developed and covered with two connected buildings and a concrete slab. These buildings were formerly used for plant operations. Current Zoning and Land Use: The site is currently active, and is zoned for industrial use. Several tenants occupy the site including a wholesale food and food product supply warehouse and offices. The surrounding parcels are currently used for a combination of commercial, light industrial, utility right-of-ways and recreational purposes. The nearest residential area is less than 0.5 miles to the north, however, the park is zoned as residential. Past Use of the Site: In 1904 the site was used for the manufacturing of tar paper. The site was owned by Barrett Manufacturing Company (a predecessor company to Honeywell International, Inc.). Tar tanks, storage tanks, stills, a pitch shed and an oil house were located on-site. In the 1940s Doran Manganese Bronze Company, Inc. Foundry & Machine Shop occupied the site. In the 1940s to 1950s, Argus Chemical Laboratory (Argus) purchased and operated on the site (subsequently purchased by Witco in the early 1960s). Under Argus and Witco ownership, the plant produced metallic-organic soaps and salts, barium stearates, phosphites and epoxy plasticizers. During the 1950s and 1960s, aluminum paste was produced in a process on the roof of one of the buildings. This production ceased in the late 1950s to early 1960s and all plant operations were moved to a parcel of land located to the southwest of the 688 Site. The laboratory and offices remained at the 633 Site until approximately 1990 when these functions were moved to 688 Court Street. Site Geology and Hydrogeology: The site is reclaimed water front along the East River in a heavily industrialize area. Fill material was observed across the site from 0 to 12 ft bgs. The fill material consisted primarily of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.). Underlying the fill materials, a silt-clay layer was encountered and in turn underlain continuously by Lake Flushing. A clayey layer, a layer of low permeability, has lateral continuity across the site. This layer (former base of the Gowanus Canal) is gray in color and has a minimum average thickness of approximately 8.0 ft. Due to its' lateral continuity beneath the site, the silt-clay layer acts as a low permeability barrier between the overlying fill and the underlying water-bearing zone located within the glacial deposits beneath the site. Based on the manmade coastline (rip-rap, pile sheeting), well gauging data and the generalized hydrogeological cross-sections; varying depths of the silt-clay layer (former base of the Gowanus Canal) have created variable groundwater flow directions with a net flow toward the Gowanus Canal. To the south and west of the site, the coastline is lined with sheet piling. To the east of the site the coastline is lined with riprap. The water table underlying the site occurs within the fill and native material. Depth to water beneath the site has ranged from 2.0 ft to 9.0-ft below ground surface (bgs) over the course of the investigation. Based on the tidal study, water level

measurements (high, low and intermediate tide) the site does not appear to be tidally-influenced.

Env Problem: Nature and Extent of Contamination: Based on investigations conducted to date, the primary contaminants of concern at the site include toluene, ethylbenzene, xylene, semi-volatile organic compounds (SVOCs)/polycyclic aromatic hydrocarbons (PAHs), phenol, and metals. Soil: The VOCs toluene, ethylbenzene and xylene are found in soil from the surface to the water table. Benzene is found at 13 parts per million (ppm) at the center of the site and at 15 ppm at southern boundary of the site. This contamination is above the groundwater protection soil cleanup objective (SCO) of 0.06 parts per million (ppm) for benzene. PAHs are found throughout site soil. Benzo(a)pyrene is found in concentrations up to 62 ppm which is above the protection of groundwater SCO of 22 ppm. Metals are found throughout site soil. Lead was as high as 618 ppm, barium was found up to 590 ppm, cadmium was found up to 340 ppm, arsenic was found as high as 14.6 ppm and mercury was found as high as 2.4 ppm. Groundwater: Toluene, ethylbenzene, xylene, naphthalene and benzene are found in groundwater at concentrations up to 240, 300, 530, 3,000 and 48 parts per billion (ppb), respectively which are all above the groundwater standards of 5, 5, 5, 10 and 1 ppb, respectively. SVOCs pyrene and naphthalene are found in groundwater at concentrations up to 200 and 6,400 ppb, respectively, which are above the groundwater guidance values of 50 and 10 ppb, respectively. Soil Vapor: Two rounds of sub-slab soil vapor sampling were performed. Based on the results DOH indicated that no further sampling or mitigation would be required.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates soil vapor intrusion is not a concern for existing on-site buildings. An evaluation of the potential for soil vapor intrusion is recommended for any future on-site buildings. Surrounding properties are in various cleanup programs and the potential for soil vapor intrusion at those sites will be evaluated separately.

**Actual:**  
**1 ft.**

Site Description:

See site C224163 Location: The 45,400 square foot site is located at 627-641 Smith Street in the Borough of Brooklyn, Kings County, NY in an urban area. Site Features: The Site currently consists of a vacant 1-story warehouse and an asphalt-paved parking lot. The site warehouse is connected to the warehouse on the lot to the south. Current Zoning/Use(s): The site is currently zoned as M3-1 (manufacturing). Historical Use(s): The Site was occupied by Barrett Manufacturing Company, Storage and Shipping in the early 1900s. Later, Colonial Sand and Stone Company occupied the site in the 1950s. Black Diamond Cargo Line and Pittston Stevedoring Storage occupied the Site from the early 1960's to the 1990s. The original occupant, Barrett Manufacturing, utilized nine coal tar storage tanks and two gasoline underground storage tanks (USTs) as part of their production of coal tar and roofing material. Additionally, Barrett Manufacturing operations occupied the entire city block west of the site (Block 492). Block 492 currently consists of three Lots: Lot 1, Lot 15, Lot 20. Block 492, Lot 1 is a State Superfund Site: Chemtura 633 Court Street ID No. 224146. Site Geology and Hydrogeology: Soil borings conducted between 2005 and 2012 indicate there are alternating layers of sand and dense clay. Two to four separate aquifers are present at the site, separated by clay confining layers. Groundwater is present at a depth of 2 ? 4 feet below grade.

Env Problem:

See site C224163 Nature and Extent of Contamination: Soil ? Coal tar related VOCs and SVOCs are present above Unrestricted Use SCOs. These include naphthalene (7,700 mg/kg), benzo(a)anthracene (280 mg/kg), benzo(a)pyrene (250 mg/kg), and benzo(b)fluoranthene (190 mg/kg). Contaminated soil is present on-site in the vicinity of the former tar storage tanks, and extends to the eastern property boundary, which is bordered by the Gowanus Canal. Additionally, the area of contaminated soil extends off-site to the south, and upgradient to the west. High soil VOCs and SVOCs upgradient and adjacent to Block 492 indicate that Block 492 may be a source of coal tar related VOCs and SVOCs. Groundwater ? VOCs and SVOCs are present above Class GA Standard in twenty monitoring wells. The groundwater plume has not been delineated to the south or to the west. VOC and SVOC contamination extends to the eastern property boundary, which is bordered by the Gowanus Canal. Napthalene is present at a concentration of up to 17,000 ug/l. Benzene is present at a maximum concentration of 11,000 ug/l. Toluene is present at a concentration of up to 7,300 ug/l. Soil Vapor ? Soil vapor samples have not been collected. Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental significant threat.

Site Description:

Location: The Red Hook Smith Street site is located in Brooklyn, in an urban area. The site is bounded by Smith Street to the west, the Gowanus Canal to the east and south, and an industrial property to the north. Site Features: The site encompasses two tax parcels (Block 493, Lot 1 and Block 495, Lot 1) and occupies approximately 85,400 square feet. Block 493 (the northern part of the site) is occupied by a vacant one-story warehouse and an asphalt-paved parking lot. The

Env Problem:

Health Problem:

warehouse is connected to the warehouse on the lot to the south (Block 495, Lot 1). Block 495 is occupied by an approximate 40,000-square-foot vacant one-story warehouse. Current Zoning/Use(s): The site is zoned heavy manufacturing; M-3. M-3 zoning also allow certain retail and commercial uses. Currently the site is vacant. Past Uses of the Site: Barrett Manufacturing occupied Block 493 from circa 1900 to 1940 and utilized nine coal tar storage tanks as part of their production of coal tar and roofing material. After Barrett Manufacturing sold the property in the 1950's two gasoline underground storage tanks (USTs) were installed on the property. Barrett's manufacturing facility also extended to the west of the site (hydraulically up-gradient). Various manufacturing and storage companies occupied Block 495 (the southern part of the site). American Ice Company occupied Block 495 in the early 1900 s and Smith Street Dock Corporation and Seaboard Storage occupied lock 495 from around 1930 to 1950. Black Diamond Cargo Line and Pittston Stevedoring Cargo Storage occupied Block 495 from the late 1960 s to the 1990 s. Site Geology and Hydrogeology: The topography is relatively flat, gently sloping to the east-southeast towards the Gowanus Canal. The site is underlain by a discontinuous layer of historic urban fill that extends to approximately 12 feet below grade surface (bgs). The historic fill generally consisted of sand, silt, clay, gravel, cobbles, wood and brick fragments, cinder, and ash. The historic fill is underlain by fine sands and silts from 2 to 47 feet bgs. Discontinuous stiff clays lens and organic material were identified at varying depths (8 to 35 feet bgs). Bedrock was not encountered as part of this investigation, however, the Hartland Formation would be anticipated based on local investigations. The depth to groundwater is approximately five-feet below the ground surface and flows to the east-southeast towards the Gowanus Canal. Several environmental investigations and reports have been generated for this site; most recently the Department received a Draft Supplemental Investigation Report in February 2016. Observation described in the report detail the presence of tar-like material in the soil and floating on the groundwater in portions of the site and immediately upgradient of the site. Groundwater is approximately five-feet below the ground surface (bgs). The tar-like material was encountered from near the ground surface to a maximum depth of 47 feet bgs. Sorbed and aqueous phase VOCs and SVOCs are present onsite and upgradient of the site at concentrations above the applicable SCGs. The VOCs identified as contaminants of concern include BTEX compounds with soil concentrations up to 361mg/kg and dissolved phase concentrations up to 1,210 ug/l. The most prevalent SVOC was naphthalene with the maximum soil concentration of 7,500 ug/kg and groundwater concentration of 17,000 ug/l.

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with a building and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern because the site is

Site Description: Location: The site is located in the Red Hook section of Brooklyn, in the City of New York. The site consists of two parcels listed as Block 492, Lots 15 (628 Smith Street) and Block 492, Lot 20 (182 Sigourney Street) on NYC tax maps. The site is at the intersections of Halleck Street, Smith Street and Sigourney Streets. The site is approximately 200-300 feet west of the Gowanus Canal. Site Features: The site is primarily covered with a multi-story brick building with courtyard parking accessible from Sigourney Street. Current Zoning and Land Use: The current site use is not known but appears to be occupied with commercial and/or industrial operations. Historical

S117667764

Use: The property was used for tar paper manufacturing. A 1904 Sanborn Insurance Map depicts coal tar products, asphalt tanks and various oil tanks (including a 14,000-gallon underground tank). The Sanborn Map indicates that this property was operated by Barrett Manufacturing Company. Site Geology and Hydrogeology: Based on geological information at an adjacent site, the groundwater at this property is anticipated to be approximately 5 feet bgs. Groundwater flow is anticipated to flow toward the Gowanus Canal traveling east and/or southeast. The groundwater is likely saline due to its proximity to the canal. Much of this area is reclaimed water front property with fill material anticipated to exist from 0 to 12 feet bgs. A gray colored, low permeability clayey layer (former base of the Gowanus Canal) is also anticipated beneath the fill material with a thickness varying up to eight feet.

Env Problem: Investigations at adjacent properties indicate tar-like source material, light non-aqueous phase liquid (LNAPL) and petroleum VOCs are present in the soil and at the soil/groundwater interface. Downgradient and to the east of this potential site is the Red Hook Smith Street Brownfield Cleanup Program (volunteer) site (C224163) where tar-like material, metals, VOCs and SVOCs were identified. West of this potential site is the 633 Court St. (Chemtura #224146) site and the Red Hook Smith Recreation Area; tar-like material has been identified in each of these locations. A portion of the Red Hook Smith Street BCP and the 633 Court Street (Chemtura) property were both previously part of the former Barrett Manufacturing property. To the south is a State Superfund P-site (224196) where tar boils have been identified on site, which was initially Mica Roofing Company. Investigation of this site is warranted.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: Location: The Empire Electric Company site is located at 5200 1st Avenue in Brooklyn, New York on the southwest corner of 52nd Street and 1st Avenue. Site Features: The site contains a deteriorated, vacant, red brick building that covers the entire site. The site consists of a 100 ft 240 ft parcel (Section 1, Block 803, Lot 9). Directly adjacent to northwest of the Site is a 100 ft 140 ft parcel (Block 803, Lot 6) that contains a contiguous structure scheduled to remain. This building shares a common wall and adjoining steel truss roofing structure with the Empire Electric building. Current Zoning/Use(s): The Empire Electric building is vacant and inactive. The area is primarily industrial in nature, with a potato chip manufacturing plant (Utz), a New York City Department of Sanitation vehicle maintenance and storage building, an overnight courier (DHL), the former BUG - Kings County Works manufactured gas plant site, and the waterfront (Bush Terminal docks) in the general vicinity. Historical Use(s): The building was constructed in 1892 by the Brooklyn City Railroad Company for use as a power plant for the municipally owned trolley system. The building was used for electrical generation until the 1930s when the trolley system was abandoned. The facility was conveyed to the city of New York in 1940. In 1951, the property was sold and subdivided the parcel into two lots (Lot 9 and Lot 6). On 5 September 1951, Lot 9 was sold. Empire Electric operated on Lot 9, the eastern two-thirds of the building, from 1951 to December 1986 when the property was once again sold. During at least some of this time period, activities within the building included rehabilitation of electrical transformers. Site Geology and Hydrogeology: The Site, situated approximately 1,200 feet from the Upper New York Bay at the western end of the borough of Brooklyn, in New York City, is topographically relatively flat. The elevation of the Site is approximately 16 feet above mean sea level (msl), sloping gradually up from the Hudson River. Site soil directly beneath the building consists primarily of fill and debris materials, underlain by sand and gravel, and beneath these layers, bedrock. The water table beneath the Site occurs at a depth of approximately 17 to 21 feet below ground surface (bgs). Regional groundwater flow direction is to the west, toward the Upper New York Bay. The depth to bedrock is unknown, but is likely greater than 100 feet bgs. Surface drainage generally follows the topography, and flow is northwest along 52nd Street toward the Upper New York Bay. Storm water drains are present along 52nd Street and First Avenue. Surface run-off collects in these drains and then flows directly into the Upper New York Bay.

Env Problem: Based upon investigations conducted to date, the primary contaminant of concern are PCBs. Building material contained PCB concentrations in excess of 50 ppm, the TSCA definition of PCB hazardous waste, in 35 percent of the analyzed samples. Based on sample analysis, 60 percent of the concrete slab on the main floor and 80 percent of the concrete slab in the basement area exceed this criteria and are therefore classified as a TSCA hazardous waste. Grease/oil samples collected from building material in the basement also exceeded the TSCA criteria of 50 ppm total PCBs and is present on nearly 70 percent of brick pillar surfaces. Fifty-two of the 165 building material samples collected and analyzed contained levels of PCB

contamination ranging from 51 ppm to 33,000 ppm. Soil samples from beneath the basement floor exceeded the 1ppm surface/10ppm subsurface criteria historically used to assess PCB contamination in soil. Two of these soil samples also exceeded the TSCA definition of hazardous waste. The site presents a significant environmental threat due to the potential for PCB releases from source areas both within and beneath the building.

Health Problem: The floors, walls and the soil beneath the basement floor of the dilapidated on-site building are contaminated with significant levels of PCBs. Building entrances have been sealed with concrete block to prevent homeless people from living in the building and being exposed to PCBs. Testing results for upgradient and downgradient groundwater samples collected during the PSA indicate the presence of volatile organic compounds above standards for public drinking water supplies. However, exposure to the contaminated groundwater is unlikely since public water serves the area. Indoor air contamination from volatile organic compounds in the groundwater is a potential exposure pathway that will be evaluated during the upcoming investigation.

                  Updated By:      GWHEITZM  
                  Site Description:      Location - The Kings County Manufactured Gas Plant (MGP) site is comprised of two contiguous parcels of land located on the east bank of the Bay Ridge Channel of the Upper New York Bay in Brooklyn, Kings County. The parcels are identified as 5400 1st Avenue and 5600 1st Avenue. The site is on the west side of 1st Avenue, near 54th Street. Site Features - The site is currently used for commercial/industrial purposes with warehouse buildings, a fuel oil storage facility and a power-generating station. The area between the buildings and other infrastructure is paved. Current Zoning/Use - The site is currently active and is zoned for industrial use. The surrounding parcels are currently used for a combination of both commercial and industrial uses. Past Use of the Site - The former MGP operated from 1904 until 1951. By 1970 all former MGP structures had been removed except for four fuel oil tanks and one gas holder that was converted into a fuel oil tank. In 1976 three meat distribution buildings were added to the property, which still exist today. At this time the fuel oil tanks and a power generating station were being operated by Con Edison. There are numerous spills relating to this activity on the site. One of the results of these spills was the installation of recovery wells for the collection of light non-aqueous phase liquid (LNAPL). These

wells are currently being sampled on an annual basis. Site Geology and Hydrogeology - Fill material was encountered up to approximately 18 feet below ground surface. Fill material consists of fine to coarse sand with some silt, brick, metal fragments, concrete, cobbles and some clay. Underlying the fill was glacial outwash, fine to coarse gravel. Bedrock in the area is expected to be approximately 225 feet below ground surface. Groundwater is found at depths of 8 to 25 feet below ground surface and is tidally influenced. The groundwater flow direction is to the west.

Env Problem: Prior to Remediation- Based on previous investigations, there are both VOCs (BTEX) and SVOCs (PAHs) from numerous petroleum spills at the property, as well as from past MGP operations. These contaminants are present in both soil and groundwater. Additional site characterization field work is planned for the Spring/Summer of 2017.

Health Problem: The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Site Description:

Location: The Metropolitan Gas Works site is located at the intersection of 12th Street and Second Avenue in South Brooklyn. It is bounded on the west by the Gowanus Canal, on the north by 10th St., on the east by 2nd Avenue and on the south by 13th St. Features: The site is completely developed. The original plant footprint is occupied by a large home improvement center, a strip mall and parking lots that serve them. The surrounding neighborhood is primarily industrial and commercial, with some residential properties within a few blocks. Past use of the site: The site was occupied by a large manufactured gas plant (MGP) from the late 1800s to the late 1930s. The MGP converted coal and petroleum products to gas, which was used for heating, cooking, and lighting purposes in the surrounding areas. The process produced large amounts of coal tar wastes which have heavily contaminated the soils beneath the site. The southeastern portion of the plant was remediated in 2001 to 2003. The remediation consisted of the excavation of 3 gas holders and the installation of a DNAPL recovery system that is currently operating. The western third of the site (where the actual gas plant was located) is now occupied by a multi-story brick commercial building including a Pathmark grocery store. A Remedial Investigation was conducted in this area between 2009 and 2013. Site Geology and Hydrogeology: Soils on the site consist of fill that overlies a peat/silt/clay "meadow mat" marsh deposit that lies approximately 16 feet below ground surface (bgs). Beneath the meadow mat are sand and silt glacial outwash deposit. Bedrock is greater than 150 ft.bgs. Groundwater flow is southwest, toward the Gowanus Canal.

Env Problem:

Contaminants of concern The principal waste disposed on the site was MGP tar, which is a dark, oily liquid that is slightly denser than water. Large amounts of this tar escaped from the foundation of the gas holders, and appear to have migrated off site to the south and west of the site. The tar contains high levels of BTEX and PAH compounds. Both groups of compounds have been found in site soils and groundwater. Impacted media Soils and groundwater at the site are

heavily impacted by BTEX and PAH compounds. The impacted soils are found at depths of 8-16 feet and greater beneath the Lowe s portion of the property; contaminated soils above this elevation were removed and replaced with clean backfill during the remedial action in 2002. No information is available on the Pathmark portion of the site. However, gross contamination was found within a few feet of the Pathmark foundation and it is likely that significant amounts of soil and groundwater contamination are present in this area also. Known SCG exceedances Soil and groundwater contain BTEX and PAH compounds at levels far in excess of SCGs. These exceedances represent a significant threat to the environment. Special Resources impacted No special resources identified. The adjacent portion of the Gowanus Canal is heavily contaminated from a variety of sources including other MGP sites nearby, but specific impacts from this particular MGP site have not been identified. The off site tar migration appears to be taking place at depths below the bottom of the canal.

Health Problem: Further investigation is needed to assess the nature and extent of site-related contamination and the potential for exposure to site contaminants. The site currently has several buildings and a paved parking lot, therefore, contact with subsurface contamination is unlikely. Exposure to site-related contaminants in groundwater is not expected because the area is served by public water. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion on the site.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017	Source: EPA
Date Data Arrived at EDR: 06/09/2017	Telephone: N/A
Date Made Active in Reports: 09/15/2017	Last EDR Contact: 11/03/2017
Number of Days to Update: 98	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Quarterly

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal Delisted NPL site list***

### Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/30/2017	Source: EPA
Date Data Arrived at EDR: 06/09/2017	Telephone: N/A
Date Made Active in Reports: 09/15/2017	Last EDR Contact: 11/03/2017
Number of Days to Update: 98	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Quarterly

## ***Federal CERCLIS list***

### FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 10/06/2017
Number of Days to Update: 92	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Varies

### SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/11/2017	Source: EPA
Date Data Arrived at EDR: 07/21/2017	Telephone: 800-424-9346
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 11/03/2017
Number of Days to Update: 77	Next Scheduled EDR Contact: 01/29/2018
	Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

### SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/11/2017	Source: EPA
Date Data Arrived at EDR: 07/28/2017	Telephone: 800-424-9346
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 11/03/2017
Number of Days to Update: 70	Next Scheduled EDR Contact: 01/29/2018
	Data Release Frequency: Quarterly

## ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 09/13/2017	Source: EPA
Date Data Arrived at EDR: 09/26/2017	Telephone: 800-424-9346
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 09/26/2017
Number of Days to Update: 10	Next Scheduled EDR Contact: 01/08/2018
	Data Release Frequency: Quarterly

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (212) 637-3660
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 09/26/2017
Number of Days to Update: 10	Next Scheduled EDR Contact: 01/08/2018
	Data Release Frequency: Quarterly

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (212) 637-3660
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 09/26/2017
Number of Days to Update: 10	Next Scheduled EDR Contact: 01/08/2018
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (212) 637-3660
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 09/26/2017
Number of Days to Update: 10	Next Scheduled EDR Contact: 01/08/2018
	Data Release Frequency: Quarterly

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (212) 637-3660
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 09/26/2017
Number of Days to Update: 10	Next Scheduled EDR Contact: 01/08/2018
	Data Release Frequency: Quarterly

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/22/2017	Source: Department of the Navy
Date Data Arrived at EDR: 06/13/2017	Telephone: 843-820-7326
Date Made Active in Reports: 09/15/2017	Last EDR Contact: 11/08/2017
Number of Days to Update: 94	Next Scheduled EDR Contact: 02/26/2018
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 08/10/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/30/2017	Telephone: 703-603-0695
Date Made Active in Reports: 10/13/2017	Last EDR Contact: 11/27/2017
Number of Days to Update: 44	Next Scheduled EDR Contact: 03/12/2018
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 08/10/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/30/2017	Telephone: 703-603-0695
Date Made Active in Reports: 10/13/2017	Last EDR Contact: 11/27/2017
Number of Days to Update: 44	Next Scheduled EDR Contact: 03/12/2018
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

### **ERNS: Emergency Response Notification System**

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/18/2017	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 09/21/2017	Telephone: 202-267-2180
Date Made Active in Reports: 10/13/2017	Last EDR Contact: 09/21/2017
Number of Days to Update: 22	Next Scheduled EDR Contact: 01/08/2018
	Data Release Frequency: Quarterly

## ***State- and tribal - equivalent CERCLIS***

### **SHWS: Inactive Hazardous Waste Disposal Sites in New York State**

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 08/15/2017	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 08/17/2017	Telephone: 518-402-9622
Date Made Active in Reports: 10/24/2017	Last EDR Contact: 08/17/2017
Number of Days to Update: 68	Next Scheduled EDR Contact: 11/27/2017
	Data Release Frequency: Annually

### **VAPOR REOPENED: Vapor Intrusion Legacy Site List**

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 05/01/2017	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/18/2017	Telephone: 518-402-9814
Date Made Active in Reports: 09/22/2017	Last EDR Contact: 11/17/2017
Number of Days to Update: 127	Next Scheduled EDR Contact: 02/26/2018
	Data Release Frequency: Varies

## ***State and tribal landfill and/or solid waste disposal site lists***

### **SWF/LF: Facility Register**

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 09/25/2017	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 09/26/2017	Telephone: 518-457-2051
Date Made Active in Reports: 11/13/2017	Last EDR Contact: 09/21/2017
Number of Days to Update: 48	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Quarterly

## ***State and tribal leaking storage tank lists***

### **INDIAN LUST R5: Leaking Underground Storage Tanks on Indian Land**

Leaking underground storage tanks located on Indian Land in Michigan, Minnesota and Wisconsin.

Date of Government Version: 04/26/2017	Source: EPA, Region 5
Date Data Arrived at EDR: 07/27/2017	Telephone: 312-886-7439

## **State and tribal institutional control / engineering control registries**

### RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Date of Government Version: 11/18/2010	Source: NYC Department of City Planning
Date Data Arrived at EDR: 06/30/2014	Telephone: 212-720-3401

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

## ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

## HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

## **Other Ascertainable Records**

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 02/01/2017	Source: Environmental Protection Agency

	Data Release Frequency: Varies

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

## HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

	Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

## HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/28/2017

Source: PennWell Corporation

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

## Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

## Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

## Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

## GEOCHECK<sup>®</sup> - PHYSICAL SETTING SOURCE ADDENDUM

### TARGET PROPERTY ADDRESS

SOUTH BROOKLYN MARINE TERMINAL  
269 37TH STREET  
BROOKLYN, NY 11232

### TARGET PROPERTY COORDINATES

Latitude (North):	40.65977 - 40° 39' 35.17"
Longitude (West):	74.010583 - 74° 0' 38.10"
Universal Transverse Mercator:	Zone 18
UTM X (Meters):	583640.8
UTM Y (Meters):	4501248.5
Elevation:	1 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map:	6048959 JERSEY CITY, NJ
Version Date:	2014
Northeast Map:	5940597 BROOKLYN, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
3604970192F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
3604970211F	FEMA FIRM Flood data
3604970073B	FEMA Q3 Flood data
3604970194F	FEMA FIRM Flood data
3604970085B	FEMA Q3 Flood data

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
JERSEY CITY	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### **ROCK STRATIGRAPHIC UNIT**

Era: Mesozoic  
System: Cretaceous  
Series: Upper Cretaceous  
Code: uK (decoded above as Era, System & Series)

### **GEOLOGIC AGE IDENTIFICATION**

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

No detail available.

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### New York Public Water Wells

Source: New York Department of Health

Telephone: 518-458-6731

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Database

Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

### RADON

#### State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

**Certified Sanborn Results:**

Sanborn® Library search results

Certification #: B869-444C-BDE9

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

**Limited Permission To Make Copies**

AECOM (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

**Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. # Certified Sanborn® Map Report

12/01/17

**Site Name:**

South Brooklyn Marine Termin:  
269 37th Street  
Brooklyn, NY 11232  
EDR Inquiry # 5121817.3

**Client Name:**

AECOM  
125 Broad St  
New York, NY 10004-0000  
Contact: Nelson J. Abrams

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

# Certified Sanborn® Map Report

12/01/17

**Site Name:**

South Brooklyn Marine Terminal  
269 37th Street  
Brooklyn, NY 11232  
EDR Inquiry # 5121817.3

**Client Name:**

AECOM  
125 Broad St  
New York, NY 10004-0000  
Contact: Nelson J. Abrams

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

**Certified Sanborn Results:**

**Certification #** B869-444C-BDE9  
**PO #** 60558675  
**Project** South Brooklyn Marine Terminal

**Maps Provided:**

2006	1993	1979	
2005	1992	1978	
2004	1991	1965	
2003	1988	1951	
2002	1987	1928	
2001	1985	1926	
1995	1982	1922	

Sanborn® Library search results

Certification #: B869-444C-BDE9

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

**Limited Permission To Make Copies**

AECOM (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

**Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. # Certified Sanborn® Map Report

12/01/17

**Site Name:**

South Brooklyn Marine Terminal  
269 37th Street  
Brooklyn, NY 11232  
EDR Inquiry # 5121817.3

**Client Name:**

AECOM  
125 Broad St  
New York, NY 10004-0000  
Contact: Nelson J. Abrams

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

**Certified Sanborn Results:**

**Certification #** B869-444C-BDE9  
**PO #** 60558675  
**Project** South Brooklyn Marine Terminal

**Maps Provided:**

2007	1994	1980	1922

Contact: Nelson J. Abrams

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

### Certified Sanborn Results:

# Certified Sanborn® Map Report

12/01/17

**Site Name:**

South Brooklyn Marine Terminal  
269 37th Street  
Brooklyn, NY 11232  
EDR Inquiry # 5121817.3

**Client Name:**

AECOM  
125 Broad St  
New York, NY 10004-0000  
Contact: Nelson J. Abrams

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

### Certified Sanborn Results:

**Certification #** B869-444C-BDE9

# Certified Sanborn® Map Report

12/01/17

**Site Name:**

South Brooklyn Marine Terminal  
269 37th Street  
Brooklyn, NY 11232  
EDR Inquiry # 5121817.3

**Client Name:**

AECOM  
125 Broad St  
New York, NY 10004-0000  
Contact: Nelson J. Abrams

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

**Certified Sanborn Results:**

**Certification #** B869-444C-BDE9  
**PO #** 60558675  
**Project** South Brooklyn Marine Terminal

**Maps Provided:**

Contact: Nelson J. Abrams

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

**Certified Sanborn Results:**

# Certified Sanborn® Map Report

12/01/17

**Site Name:**

South Brooklyn Marine Terminal  
269 37th Street  
Brooklyn, NY 11232  
EDR Inquiry # 5121817.3

**Client Name:**

AECOM  
125 Broad St  
New York, NY 10004-0000  
Contact: Nelson J. Abrams

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

**Certified Sanborn Results:**

**Certification #** B869-444C-BDE9  
**PO #** 60558675  
**Project** South Brooklyn Marine Terminal

**Maps Provided:**

Sanborn® Library search results

Certification #: B869-444C-BDE9

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

**Limited Permission To Make Copies**

AECOM (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

New York, NY 10004-0000  
Contact: Nelson J. Abrams

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

# Certified Sanborn® Map Report

12/01/17

**Site Name:**

South Brooklyn Marine Terminal  
269 37th Street  
Brooklyn, NY 11232  
EDR Inquiry # 5121817.3

**Client Name:**

AECOM  
125 Broad St  
New York, NY 10004-0000  
Contact: Nelson J. Abrams

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

**Certified Sanborn Results:**

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2005. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

## FINDINGS

### ADJOINING PROPERTY DETAIL

The following Adjoining Property addresses were researched for this report. Detailed findings are provided for each address.

No Addresses Found

## FINDINGS

### TARGET PROPERTY: ADDRESS NOT IDENTIFIED IN RESEARCH SOURCE

The following Target Property addresses were researched for this report, and the addresses were not identified in the research source.

#### Address Researched

269 37th Street

#### Address Not Identified in Research Source

2005, 2000, 1997, 1992, 1985, 1980, 1976, 1973, 1970, 1965, 1960, 1949, 1945, 1940, 1934, 1928

## **Appendix C Qualifications of Environmental Professional**

## Nelson J. Abrams Senior Project Manager

### Education

MS, Geology, Rutgers University,  
1986

BS, Geology, University of New  
York, Oswego, 1982

### Registrations

Professional Geologist

Professional Geologist, North  
Carolina

Professional Geologist,  
Pennsylvania (pending renewal)

### Years of Experience

With AECOM 23  
With other firms 9

### Professional Affiliations

American Institute of Professional  
Geologists

Geological Society of America

Mr. Abrams has 32 years of management and hands-on experience with environmental assessments, compliance investigations, remedial investigations, underground storage tank removals and closures, site remediation and interfacing with local, state and federal regulatory agencies. His background includes work at former manufactured gas plants, nuclear and fossil fuel power generating stations, pharmaceutical operations, bulk petroleum and gasoline storage facilities, oil refineries, military installations and waterfront properties.

**Environmental Assessment and Investigation, City of New York Department of Design & Construction (DDC), New York, New York.** Managed environmental assessment and investigation activities over a nine year period for the DDC. The work included a wide variety of investigation activities focused on soil and groundwater contamination, asbestos and lead surveys and air monitoring activities. Tasks include maintaining a constant line of communications with the various representatives at the DDC and following the detailed administrative procedures to meet the scope of services required by the DDC and the City of New York.

**Phase I and II Investigations, New York City Economic Development Corporation (EDC), New York, New York.** Managed Phase I and Phase II investigations over a four year period for the EDC. The Phase I and Phase II activities were designed to identify potential environmental concerns on Brownfield properties being redeveloped for the City of New York. The activities included a wide variety of investigation activities for soil and groundwater contamination concerns, asbestos and lead surveys, and air monitoring activities. Tasks include maintaining a constant line of communications with the EDC's Vice President of Environmental Planning and following the detailed administrative procedures to meet the scope of services required by the EDC and the City of New York.

**Phase I Environmental Site Assessment (ESA), Mariner's Marsh Park, Staten Island, New York.** Managed a Phase I ESA and submittal of a SAMP, HASP, and QAPP to the U.S.EPA for site investigation activities proposed at the Mariner's Marsh Park located in Staten Island. A U.S.EPA Brownfield grant was awarded to the City of New York to conduct a preliminary investigation of the 107-acre park that was used as a former manufacturing and ship building facility at the turn of the twentieth century. Historic activities at the site included the operation of a small

New York, NY  
Environment  
July 2017

MGP. Since the operations at the site had been non-existent for over 90 years, wildlife and vegetation had reclaimed the area.

The scope of the proposed investigation was to identify potential areas of environmental concern, especially in the area of the former MGP where coal tar deposits were encountered in the surface soils, in order to facilitate remediation for the site to become a wildlife preserve within the City.

**Phase II Site Investigation, Proposed Bushwick Inlet Park, Brooklyn, New York.** Managed the Phase II site investigation for the City of New York Department of Parks and Recreation (DPR) and the City of New York Department of Design and Construction (DDC) to identify environmental concerns at the proposed 28-acre Bushwick Creek Inlet Park located along the East River in the Williamsburg section of Brooklyn. The \$1.2 million investigation on four individual parcels consisted of the review of historical information regarding operations at each of the parcels, development of the sampling, quality assurance, and safety plans, initial characterization of the area's hydrogeology and environmental setting, development of four site investigation reports, and the development of four cost to cure reports presenting estimated remedial costs at each of the sites.

The areas investigated included an active bulk petroleum storage facility (Bayside Oil), a former petroleum refinery, and the former Williamsburg Gas Works. Activities conducted during the investigation activities included the collection of subsurface soil samples, installation of monitoring wells for the collection of groundwater samples, and the collection of sediment samples from the Bushwick Creek Inlet and the East River. The evaluation of contamination associated with the former MGP was complicated by the historic discharge of diesel fuel and fuel oil from operations subsequent to the MGP. In addition, investigation activities were limited by the presence of two warehouses that comprise almost two full city blocks. The results of the investigation in and around the former MGP indicated the presence of coal tar and free product in the areas of the former gas holders as well as impacts to the sediment within the East River.

The information provided to the City of New York will allow them to allocate funding for additional investigation activities and for the implementation of remedial measures.

**Environmental Assessment, Schering-Plough Corporation, Worldwide.**

Managed environmental assessments associated with the purchase of a veterinary pharmaceutical manufacturer by Schering-Plough Corporation. The project involved environmental audits and Phase II site investigations of 53 facilities in 21 countries throughout North America, South America, Europe, Southeast Asia and the Southern Pacific. Managed review of historical and current site operations, evaluation of previous environmental reports and regulatory compliance notices, interviews with local regulatory agencies, site reconnaissance and all Phase II site investigations, and coordinated activities with environmental and engineering firms located in each country. Identified areas of both regulatory noncompliance within each country and areas where the client's internal environmental practices were not being followed.

**Pre-sale Environmental Screening for Water Bottling Facilities, Anjou International, Nationwide.** Managed the pre-sale environmental screening associated with the divestiture of 56 Hinckley & Schmitt water bottling facilities. Represented Anjou International, the seller, in reviewing environmental action items raised by the purchaser's consultant. Coordinated the management of data and compliance activities from facilities located throughout the United States. Provided technical guidance to the program director regarding information obtained to address identified action items. Completed over 97% of the 230 action items within 90 days to allow for the completion of the property transaction.

**Phase I / Phase II Environmental Site Assessment / Construction Oversight – Proposed New York Proton Center, East Harlem, New York.** Managed a Phase I / Phase II Environmental Site Assessments (ESA) at two locations in East Harlem, New York on behalf of ProHEALTH Proton Management LLC. The ESA services were requested as part of the construction of a proton therapy cancer treatment center, which will be the first proton center in New York City. An initial ESA consisting of both a Phase I and Phase II assessment was performed at a partially vacated automobile dealership which was initially identified as the property where the proton center would be sited. However, it was decided to locate the proton center on a nearby property consisting of a parking lot and vacated auto body repair shop currently owned by the City of New York. A Phase I ESA was performed to identify potential areas of environmental concern as the property had numerous historical uses since the late nineteenth century, including a vacant auto body repair shop. A Phase I ESA Report was prepared which identified several recognized environmental concerns (RECs) associated with former historical uses at the property. Based upon the findings of the Phase I ESA, AECOM was requested to conduct a Phase II ESA to evaluate the RECs identified. The Phase II ESA consisted of the collection of surface soils samples, subsurface soils samples, and groundwater samples from temporary monitoring wells installed at the site. The investigation included the collection of soil and groundwater samples from below the concrete floor of the vacant auto body repair shop.

Due to the presence of some elevated levels of semivolatile organic compounds (SVOCs) and inorganic compounds above the commercial SCOs, the New York City Department of Environmental Protection (NYCDEP) has requested the preparation of a Remedial Action Plan (RAP) to be utilized during the construction of the proton center to address the limited contamination present in the historic fill. AECOM developing the RAP on behalf of the client and is currently providing oversight monitoring during the construction activities.

AECOM also conducted a survey of the former auto body repair shop to evaluate the presence of asbestos containing materials (ACM), lead-based paint (LBP), and other universal wastes that may be present within the building. The results of the survey indicated the presence of ACM with roofing materials within the building along with the presence of waste oil within an aboveground storage tank. AECOM monitored the removal of the ACM and waste oil prior to the demolition of the building.

**Phase I and II Investigation, Consolidated Edison, Former Columbus Place Substation, Yonkers, New York.** Managed the Phase I and Phase II investigations at a vacant parcel in Yonkers which was the former location of the Columbus Place Electrical Substation. The ESA was performed to identify potential areas of environmental concern that were not evaluated when the substation was demolished in the early 1990s. A Phase I ESA was prepared which identified several recognized environmental concerns (RECs) associated with former substation including two underground storage tanks (USTs) and the presence of several transformers. Based upon the findings of the Phase I ESA, AECOM was requested to conduct a Phase II ESA to evaluate the RECs identified. The results of the soil and groundwater samples, no further assessment was deemed necessary to define environmental conditions within the groundwater at the site. The results of the surface and subsurface soil samples revealed slightly elevated levels of SVOCs and several inorganic compounds above the SCOs. A supplemental investigation was performed to assist in the delineation of these compounds. The results of the initial and supplemental investigation activities were summarized in a draft Phase II Results Report. Subsequent to Con Edison's initial evaluation of the draft report, AECOM prepared a preliminary cost estimate for the removal of the impacted soil.

**Phase I Environmental Assessments of Power Generating Stations, RG&E, Fillmore and Rochester, New York.** Managed environmental assessments on behalf of RG&E at three generating facilities. The facilities consisted of a gas-fired generating station in Fillmore, N.Y. and two peaking stations in Rochester, N.Y. The assessments were conducted to identify potential environmental risks as part of RG&E possible divestiture of these sites. The assessments were conducted in general accordance with ASTM 1527-05 guidelines

**Environmental Assessment of Decommissioned Coal Fired Power Station, Rochester Gas & Electric Corporation (RG&E), Greece, New York.** Managed the environmental investigation and compliance review activities on behalf of Rochester Gas and Electric Corporation (RG&E) associated with the decommissioning and demolition of Russell Station, a 257 megawatt coal fired generating station in Greece, New York. The facility was constructed in 1948, and was listed as the nation's the 12th worst polluter of sulfur dioxide and New York State's 7th worst mercury polluter. In addition, several fuel oil spills in the 1980s along with the on-site storage of coal ash had impacted the site and an adjacent water body. Due to cost constraints to retrofit this facility, RG&E's parent company, Energy East, concluded that the station should be closed with the option of constructing a new natural gas fired generating station.

The services provided to RG&E included a detailed evaluation of historical operations, and an investigation of soil and groundwater within areas of potential environmental concern. The investigation was conducted in accordance with New York State Department of Environmental Conservation (NYSDEC) requirements. Additional assessment services included conducting asbestos, lead-based paint, and PCB surveys. The data collected from the assessment activities was used to develop demolition costs for the current on-site structures, develop alternative remediation scenarios, identify long term monitoring options, and costs associated with remediating and/or monitoring the environmental impacts to the surrounding area.

New York, NY  
Environment  
July 2017

**Regulatory Compliance Investigation, NRG Energy, Connecticut.** Managed regulatory compliance investigation on behalf of NRG Energy, Inc. at four fossil fuel generating stations. Activities were conducted in accordance with the Connecticut Transfer Act regulations. Activities include conducting a risk assessment of known coal ash disposal areas, evaluation of potential impacts on adjacent surface water bodies, development of a groundwater reclassification application for one of the facilities and evaluation of potential soil and groundwater impacts.

**Environmental Assessment of Nuclear Power Station, Northeast Energy Company (NNECO), Waterford, Connecticut.** Assistant Project Manager of an environmental assessment of the Millstone Point Nuclear Power Station in Waterford, Connecticut on behalf of Northeast Nuclear Energy Company (NNECO). Activities consisted of conducting a Phase I and Phase II environmental assessment as part of the divestiture of the station. The Phase I activities included review of historical and current site operations, evaluation of previous environmental reports and regulatory compliance notices, interviews with key facility personnel, interviews with local and state regulatory agencies, review of available files at NNECO headquarters and at the Connecticut Department of Environmental Protection (CTDEP), and a comprehensive site reconnaissance. Phase II investigation activities were performed on an expedited basis and consisted of the collection and analysis of soil, groundwater, and sediment samples in areas of potential concerns identified during the Phase I assessment. The final Phase I and Phase II reports were provided to potential buyers of the station as part of NNECO's divestiture activities.

**Phase I Environmental Site Assessment (ESA), Former Building 112 Property, Griffiss Air Force Base, Rome, NY.** Conduct a Phase I ESA on behalf of the New York Power Authority at a parcel located at the air base for the possible siting of an offsite Emergency Control Center. The ESA identified potential recognized environmental concerns which could impact the future development of the property.
