Executive Summary

Sustainable South Brooklyn Marine Terminal, L.P. contracted with AECOM USA, Inc. (AECOM) to perform a Phase I Environmental Site Assessment Update (Phase I ESA Update) of the portion of the property identified as South Brooklyn Marine Terminal (SBMT) located along Second Avenue between 31st and 39th Streets in Brooklyn, Kings County, New York (subject property). This Phase I ESA Update was performed in general conformance with the scope and limitations of ASTM International, Designation: E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13). Exceptions to, or deletions from, this practice are described in this report. An original Phase I ESA was completed by AECOM for a portion of the subject property in May 2018.

The site visit occurred on February 7, 2022. The subject property is approximately 65 acres in size and is mostly covered in asphalt and concrete pavement and remnants of demolished buildings that were used as part of the previous operations. Multiple railroad tracks (both in use and not in use) are located on the subject property. There is a security guard stationed at all times at the entrance located on 39th Street. A total of six buildings are located on the subject property, including: J1 Shed, J2 Shed, N2 Shed (referred to as the N Shed in the 2018 Phase I ESA), Graffiti Building, Tower Building and Scale House, and a One-Story Building located in the southeast portion of the subject property (previously identified as a 'Temporary Structure'). A Consolidated Edison (ConEd) Substation located along 2nd Avenue is not included as part of the subject property. There are also various mobile or temporary spaces throughout the subject property including large shipping containers used for storage (33rd Street Pier, near the Graffiti Building, and inside J1 Shed), several temporary electrical substation structures (near N2 Shed and near the Graffiti Building), and a vacant office trailer (near N2 Shed).

No visual evidence of underground storage tanks (USTs) (e.g., vent pipes, fill ports), potable water wells, clarifiers, dry wells, septic tanks, or leach fields was observed during the site visit. One monitoring well cover was observed near the entrance to the Graffiti Building. Four aboveground storage tanks (ASTs) ranging in capacity from approximately 100 to 500 gallons were observed on the subject property. These ASTs include: one approximately 500-gallon AST reportedly contain diesel to power temporary generators at the Graffiti Building, one approximately 100-gallon AST was located in the abandoned Diesel Fire Pump Room and is assumed to have contained diesel, and two approximately 250-gallon fuel oil tanks powered heating vents in the One-Story Building. No staining was observed around these ASTs. One abandoned transformer labeled as PCB-containing was observed inside the N2 Shed with staining from oil or moisture on the concrete floor underneath it.

The subject property is located in an industrial and commercial area in the Industry City area of Brooklyn. The subject property is bordered to the northwest by the Gowanus Bay. The subject property is bordered to the northeast by Gowanus Bay and a New York City Department of Transportation laydown and material sorting area. Beyond Gowanus Bay to the northeast is the Sims Municipal Recycling Facility. The subject property is bordered to the southeast by automotive parking spaces for the Industry City employees and customers, a bike lane, and Second Avenue, beyond which are the retail and commercial properties as associated with Industry City. The subject property is bordered to the south by the intersection of Second Avenue and 39th Avenue, beyond which are automotive parking spaces along 39th Avenue and additional commercial and retail properties also associated with Industry City. The subject property is bordered to the southwest by commercial and retail facilities and Gowanus Bay. AECOM did not observe any gasoline service stations or dry cleaners in the immediate vicinity (500 feet) of the subject property. Based on AECOM's site reconnaissance of the surrounding neighborhood, no off-site sources of concern were identified.

AECOM's historical research indicates that the subject property was primarily open water in 1888. Only the southern-most portion of the subject property along 39th Street and Second Avenue was developed with a pier and labeled as the New York & Brooklyn Ferry & Steam Transportation Company. Since that time, the subject property has been gradually filled in and therefore is largely man-made. By 1922, the subject property had been developed into a series of piers identified as the City of New York Piers.

Multiple buildings were present between these piers and Second Avenue. By 1940, four 160,000-gallon bulk storage tanks operated by the New York City Transit System were present on the western portion of the property where the current N2 Shed is located, with a diesel fuel filling station located southeast of these tanks. Buildings located at the subject property at this time were primarily used for storage and transport operations. By 1953, the four bulk storage diesel fuel ASTs had been replaced by the current N2 Shed. In 1961, aerial photographs show extensive construction on the 39th Street Pier as it is extended further out into New York Harbor into its current configuration. By 1965, the J1 and J2 Sheds were present, but are connected with a structure parallel to the Gowanus Bay on the pier, giving the entire building a "J" configuration (hereinafter identified as the J Shed). Rail spurs from the New York City Transit System Freight Department were still present, but the trolley service identified in previous maps was no longer present. In addition, a lift truck garage was present on the northeastern portion of the property which remains and is currently identified as the Tower Building. By 1978, significant changes had occurred to the subject property. The Tower Building remained, the J Shed and N2 Shed were present; however, most of the earlier buildings were no longer present and had been replaced by asphalt pavement for the storage of cargo containers and motor vehicles. The current Graffiti Building located in the central portion of the property near the N2 Shed was present (labeled as a maintenance shop constructed in 1973). The only other remaining building was a manufacturing building located near Second Avenue to the east of the Tower Building. In addition, the Scale House (attached to the southwest side of the Tower Building), which still remains present at the subject property, was located at the subject property by 1974. The portions of 33rd Street and 35th Street located on the subject property were replaced with urban fill to create a large asphalt paved pier with two operating cranes to remove cargo containers from docked ships. The 35th Street Pier remains at the subject property as a pier shed. By 1995, the 33rd Street Pier was reportedly in a state of disrepair and it was removed by 2006. Between 2009 and 2011 a section of the J Shed that parallels the edge of Pier 39 had been removed; thus creating two separate buildings currently known as the J1 and J2 Sheds. The subject property has remained in the same general configuration through the present-day. Based on the lengthy historical use of the property for commercial and industrial uses and the known soil and groundwater impacts above standards, the historical use of the subject property is considered a recognized environmental condition (REC), in AECOM's opinion. No historical off-site sources of concern were identified during this assessment.

The subject property is identified on the NY Spills, Resource Conservation and Recovery Act (RCRA) Non-Generators (NonGen)/No Longer Regulated (NLR), MANIFEST, Facility Index System (FINDS), Enforcement and Compliance History Online (ECHO), and UST databases reviewed for this assessment. The RCRA, Manifest, FINDS and ECHO listings are compliance-related listings associated with the former generation of hazardous wastes. No violations were noted associated with these listings. Five spills were reported for the subject property, all of which have been closed. One facility (South Brooklyn Marine Terminal) was identified at the 'foot of 39th St. and 1st Avenue' and was listed on the UST database in association with the removal of five 4,000-gallon diesel steel/carbon steel USTs, two 550-gallon gasoline steel/carbon steel USTs, and one 550-gallon used oil steel/carbon steel UST. The USTs were removed in 1998.

According to the environmental database report, numerous (over 300) sites were identified within their respective ASTM and/or EDR search distances from the subject property. Based on AECOM's review of the remaining database listings, none of these sites are expected to present a REC to the subject property based on their distance from the subject property, regulatory status (i.e. closed, no violations found), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient).

The following RECs were identified during this assessment:

- The subject property has a long historical use for commercial and industrial purposes, including the presence of urban fill and USTs. This historical use has driven numerous on-site subsurface investigations. The soil and groundwater data obtained from these subsurface investigations indicated semi-volatile organic compounds (SVOC) and metals are present in the soil and groundwater at the subject property at concentrations exceeding regulatory standards. These soil and groundwater impacts are considered a REC.

- An abandoned transformer labeled as PCB-containing with less than 50 parts-per-million (ppm) PCBs was observed in the southeastern portion of the N2 Shed. Staining on the floor underneath the transformer was observed; however, AECOM was unable to determine if this was oil or water. The labeled PCB transformer with staining visible on the floor underneath it is considered a REC.
- During the 2018 Phase I ESA, an abandoned transformer was observed in the Tower Building. Subsequent to the 2018 Phase I ESA, the soil around the transformer was sampled and elevated PCBs were detected. Information pertaining to the current status of this abandoned transformer or the impacted soil is unknown as AECOM did not have access to the interior of this building at the time of the current site visit. Based on the lack of additional information, this transformer and associated PCB-impacted soil is considered a REC, in AECOM's opinion.

Based on the above-described activities, no controlled RECs (CRECs) were identified in connection with the subject property.

The following historical RECs (HRECs) were identified during this assessment:

- Based on the information provided, Spill Nos 9714187, 9714188, 9714189, and 9714190 were assigned when impacted soils were identified during the removal of eight USTs, two ASTs, associated fuel pumps and piping, and four hydraulic lifts from the subject property on March 20, 1998. These Spill Numbers were closed at different times from January to July 2005. The USTs ranged in size from 550 gallons to 4,000 gallons and contained gasoline, diesel, and waste oil. Post-excavation soil sampling was conducted and revealed volatile organic compounds (VOC), SVOC, and lead regulatory exceedances. The Spill Numbers were closed in 2005 after soil and groundwater investigations were completed to the New York State Department of Environmental Conservation's (NYSDEC's) satisfaction. Based on the closed status, these releases are considered an HREC, in AECOM's opinion.
- An additional Spill Nos 8801529 was assigned on May 17, 1988 due to a release of mustard oil by UPS and was closed the next day. Based on the closed status, this Spill is considered an HREC, in AECOM's opinion.

In addition, vapor encroachment conditions (VECs), were identified during completion of a Tier 1 vapor encroachment screening (VES) following ASTM International, Designation: E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated October 2015 (ASTM E2600-15).

- The subject property has a long history of commercial and industrial use including the presence of USTs. Based on previous subsurface investigations including a January 2022 Phase II ESA that included soil, groundwater, and soil vapor sampling, SVOCs are present above standards in on-site soil and groundwater and elevated concentrations of VOCs were detected in the soil vapor samples. Based on this information, a VEC exists and is considered a REC, in AECOM's opinion.

The following de minimis conditions (DMCs) were identified during this assessment:

- Areas of de minimis staining were observed on concrete and asphalt surfaces (ranging in size from approximately one square-foot to 20 square-feet) throughout the subject property, both inside the buildings and in the open exterior areas. The majority of the sources of these minor stains could not be identified due to the age and multiple uses of the subject property but are likely related to motor fuels and hydraulic fluid. Based on the limited extent of the staining, these areas of staining are considered DMCs, in AECOM's opinion.

1. Introduction

1.1 Purpose

This Phase I Environmental Site Assessment Update (Phase I ESA Update) was performed pursuant to AECOM USA, Inc. (AECOM's) written proposal, dated January 21, 2022. This assessment was performed in advance of the potential leasing of the subject property. The purpose of this Phase I ESA update is to satisfy the hazardous materials assessment requirements of the New York State Environmental Quality Review (SEQR) process. An original Phase I ESA was completed by AECOM for a portion of the subject property in May 2018. Soil and groundwater sampling was subsequently conducted by AECOM in October 2018.

Per ASTM International, Designation: E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13), potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs), and de minimis conditions (DMCs). A REC is defined by the ASTM standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws. HRECs are a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. CRECs are a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. DMCs are those situations that do not present a material risk of harm to public health or the environment and generally would not be subject to enforcement action if brought to the attention of the regulating authority.

In addition, a Tier 1 vapor encroachment screening (VES) is completed as part of this assessment. This screening is conducted in general accordance with the ASTM International, Designation: E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated October 2015 (ASTM E2600-15). The objective of the VES is to evaluate if a vapor encroachment condition (VEC) exists or if a VEC does not exist.

This assessment for the Phase I ESA is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the subject property and adjacent properties.

1.2 Scope of Work

The 2018 Phase I ESA included a site visit, regulatory research, historical review, and a review and an environmental database analysis of the subject property. In conducting this 2022 Phase I ESA Update, AECOM assessed the subject property for visible signs of possible contamination, researched public records for the subject property and adjacent properties (as applicable), and conducted interviews with persons knowledgeable about the subject property.

This project was performed in general accordance with ASTM E1527-13 and AECOM's proposal, dated January 21, 2022. Conclusions reached in this report are based upon the assessment performed and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA Update to identify the presence of conditions materially affecting the subject facility and/or property within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the subject property. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the subject property.

As specified in ASTM E1527-13, it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- **Uncertainty Not Eliminated** - No Phase I ESA can wholly eliminate uncertainty regarding the potential for REC in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for REC in connection with a property, and this practice recognizes reasonable limits of time and costs. (Section 4.5.1 of ASTM E1527-13)
- **Not Exhaustive** - "All appropriate inquiry" does not mean an exhaustive assessment of a clean property. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a Phase I ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E1527-13)
- **Comparison with Subsequent Inquiry** – Phase I ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent Phase I ESAs should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of ASTM E1527-13)

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a

Phase I ESA when ASTM E1527-13 is employed. According to ASTM E2600-15, the following limitations apply:

- Uncertainty Not Eliminated in Screening - No VES can wholly eliminate uncertainty regarding the identifications of VECs in connection with the target property. (Section 4.5.1 of ASTM E2600-15)
- Not Exhaustive - The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E2600-15)
- Comparison with Subsequent Investigations - It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify any VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors. (Section 4.5.4 of ASTM E2600-15)

This report was prepared pursuant to an agreement between Sustainable South Brooklyn Marine Terminal, L.P. (Client) and AECOM and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM-generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.4 Site-Related Limiting Conditions

The following site-specific limitations were encountered during the course of this assessment:

- During the site visit, AECOM was not provided access to all interior spaces of the buildings on the subject property. The Tower Building interior was locked and no key was available. The interior of this building was previously viewed in 2018 and a soil boring conducted near an abandoned PCB-containing transformer. Though unable to confirm the placement of this transformer inside this building, this particular site-related limiting condition is not expected to have significant limitation to this assessment.
- Access was also not available for every utility room in the J1 Shed building because the doors were locked and no key was available. These rooms were viewed in 2018 and the building has since been vacated. This particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- The interior of the Graffiti Building was able to be assessed visually from the doorway but was not entered due to active welding and movement of heavy equipment at the time of the site

visit. This particular site-related limiting condition is not expected to have a significant limitation to this assessment.

- During the site visit, AECOM did not access the roofs of any of the site buildings. AECOM's evaluation of the subject property focused on areas where hazardous substances are handled. The site contact did not report any hazardous materials associated with the roofs. Based on this information, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.

1.5 Data Gaps/Data Failure

The following data failure/data gaps were encountered during the course of this assessment:

- As specified in the agreed upon scope of work, a title search and environmental lien search were not conducted as part of this Phase I ESA Update. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.
- A limitation was encountered in determining the historical use of the subject property. The earliest source of historical information reasonably ascertainable within the time frame of this report in which usage could be determined was a Sanborn Map dated 1888. At the time of the map, the subject property was primarily open water in 1888; however, the southern-most portion of the property along 39th Street and Second Avenue was developed with a pier and labeled as the New York & Brooklyn Ferry & Steam Transportation Company. Therefore, the ASTM E1527 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, based upon the identified land use, it is unlikely that there had been significant prior development; therefore, this data failure is not expected to impact the results of this assessment.
- It should be noted that not all standard historical sources, as defined per ASTM E1527-13, were reviewed as part of this assessment. Historical local street directories were not obtained within the timeframe of this assessment. Based on information provided from the remaining standard historical sources and from historical information provided within the previously prepared environmental reports, additional historical information obtained from local street directories would not likely have assisted in meeting the historical use requirement; therefore, this data gap is not expected to impact the results of this assessment.
- Per ASTM E1527-13, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM was unable to interview past owners and/or operators at the subject property. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.
- Per the agreed scope-of-work and ASTM E1527-13, information related to certain site-specific items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM provided the Client (the users) with the User Questionnaire from ASTM E1527-13; at this time the completed form has not been returned for inclusion in this report. However, this data gap is not expected

to represent a significant limitation to this investigation given the historical use of the subject property.

- AECOM submitted Freedom of Information Law (FOIL) request to the New York City Department of Environmental Protection (NYCDEP) to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response from the NYCDEP to AECOM's FOIL request has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from this agency will significantly alter the conclusions or recommendations of this report. However, if information is received from this FOIL request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

2. Site Description

2.1 Site Location and Parcel Description

The subject property, known as the South Brooklyn Marine Terminal, consists of an irregularly-shaped tract totaling approximately 65 acres of land located along the northwest side of Second Avenue between 31st and 39th Streets, in Brooklyn, Kings County, New York. The subject property is accessed from Second Avenue to the southeast and 39th Street to the southwest.

According to the New York City Department of Finance (NYCDOF), the subject property consists of portions of several parcels or portions of parcels of land, including:

- The majority of Block 662 Lot 1, excluding the following: northwest pier along 29th Street that is occupied by SIMS Recycling Facility, the mainland area from Second Avenue to the Gowanus Bay from 31st Street to 29th Street, a long rectangular area on the southeast side along 2nd Avenue used for car parking lots and material storage, and a small polygon that is not contiguous to the main Lot 1 area but is located to the south of the security booth/site entrance.
- The majority of Block 662 Lot 130, except for a small rectangular area on the southeast side along 2nd Avenue, occupied by parking lot.
- The majority of Block 662 Lot 136 except for a small rectangular area on the southeast side along 2nd Avenue, occupied by parking lot.
- The majority of Block 662 Lot 137 except for a small rectangular area on the southeast side along 2nd Avenue occupied by parking lot and a larger rectangle on the southwest side along 39th Avenue carved out of the southwest side for a car parking lot.
- The majority of Block 662 Lot 155 except for a polygon carved out of the southwest area for a bus turnaround and a car parking lot on 39th Street.

In addition, it should be noted that the ConEdison Substation located along Second Avenue to the west southwest of 37th Street is not included in the subject property (portions of Block 662, Lots 1 and 130).

The approximate location of the subject property is illustrated on Figure 1 – Site Location Map and the detailed outline of the subject property is visible in Figure 2 – Site Plan.

2.2 Site Ownership

The subject property ownership according to the NYCDOF is listed below. The subject property parcels are all in Block 662 and are summarized by lot:

- Lot 1: City of New York- Department of Small Business Services
- Lot 130: South Brooklyn Railway Company
- Lot 136: South Brooklyn Railway Company
- Lot 137: Finance Administrator of the City of New York
- Lot 155: City of New York- Department of Small Business Services

2.3 Site Visit

Ms. Megan Dascoli and Ms. Cary Friedman with AECOM's 125 Broad Street, New York, New York office visited the subject property on February 7, 2022. During the site visit, AECOM was accompanied through the subject property by Mr. Michael Stamatis of Sustainable South Brooklyn Marine Terminal (SSBMT) and Mr. Anthony Notargiacomo of New York City Economic Development Corporation (EDC). Messrs. Stamatis and Notargiacomo provided information on the past and present uses of the subject property including current operations and history, Mr. Stamatis has been associated with the subject property for approximately three years and Mr. Notargiacomo for eight years. Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.4.

The site visit methodology consisted of walking over accessible areas of the subject property, including the building interiors and exteriors, the perimeter, and the portions of the surrounding area. The following sections summarize the results of the site visit.

2.3.1 Site and Facility Description

The subject property is approximately 65 acres in size and is mostly covered in asphalt and concrete pavement and remnants of demolished buildings that were used as part of the previous operations. Multiple railroad tracks (both in use and not in use) are located on the subject property. A total of six buildings are located on the subject property, including: J1 Shed, J2 Shed, N2 Shed, Graffiti Building, Tower Building and Scale House, and a one-story structure located in the southeast portion of the subject property (previously identified as a 'Temporary Structure'). There are also various mobile or temporary spaces throughout the subject property including large shipping containers used for storage (33rd Street Pier, near the Graffiti Building, and inside J1 Shed), several temporary electrical substation structures (near N2 Shed and near the Graffiti Building), and a vacant office trailer (near N2 Shed).

A brief description of each building is as follows:

- J1 Shed – Located along the southwestern portion of the 39th Street Pier. This building was vacant at the time of the site visit. This building was formerly used for the storage and warehousing of products unloaded from ships docked at the terminal and more recently as a temporary COVID-19 hospital. The building has a steel structural system and is in a general state of disrepair. The northeast and southwest sides of the building are constructed with concrete base and exposed concrete block along the bottom, and corrugated metal and polycarbonates sheets on top. The southeast side of the building is constructed with concrete block and covered by cement. The building's former boiler/mechanical room and the pump/ meter room were locked and inaccessible at the time of the site visit. Water service was reportedly not currently provided to this building. Approximately one dozen metal storage containers were observed inside the south corner of the building. A majority of these containers were locked but are reportedly routinely checked by Hughes Electrical Company and contain security cameras, copper wire and conduit supplies.
- J2 Shed – Located on the northwest portion of the 39th Street Pier. This building was vacant at the time of the site visit. This building was formerly used for storage and warehousing and more recently as a temporary COVID-19 hospital. The building has a steel structural system and shows signs of moderate disrepair. The northwest side of the building appears to have been repaired with corrugated metal panel. The remaining three sides of building were constructed with concrete base and exposed concrete block along the bottom, and corrugated metal and polycarbonates sheets on

top. The eastern portion of the building has a defunct pump and meter room which was previously used to supply water to the building's sprinkler system in case of a fire.

- N2 Shed – This was previously referred to as the N Shed in the 2018 Phase I ESA. Located on the northeastern portion of the 39th Street Pier, to the southeast of the J2 Shed. This building was vacant at the time of the site visit. The building has a steel structural system and shows signs of moderate disrepair. The exterior shell of the building was constructed with a concrete base and exposed concrete block along the bottom, and corrugated metal and polycarbonates sheets on top. Two defunct pump and meter rooms were observed in the north and northeast portions of the building. A 100-gallon diesel aboveground storage tank (AST), used to power a backup generator, was present in the Diesel Fire Pump Room. No staining was observed in the vicinity of this AST. One abandoned transformer, labeled as PCB-containing with less than 50 parts-per-million (ppm) PCBs, was observed inside the building on the southeast side. Staining was observed under the equipment; however, AECOM was unable to confirm if the staining was oil or water. Two degraded 55-gallon drums on a wooden pallet were observed on the exterior south-side of the building labeled as containing anti-freeze. No evidence of staining, leaks, or releases was observed in the vicinity of these drums.
 - Graffiti Building – Located on the eastern portion of the 39th Street Pier, immediately adjacent to the southeastern portion of the N2 Shed. This building was occupied by Phoenix Marine & Underwater Contractor at the time of the site visit. The main area of the building appeared to be used for material storage and for maintenance activities. Heating and cooling systems were not observed. The building has a steel structural system and shows signs of moderate disrepair. The exterior shell of building is constructed with concrete base and exposed concrete masonry block along the bottom, and corrugated metal and polycarbonates sheets on top. A second floor mezzanine area that contained a small office and storage space is present in the building. Miscellaneous construction equipment and supplies associated Phoenix's operations were present including a small front end loader and compressed gas cylinders of unknown contents. The building also contains a residential electric hot water heater, and a fire sprinkler control system.

An equipment and materials storage area was present along the northeastern exterior perimeter of the Graffiti Building. Four large metal containers were located on the southeast side of the building and were used for material storage. Seventeen 330-gallon plastic containers of Sikadur 35, an epoxy sealing adhesive, were stored along the northern and eastern walls of the building. The containers held various volumes, but most were empty. According to labeling on the containers, "Part B" of this material was labeled as corrosive and "Part A" was not. A 500-gallon diesel fuel AST with secondary containment was located near the southeast corner and entrance of the Graffiti Building that was used to run two temporary generators that supplied power to the building's operations. No evidence of staining, leaks, or releases was observed in the vicinity of the hazardous material and petroleum storage.

One monitoring well cover was noted to the southwest of the main entrance, near the temporary generators.

- Tower Building - Located along the eastern portion of the 33rd Street Pier, in the northeastern portion of the subject property. The building was formerly used as a communications outpost and a scale house for trucks coming in and out of the terminal. The interior of the building was inaccessible during the site visit. According to the site contacts, Demand Electric was in the process of vacating the building. The tower and main portions of the building appeared to be steel frame construction with a brick façade on the main building and metal sheeting on the tower. According to the 2018 site visit description, the building had cast in-place concrete floors on first and second level and access to the roof indicated that it is of asphalt gravel construction. Currently, the area to

the southwest of the building had eight bays for truck scales embedded in-ground with concrete curbs. The armor on the scales appeared rusted and damaged. The bays were crowded with debris including plastic drums of various sized and unlabeled contents, pallets, wooden spools, boats on trailers, hoses, debris, and broken supplies and equipment. The exterior of the building appeared to be in disrepair.

- One-story Building (previously identified as a "Temporary Structure") – A one-story building surrounded by a chain-link fence was observed on the southeastern portion of the subject property. This structure was vacant at the time of the site visit. This structure is approximately 5,000 square feet and is a steel structural system with corrugated sheet metal for the walls and a rubberized roof. The building was reportedly used for the maintenance of tractor trailer trucks. The building was heated with two air plenums attached to the ceiling, with each unit fueled by a 250-gallon fuel oil AST located in a secondary containment structure along the exterior perimeter of the building, one on the south side and one on the west side. One empty, unlabeled drum was found on the north side of the building. Water service is still provided at this building; there was an active water leak in the southeast corner of the building at the time of AECOM's site visit.

The remaining areas of the subject property consists of predominately of asphalt pavement. Many areas of the pavement show subsidence indicating that the fill brought into the area to create the terminal has possibly shifted and/or compacted over time. The remnants of chain-link fencing exist throughout the property and was likely used to isolate other buildings that have since been razed. Many locations within the property show evidence of the former building footprints. Additionally, numerous abandoned rail spurs exist on the subject property. Signage posted on the subject property and on Second Avenue indicates that some of these spurs are still active.

During the site visit, no visual evidence of underground storage tanks (USTs) (e.g., vent pipes, fill ports), potable water wells, dry wells, clarifiers, septic tanks, or leach fields was identified on the subject property. No visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit. In addition, no visual evidence of significant corrosion was identified on the floors or walls of the subject property building or on the exterior of the subject property. The general layout of the subject property is illustrated on Figure 2 - Site Plan and Representative Site Photographs are provided in Appendix A.

2.3.2 Surrounding Properties

The subject property is located in an industrial and commercial area in the Industry City area of Brooklyn. The subject property is bordered to the northwest by the Gowanus Bay. The subject property is bordered to the northeast by Gowanus Bay and a New York City Department of Transportation laydown and material sorting area. Beyond Gowanus Bay to the northeast is the Sims Municipal Recycling Facility. The subject property is bordered to the southeast by automotive parking spaces for the Industry City employees and customers, a bike lane, and Second Avenue, beyond which are the retail and commercial properties as associated with Industry City. The subject property is bordered to the south by the intersection of Second Avenue and 39th Avenue, beyond which are automotive parking spaces along 39th Avenue and additional commercial and retail properties also associated with Industry City. The subject property is bordered to the southwest by commercial and retail facilities and Gowanus Bay.

AECOM did not observe any gasoline service stations or dry cleaners in the immediate vicinity (500 feet) of the subject property. With the exception of Gowanus Bay, no other sensitive receptors (i.e. day care centers, schools, hospitals) are located adjacent to the subject property. Based on

AECOM's site reconnaissance of the surrounding neighborhood, no off-site sources of concern were identified.

2.3.3 Petroleum Products and Hazardous Materials

Petroleum products or hazardous materials were not observed in the J1 or J2 Sheds. Two degraded 55-gallon drums of antifreeze, an approximately 100-gallon diesel fuel AST for the backup generator, and one abandoned PCB-containing transformer were observed in the N2 Shed. Several 5-gallon plastic buckets of "Synco R & O Oil 46" were located inside, near the entrance, and several partially filled 330-gallon containers of epoxy sealant labeled as corrosive were present along the north exterior wall of the Graffiti Building. Eleven plastic drums of 55-gallon and 30-gallon volume with unknown contents were observed in the Scale House area of the Tower Building. Products affiliated with the maintenance of motor vehicles and construction equipment (such as paints, lubricants, small containers of motor fuels) were present within both the Graffiti and Tower Buildings (Refer to Section 2.3.1). As described in Section 2.3.1, two 250-gallon fuel oil ASTs are used to fuel two air plenums in the One-Story Building on the southeastern portion of the property. Petroleum staining was not observed in this building. Other hazardous materials were not identified by AECOM during the site visit.

Evidence of past placement of hazardous materials, in the form of two large, red "Hazardous Materials, No Smoking" signs, was observed on the northwest side of the J1 and J2 sheds on the 39th Street Pier. These signs were branded as "DOCKNYC". The areas were vacant during the site visit and there was no evidence of any staining in the area.

It should be noted, seven 55-gallon drums were observed in the interior of the N2 Shed near the southwest roll-up door. The drums were labeled as Non-Hazardous Soil Cuttings and dated 12/6/21. It is presumed these were generated during recent Phase II soil sampling activities. Although not considered a hazardous waste, based on the exceedances identified, these drums will likely need to be disposed of as impacted materials.

2.3.4 Hazardous Waste

No hazardous waste, with the exception of universal waste such as spent fluorescent light tubes, is generated at the subject property. Based on the presumed limited quantities, universal waste generation is not expected to represent a REC.

The subject property was not listed as an active generator of hazardous waste in the site-specific database report. Information pertaining to former generator listings is further discussed in Section 5.3.1.

2.3.5 Polychlorinated Biphenyls

Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the age of the subject property (pre-1979), the potential exists for PCBs to be present on-site.

During the site visit, one abandoned PCB-containing transformer was observed inside the N2 Shed along the southeast wall near joints in the concrete floor. The transformer was labeled as PCB-containing and with a label certifying the PCB content of the liquid inside the unit as less than 50 ppm. Staining was noted on the concrete floor at the base of the transformer; however, AECOM

was unable to determine if the staining was from transformer oil or ambient moisture. In addition, an abandoned transformer was observed inside the Tower Building during the previous site visit in 2018; however, the presence of this equipment was unable to be verified at the time of this Phase I ESA Update as the Tower Building was inaccessible.

No pole-mounted transformers were observed on the subject property during the site visit. Two new electrical substation N2 Sheds were observed on the subject property: one to the east of the Graffiti Building and one to the south of the N2 Shed. Electrical panels were observed in the permanent building structures on the subject property, but no transformers were noted.

Possible hydraulic lifts were observed on the subject property associated with three loading docks observed at the J2 Building. The age of these buildings may indicate the presence of PCB fluids. No leaks or stains were observed from these lifts. No evidence of underground lifts in maintenance areas was observed at the subject property.

Fluorescent light ballasts contain capacitors that may be filled with PCB-containing dielectric fluid. Typically, newer light ballasts will contain labeling stating "No PCBs". Based upon the age of the buildings, it is possible that the light ballasts within any of the buildings at the subject property contain PCBs. An inspection of individual ballasts was not included within the scope of this assessment.

No other hydraulic equipment (trash compactors, lifts) was identified on the subject property.

The presence of the PCB-labeled transformer with potential oil staining is considered a REC, in AECOM's opinion.

2.3.6 Aboveground Storage Tanks

Four ASTs were identified at the subject property during the site visit.

- One approximately 500-gallon diesel AST was visible near the southeast corner of the Graffiti Building and appeared to power two portable generators.
- One approximately 100-gallon AST was observed in the Diesel Fire Pump Room in the northeast corner of the N2 Shed. This AST was situated over a concrete floor, was not labeled, and there was no gauge to determine the amount of product, if any, in the AST. Based on the name of the room that the AST was located in, it is assumed that this AST contains/contained diesel fuel.
- Two approximately 250-gallon (based on the size of the enclosure) ASTs were observed adjacent to the One-Story Building in the southeast area of the subject property. Each AST appeared to be enclosed in a metal sided structure so the condition of the tanks and the ground beneath them was not visible. It was assumed they contained fuel oil as they were powering forced air heaters inside the building.

No ASTs were listed in the site-specific environmental database report or observed in the historical aerial photographs reviewed by AECOM. No releases related to ASTs were reported in the site-specific environmental database.

2.3.7 Underground Storage Tanks

Visual evidence of USTs (e.g., vent pipes, fill ports) was not identified during the site visit. A brass cap was identified during the 2018 Phase I ESA in the area located to the west of the One-Story Building (formerly identified 'Temporary Structure'), in the southeast portion of the subject property. As a result, the previous Phase I ESA, identified the potential for a UST in this area as a REC. However, a subsequent geophysical survey was conducted and did not identify a UST in this area. In addition, soil and groundwater samples were collected from this area in 2018. These samples had SVOC exceedances that were in line with compounds and levels found throughout the investigation area that included the majority of the subject property, see Section 4.3 for additional information.

Previous reports, see Section 4.3, indicate that USTs have historically been located on the subject property though they have reportedly been removed. No active USTs listed in the site-specific environmental database report or in the NYSDEC bulk storage database.

2.3.8 Solid Waste

Two solid waste dumpsters were observed to the north of the Tower Building. The dumpsters appeared to contain wire, plastic, and broken items. One solid waste dumpster was observed to the southwest of the Graffiti Building entrance and appeared empty. One solid waste dumpster was observed to the north of J1 Shed and appeared to contain wooden pallets and packing material. No evidence of inappropriate disposal activities and no significant staining were identified in the vicinity of the dumpsters.

2.3.9 Water

The subject property has no active water lines to obtain potable water, with the exception of water to the two structures located on the eastern portion of the property which are supplied by NYCDEP. No potable water wells were observed at the subject property. It is unclear if fire suppression water is supplied by the NYCDEP or obtained directly from Gowanus Bay. Potable water at the subject property associated with operations in the Graffiti Building consists of supplied bottled water.

2.3.10 Wastewater

Sanitary wastewater does not appear to be generated at the subject property as the only functional toilets observed were portable and temporary. They appeared to be serviced on a regular basis.

2.3.11 Stormwater

Stormwater from the subject property appears to drain via sheet flow to the numerous stormwater drains located throughout the paved portions of the subject property. It is unknown whether the subject property is connected to the municipal stormwater sewer system or whether the storm drains discharge to the nearby waterway of Gowanus Bay. No staining was identified in the vicinity of the storm drains.

2.3.12 Heating and Cooling

Fuel oil is the heat source for the One-Story Building near the southeast corner of the subject property. The source for the office areas was unable to be confirmed during this assessment. None of the other buildings at the subject property are heated and none of the buildings have air conditioning.

3. Environmental Setting

3.1 Topography

The United States Geological Survey (USGS) 7.5-minute topographic maps of the subject property area (Jersey City, NJ and Brooklyn, NY quadrangle maps) indicate that the subject property elevation is approximately 1 to 2 feet above mean sea level (USGS, 1995). Based on a review of these technical resources and AECOM's site visit, the subject property is generally flat with a slight downward slope towards the northwest.

3.2 Soil/Geology

According to a Phase II ESA conducted by AECOM in 2018, subsurface materials consisted of a mix of silt, sand, and gravel with evidence of concrete, brick, glass, and ceramic fragments typical of urban fill. Soils in New York City are typically classified as "Urban Land", a generic description of soils that have been buried, re-worked, or otherwise altered as a result of human activities.

The subject property area lies within the glaciated Coastal Plain physiographic province of New York. The bedrock geology in the area is not well documented, and the depth to bedrock is unknown; however, The Geology and Engineering Geology of the New York Metropolitan Area, Field Trip Guidebook T361 (Baskerville 1989) prepared for the 28th International Geological Congress, and the Geologic Map of New York City (compiled 2001) identify underlying bedrock as the Cambro-Ordovician age Hartland Formation. The Hartland Formation in the area of the subject property is part of the Pelham Bay Member and consists of gneiss. Surficial deposits in the region are mapped as glacial till (Cadwell et al 1986). Depending upon the specific location in the region the overburden material could also include fluvial, marine-tidal marsh, and recent fill deposits. Many low-lying areas have been historically filled to accommodate development.

3.3 Groundwater/Hydrology

Site-specific groundwater flow information was not identified during the course of this assessment. At the time of AECOM's Phase II ESA, groundwater was encountered in the soil borings at depths ranging from 7 to 9 feet below ground surface (bgs). Based on the proximity to the subject property to the Gowanus Bay and the topography of the subject property and surrounding area, groundwater is anticipated to flow in a westerly direction and will have some tidal influence. However, the actual groundwater flow direction in the vicinity of the subject property cannot be determined without site-specific ground water monitoring well data.

4. Site and Area History

Historical information for the subject property and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Aerial photographs dated 1924, 1940, 1943, 1951, 1954, 1961, 1966, 1971, 1974, 1981, 1985, 1994, 1995, 2006, 2009, 2013, and 2017;
- Google Earth aerial images dated 1994, 1995, and 2001 – 2021;
- Sanborn® Fire Insurance Maps (Sanborn Maps) dated 1888, 1906, 1921, 1922, 1926, 1928, 1951, 1965, 1978, 1979, 1980, 1982, 1985, 1987, 1988, 1991 – 1995, and 2001 – 2007;
- Topographic maps dated 1891, 1898, 1900, 1905, 1925, 1947, 1955/1956, 1967, 1979/1981, 2013/2014, 2016 and 2019;
- City directories for the years 1928, 1934, 1940, 1945, 1949, 1960, 1965, 1970, 1973, 1976, 1980, 1985, 1992, 1994, 1997, 1999, 2000, 2004, 2005, 2009, 2014, and 2017; and
- Online Property Information reviewed via the NYCDOF and the City of New York City Department of Buildings (NYCDOB) websites.

Note that Sanborn Map coverage of the entire subject property and/or adjacent properties was not available in all years reviewed.

In addition, an interview was conducted with Mr. Michael Stamatis who has been associated with the subject property for the past three years.

4.1 Subject Property

AECOM's historical research indicates that the subject property was primarily open water in 1888. Only the southern-most portion of the subject property along 39th Street and Second Avenue was developed with a pier and labeled as the New York & Brooklyn Ferry & Steam Transportation Company. A coal bin was present at the end of the pier. In addition to the ferry (now identified as the 39th Street Ferry), a covered platform extended out into the Gowanus Bay on urban fill in front of 38th Street by 1906. Smaller buildings identified as a boat maker, a storage building, and two boat houses are located on urban fill between 34th and 37th Streets.

By 1922, the subject property had been developed into a series of piers identified as the City of New York Piers. It is assumed that the piers were constructed on man-made filled areas. The 39th Street Ferry is identified as the City of New York Ferry with multiple buildings and several railroad sidings listed as the South Brooklyn Railroad. Two additional piers had been constructed into Gowanus Bay. These piers were City Pier – Moore & McCormack Company, Inc. (33rd Street), and Luckenbach Steamship Company Inc. Lessee (35th Street). Multiple buildings were present between these piers and Second Avenue. By 1926, the 39th Street Pier had been enlarged to include the ferry service, the City of New York Police Department Garage and Store House building, an unloading and storage area for timber, and a Fire Boat Station listed as New York Fire Department Engine Company 223. In 1928, the subject property was relatively unchanged with the exception that the Moore & McCormack pier is identified as the American Steamship Corporation and that the Luckenbach Steamship Company now has its own building at the entrance to the pier.

By 1940, four bulk storage tanks were present where the current N2 Shed is located. The 1951 Sanborn Map identifies these tanks as four 160,000-gallon aboveground diesel fuel bulk storage tanks operated by the New York City Transit System with a diesel fuel filling station located to the

southeast of these tanks. The Sanborn Map also indicates that much of the 39th Street Pier was under the operation of the New York City Transit System. The 39th Street Ferry was still in operation and the rail spurs entering the subject property were identified as the New York City Transit System Freight Department with a rail turnout identified as the Church Street Trolley Terminal. The City of New York Police Department Garage and Store House building was identified as the bus garage and repair shop for the New York City Transit System. Two gasoline tanks were identified in the northwest corner of the building. An additional bus garage was located adjacent to this building to the northwest. Located southeast of these buildings was a small structure listed as a tractor repair building for the Moore McCormack Lines. This building was identified as having a gasoline tank. At the edge of the pier, Engine Company 223 was depicted to contain an oil room. The 35th Street Pier was still operated by the Luckenbach Steamship Company. Buildings operating between the piers and Second Avenue consist of storage buildings for the Luckenbach Steamship Company and several storage buildings for the City of New York Department of Purchase between 32nd and 36th Streets. The Luckenbach building was identified as having a gasoline tank in the southeast corner of the building and along the northwest portion of the building and the Department of Purchase Building located between 35th and 36th Streets was identified as having two gasoline tanks outside of its northeastern wall.

The 1953 aerial photograph indicated that the four bulk diesel fuel storage tanks had been replaced by the current N2 Shed. In 1961, aerial photographs show extensive construction on the 39th Street Pier as it is extended further out into New York Harbor into its current configuration.

By 1965, Pier 39 had undergone some significant changes. The 39th Street Ferry was identified as the Department of Marine and Aviation 39th Street Terminal, with a portion of the area identified as the North East Marine Terminal used by the Mitsui Line. The J1 and J2 Sheds were present, but are connected with a structure parallel to the Gowanus Bay on the pier, giving the entire building a "J" configuration (hereinafter identified as the J Shed). Rail spurs from the New York City Transit System Freight Department were still present; however, the trolley service was no longer depicted. The New York City Transit System buildings present in 1951 were identified as storage buildings occupied by Universal Terminal & Stevedoring Company. Additional storage buildings operated by Universal Terminal & Stevedoring Company were located southeast of the former New York City Transit System buildings along Second Avenue between 36th and 37th Streets. The former operations of the Luckenbach Steamship Company were identified as being operated by the Farrell Lines, Inc. with the addition of a lift truck garage located immediately northeast of their storage buildings. This garage currently remains and is identified as the Tower Building. With the exception of an additional building identified as a transit shed located southwest of the Farrell Line operations, there were no other changes to the subject property since 1961.

The 1974 aerial photograph depicts significant changes to the subject property. Though the J Shed and N2 Shed were present, the majority of the buildings previously identified as being operated by the Universal Terminal & Stevedoring Company were no longer present and had been replaced by asphalt pavement for the storage of cargo containers and motor vehicles. The current Graffiti Building located near the N2 Shed was present in the photograph. The only remaining building was an unidentified structure near Second Avenue located east of the Tower Building. The majority of the storage buildings for the Farrell Lines have been demolished, with the exception of one structure currently known as the Tower Building. In addition, the Scale House, which still remains present at the subject property, was visible in the photograph. The 33rd Street and 35th Street were replaced with urban fill to create a large asphalt paved pier with two operating cranes to remove cargo containers from docked ships. The 35th Street Pier remains at the subject property as a pier shed. A portion of the building used by the City of New York Department of Purchase was demolished while the remaining portion is identified as being used for manufacturing.

As of 1979, the boundaries of the subject property were generally in its current configuration. The 1979 Sanborn Map indicates that the Graffiti Building located near the N2 Shed was built in 1973. The only remaining building along Second Avenue was the storage facility operated by Universal Terminal & Stevedoring Company located between 36th and 37th Streets. The Tower Building and the Scale House were illustrated in the map. By 1980, the building along Second Avenue identified as manufacturing was no longer present.

The subject property is also listed as being leased by the Northeast Marine Terminal Company, Inc. There were no substantial changes to the subject property until 1987 when the storage building occupied by the Universal Terminal & Stevedoring Company along Second Avenue was no longer present. The majority of the subject property was being used for the storage of cargo containers directly on the asphalt paved surface or for the parking of motor vehicles.

The subject property has remained relatively unchanged since 1987 with the exception of the following modifications:

- 1995 - The cargo cranes located where the 33rd Street Pier was formerly present were no longer depicted.
- 2006 – The 33rd Street Pier had been removed.
- Between 2009 and 2011 a section of the J Shed that parallels the edge of Pier 39 had been removed; thus creating two separate buildings currently known as the J1 and J2 Sheds. Multiple cargo containers and automotive vehicles are parked throughout the subject property.

Based on the lengthy historical use of the property for commercial and industrial uses and the known soil and groundwater impacts above standards, the historical use of the subject property is considered a REC, in AECOM's opinion.

4.2 Off-site Properties

NORTH

Properties to the north and northeast in 1888 consisted of New York Bay and several piers and storage buildings. By 1906, these piers were occupied by the Crescent Brick & Supply Company, Ross Iron Works, the Empire Repair Company, and the Raab Iron Works. By 1922, all of the properties to the north and northeast were under the operation of the James Shewan & Sons – Ship Yards and James Arnott. The 29th, 30th, and 31st Street Piers were present to the northwest and are operated by U.S. Steel Products Company, Norwegian – American Line, and Fabre Line, respectively.

The operations of the shipyard were better defined on the 1926 Sanborn Map and include a plate shop, pipe shop, electrical shops, machine shops, saw and planning mill, lumber storage, oil tank storage, and several operations associated with the shipyard building. The 30th Street Pier was identified as being operated by Lloyd Brasileiro and the 31st Street City Pier identified was operated by the Royal Netherlands Steamship Company.

The shipyard operations remain the same until sometime during or after World War II when the shipyard was identified on the 1951 Sanborn Maps as operated by the Bethlehem Steel Company.

It was noted on the Sanborn Map that the property information had not been corrected since 1941. The 1951 map also indicates that the property located immediately to the north of 29th Street contained several buildings owned by Sevedores for the use as storage, a warehouse, and a garage. A building located immediately to the northeast was identified as manila rope storage

owned by G. Johnson Inc. The 29th Street Pier was identified as being operated by the Isthmian Steamship Company, while the operators of the 30th and 31st Street Piers remain unchanged. Isthmian also operates a storage building located on 29th Street and Second Avenue. There appears to be no significant changes to these properties until 1974 when an aerial photograph shows that urban fill was being deposited between the 30th and 31st Street Piers to extend the operations of the piers further into New York Bay. This area became known as the 30th Street Pier. By 1978, the 29th Street Pier is operated by Argentine Lines and Constellation Lines and that the 30th Street had been completed. The storage building previously being operated by Isthmain was now listed as being operated by the New York City Department of Sanitation. The property to the north and northeast previously identified as operated by Bethlehem Steel was now identified as a gas turbine generating station operated by Con Edison. Two 1,000,000-gallon oil barges are docked within the confines of their operations.

As of 1979 the 29th Street Pier was no longer occupied. The properties to the north remained relatively unchanged until 2001 when the New York City Department of Sanitation was no longer identified as operating the building to the north. No changes were identified in any of the historical documents reviewed. However, in 2013 SIMS Municipal Recycling Facility was opened on the 30th Street Pier.

EAST / SOUTHEAST

The properties to the east of the subject property across Second Avenue in 1888 were mostly vacant. The South Brooklyn Rail Road Terminal Company, numerous rail spurs, and residential dwellings and storefront commercial properties were located to the southeast. The properties were mostly unchanged in 1906 with the exception of a small building along 33rd Street identified as Bush Terminal Company Freight Depot and several commercial operations in the southeast identified only as compound buildings and a repair shop with a saw and planing mill and a machine shop. By 1924, all of the vacant properties were developed with various storage buildings and loft space which are identified in the 1926 Sanborn Map as the Bush Terminal Company. Northeast of the subject property consisted of the location of the Bush Terminal Company Power House that contained a transformer room and two gasoline tanks in Building No. 9 near the corner of Second Avenue and 33rd Street. Multiple rail spurs identified as the New York Municipal Railway Corporation and a machine and print shops were located towards the southeast.

The properties towards the east remained relatively unchanged through 2007, excepting the powerhouse being identified as the Brooklyn Edison Company No. 32 building in 1951. The rail spurs to the southeast were identified in 1951 as the New York City Transit System B.M.T. Division, Bus Mechanical Department, and Freight Department. A filling station with a gasoline tank was also identified in this area and operated by the transit system. By 1965, there was no identification as to who operated the rail spurs and the filling station had become a pipe shop. Based on information obtained online regarding the history of Industry City, in 1996, a Costco retail store was constructed in the area of the rail spurs to the southeast. In addition, many of the lofts and storage buildings of the Bush Terminal Company (also known as Bush Terminal Associates) were in a state of disrepair. In 2013, a redevelopment project began in the area with the renovation of the lofts and storage buildings. Today this area is known as Industry City. It presently contains over 450 businesses ranging from NYC manufacturing companies to tech entrepreneurs, design and media companies.

SOUTH / SOUTHWEST

The properties to the south and southwest have been occupied by industrial and commercial operations since at least 1888. These operations included the Phoenix Chemical Works, H.W Johns Manufacturing Company, Pneumatic Pulv Company, and the Bush and Denslow Manufacturing Company. The structures and processes identified at these facilities included acid chambers, bulk bleaching storage tanks, and petroleum and distillation products such as naphtha, refined oil, and

tar. By 1906, all of these operations had ceased and were replaced by the H.W. Johns Manville Company (manufacturers of asbestos products) and storage buildings associated with the Bush Terminal Company. Additional operating entities included the F.S. Sanford Coal Company and coal yard, Dannemiller Coffee Company, Marcus Ward Company, Bush Docks, Brooklyn Rapid Transit, and rail yard. By 1926, most of the area was occupied by lofts and storage buildings owned by the Bush Terminal Company. Additional operations included the Dannemiller Coffee Company, Commonwealth Fuel Oil Company, S & S Storage and Warehouse Company, Bush Terminal Service Station – Freight Terminal, and warehouses for the Holcomb Rubber Company. Similar operations were identified in 1928.

As of 1951, the majority of the properties to the south and southwest were lofts and storage buildings operated by the Bush Terminal Company. Additional operating facilities identified included Dannemiller Coffee Company, East Coast Valve Company, and the Eskay Coal & Fuel Oil Company and other small general stores and commercial buildings. A filling station was located northwest of the Dannemiller Coffee Company. The area to the south and southwest was generally unchanged in 1965 with the exception of the Dannemiller Coffee Company which was labeled as a textile warehouse. No significant changes to these properties were identified since 1965 with the exception of the filling station near the former coffee company identified as an auto repair shop in 1993.

As with the properties east of the subject property, many of the lofts and storage buildings of the Bush Terminal Company were in a state of disrepair by the early 1990s. These buildings are also part of the Industry City redevelopment project and several of these structures have been renovated.

WEST / NORTHWEST

The subject property is bordered to the west and northwest by Gowanus Bay.

No historical off-site sources of concern were identified.

4.3 Previously Prepared Environmental Reports

Seven previous prepared environmental reports were provided for AECOM's review during the course of this assessment. Significant data gaps were not identified during AECOM's review of these previously prepared reports. Note that the previous reports cover areas that are within or include the subject property boundaries that are defined for this Phase I ESA.

Supplemental Site Investigation Report, South Brooklyn Marine Terminal, Brooklyn, New York, dated April 2004. Prepared by TRC Environmental Corporation for New York City Economic Development Corporation.

TRC investigated at the SBMT which covers portions of the subject property as well as additional areas to the northeast to 29th Street. The TRC Supplemental Site Investigation Report was based on a Supplemental Environmental Site Investigation Work Plan prepared by TRC in December 2002. The work consisted of a geophysical survey at suspected UST locations, test pits at geophysical anomalies, and soil borings at previously identified areas of concern and proposed construction locations. This report also reviewed many previous investigation reports that were attached in abridged form as Appendix A. Phase I and Phase II ESAs conducted by TRC in 2002 were referenced but not available for review.

The report included a historical review of the past uses of the property which was in general agreement with the AECOM Phase I ESA historical reviews in 2018 and 2022.

The discussion of reports from Ballard Engineering Consulting, PC 1997 and 1998 describe research and investigations revealing up to 40 USTs and ASTs on the subject property from 29th to 39th Streets. Figures showing locations are included in Appendix A. Eight USTs and two ASTs containing gasoline, diesel, waste oil, fuel oil and one AST of unknown contents ranging in size from 550-gallons to 4,000 gallons were removed in 1998 as well as four hydraulic lifts. Sidewall and bottom excavation samples indicate elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and lead.

Site-specific investigations were conducted by URS Corporation in 2000 through 2004 that included soil sampling, groundwater sampling, estimated extents and area of contamination, hydraulic conductivity results, and a recommendation of active remediation technology. As groundwater concentrations of VOCs fell, URS recommended continued monitoring instead of active remediation until two consecutive monitoring events achieved NYSDEC Groundwater Quality Criteria. The NYSDEC agreed to the approach in a letter dated October 21, 2003. No further information was available about this groundwater monitoring program.

The results of the investigation by TRC in 2004 were described. The soil samples were analyzed for VOCs, SVOCs, and Target Analyte List (TAL) metals. The test pits located in the areas of geophysical anomalies did not indicate presence of VOCs or any additional USTs or piping; no soil samples were collected for laboratory analysis. The 14 soil samples from the test pits showed elevated levels (above regulatory standards) of SVOCs and metals in most samples. VOCs and PCBs were detected in some of the samples at low levels. Four soil borings were sampled within the N2 Shed (in the area of four former 160,000-gallon ASTs) and soil samples exhibited petroleum-like impacts with elevated concentrations of SVOCs and metals detected.

Groundwater Sampling Report to Support the NYSDEC SPDES Permit for Construction Activity at the South Brooklyn Marine Terminal, Brooklyn, New York, dated August 14, 2007. Prepared by Henningson, Durham & Richardson (HDR Architecture and Engineering, P.C. for New York City Economic Development Corporation.

Groundwater sampling was performed at the SBMT to determine if groundwater removed during infrastructure improvements could be pumped from the excavation trenches to the municipal storm sewer for disposal. This report referenced an earlier geotechnical report produced by Blauvelt Engineers in 2002 that describes the site soils as manmade fill from 5 to 40 ft bgs. This report also included a table of Reported Spills and LTANKS Sites within ¼ mile and lists 11 sites, all with closed spill numbers.

Six temporary wells were installed throughout the current subject property footprint and a groundwater sample was collected from each. The laboratory results indicated elevated metals, pH, and Total Suspended Solids values. HDR concluded that the elevated results would be within acceptable ranges for discharge if the water was allowed to settle before discharge.

Final Soil Characterization Findings Report, 39th Street Pier, South Brooklyn Marine Terminal (SBMT, Brooklyn, NY, dated May 7, 2009. Prepared by The Louis Berger Group for New York City Economic Development Corporation.

Louis Berger performed soil sampling and waste characterization sampling in a limited area of the subject property. Eleven borings were advanced on the northeast corner of the bulkhead of the 39th Street Pier to the north of the N2 Shed and the Graffiti Building in preparation for excavation and the reconstruction of a rip-rap revetment and concrete barrier. Borings were drilled to approximately 20 feet bgs. Additionally, in this proposed excavation area along the edge the pier, six waste characterization samples and one discrete groundwater sample were collected.

The soil samples were compared to the NYSDEC Technical and Administrative Guidance Memorandum (TAGM) standards and exceedances for TAL metals and SVOCs were identified. The groundwater results indicated several TAL metals and SVOCs exceeded the NYSDEC groundwater standards.

These results were used to evaluate the soil for beneficial reuse and disposal. Based on the regulations and results, Louis Berger concluded that some soil could be reused on-site and could be disposed of as non-hazardous at an off-site disposal/recycling facility, if reuse was not feasible.

These results were from an area that was intended to be excavated. No further information was provided to indicate if this work was completed. The soil, if not removed, and the groundwater results would indicate a REC, in AECOM's opinion.

Phase I Environmental Site Assessment, South Brooklyn Marine Terminal, Second Avenue between 33rd and 39th Streets, Brooklyn, New York, dated May 2018. Prepared by AECOM for Red Hook Container Terminal, LLC.

AECOM prepared a Phase I ESA in 2018 of the subject property that is the basis for this 2022 update Phase I ESA. The footprint of the subject property in the 2018 Phase I ESA included the area from 33rd Street to 39th Street from Second Avenue to the water line. The layout and structures of the property, the environmental setting, the site and area history, and database and records review were similar to this 2022 Phase I ESA and are updated herein.

The following RECs were identified in the 2018 Phase I ESA:

- Due to the history of the subject property, the potential for orphan USTs and historical urban fill used to create the majority of the subject property including several of the current piers, the possibility exists for subsurface contamination on and in immediate vicinity of the subject property related to the potential USTs and historical urban fill.
- According to historical research conducted by AECOM, four 160,000-gallon aboveground bulk storage tanks were located in the area of the current N2 Shed between 1940 and 1953. Information concerning the decommissioning of these tanks and the removal of any impacted soil resulting from the operation of these tanks was not available. Therefore, the historical operation of these four tanks is considered an REC.
- A brass cap was observed imbedded within a concrete pad surface in the northwest area of the two temporary structures. Based upon AECOM's professional judgement, the presence of the brass cap and the concrete pad suggests the possible presence or former presence of an underground storage tank or other structure. Although there is no staining or other visible evidence of a release of any kind, the brass cap and possible underground tank is considered a REC for the subject property.
- An abandoned transformer labeled as containing PCB fluids was present along the northern portion of the Tower Building in an area that was gated and inaccessible. Staining was observed in the vicinity of this abandoned transformer (approximately 15 square-feet); however, AECOM was unable to determine if the staining was water or transformer oil. Until a detailed inspection and evaluation can be made, this staining is considered a REC at the subject property based on the labeling of the transformer as containing PCBs and the existence of the stain.
- Based on AECOM's professional judgement, observations made at the subject property and historical information suggest the possible presence of a VEC. The REC listed herein has the potential to include open vapor intrusion exposure pathways during future development or construction at the property. This potential VEC is considered a REC.

These findings formed the basis of Tetra Tech's 2021 Phase II investigations described below.

Asbestos and Lead Contained Materials Report, 269 37th Street, Brooklyn, New York, dated June 2018. Prepared by AECOM for Red Hook Container Terminal, LLC.

AECOM performed an asbestos and lead-paint survey in preparation of possible renovations at five buildings on the subject property: Tower Building, J1 Shed, J2 Shed, N-2 Shed (identified in this report as the N2 Shed), and Graffiti Building. These buildings were observed on-site during the 2022 AECOM site visit. These five buildings were sampled and numerous asbestos containing materials were present as well as lead detected in painted surfaces at various percentages. Additionally, light fixtures were indicated to possibly contain PCBs and the light bulbs could contain mercury in each of the five buildings; batteries were observed that could contain lead in the J-1 Shed; and a transformer observed on the east wall of the main area of the N-2 Shed that may contain PCBs.

The PCB-containing transformer in the N-2 Shed constitutes a REC at the subject property, in AECOM's opinion.

Phase II Limited Site Investigation Results Report, South Brooklyn Marine Terminal, 269 39th Street, Brooklyn, NY, Block No. 662, Lot 1, dated December 2018. Prepared by AECOM for Greenberg Traurig, LLP.

AECOM performed a Phase II Limited ESA on a portion of the subject property to address areas of concern identified in the 2018 AECOM Phase I ESA report, described above. Fifteen soil borings were advanced to a maximum depth of 20 feet bgs. At eight of those locations a groundwater sample was collected. Groundwater was encountered between 7 and 9 feet bgs. The borings were located:

- 5 borings in the N2 Shed on 39th Street Pier,
- 5 borings in and around the Temporary Structures (Auto Maintenance) near 37th Street and Second Avenue,
- 2 borings in and near the Tower Building south of the 33rd Street Pier,
- 1 boring near the railroad tracks near 2nd Avenue between 33rd/34th Street,
- 1 boring near the parking lot along 39th Street, and
- 1 boring along 39th Street near First Avenue.

The soil and groundwater samples were analyzed for VOCs, SVOCs, and PCBs. VOCs were not encountered in the soil or groundwater above NYSDEC Unrestricted Use Soil Cleanup Objectives (SCOs) or Ambient Water Quality Standards or Guidance Values (AWQSGVs). Eight of the 15 soil borings had elevated levels of SVOCs. The majority of the detections were recorded in the borings advanced in the N2 Shed in the location of the former aboveground petroleum storage tanks, along 39th Street and in the area of the Temporary Structure (Auto Maintenance). PCBs were detected above the Unrestricted Use SCOs in one surface soil sample near the abandoned transformer located in the Tower Building. One groundwater sample near a parking lot along 39th Street contained the only SVOC exceedances and there were no groundwater samples with any PCB detections.

Draft South Brooklyn Marine Terminal, Phase II ESA, Portions of Lots 1, 130, 136, 137, and 155, Block 662, 2nd Avenue, Brooklyn, New York 11232, dated January 6, 2022. Prepared by Tetra Tech, Inc., Parsippany, NJ for Empire Offshore Wind LLC.

Tetra Tech performed a Phase II ESA on the subject property to evaluate potential subsurface contamination identified from previous investigations. The report cited the Phase I and II reports produced by AECOM in 2018 as well as a subsurface investigation by TRC in July 2019 that was

not provided to AECOM for review as part of this Phase I ESA Update. The 2019 TRC investigation reportedly included advancing 20 soil borings, installing eight temporary wells, and the installation of eight soil vapor sample locations. A geophysical survey identified a- UST in the southwestern portion of the subject property near 39th Street; however, maps indicating the exact location were not provided. The results were summarized and described that select soil samples had detections: above the Unrestricted Use SCOs for VOCs; above the Unrestricted, Restricted Residential, Commercial, and Industrial Use SCOs for SVOCs and metals; one soil sample with a PCB detection above the Unrestricted Use SCO; and select pesticides over the Unrestricted Use SCOs. Additionally, the summary indicated that subsurface materials adjacent to the UST were not observed to be impacted.

In November to December 2021, Tetra Tech conducted a Phase II ESA that included advancing 40 soil borings to approximately 10 feet bgs; installing and collecting samples from 11 temporary monitoring wells; and collecting 13 sub-slab soil vapor samples and one ambient air sample from the subject property. Soil and groundwater samples were analyzed for VOCs, SVOCs, PCBs, pesticides, herbicides, TAL metals, total cyanide, 1,4-dioxane, and per- and polyfluoroalkyl (PFAS) substances. Soil vapor samples were analyzed for VOCs. The laboratory results indicated that there were VOCs, pesticides, herbicides, metals, or total cyanide detected in soil samples across the subject property and the additional mainland area to the northeast which was included in this investigation. Soil exceeded the Industrial Use SCOs for two SVOC compounds benzo(a)pyrene and dibenzo(a,h)anthracene, at seven of the soil boring locations. Additionally, groundwater results showed that the NYSDEC AWQSGVs were exceeded for SVOCs and metals. The soil vapor sample results indicated widespread elevated VOC detections.

Tetra Tech concluded that, based on the exceedances of the applicable regulatory standards for VOCs, SVOCs, and metals in the soils, groundwater, and soil vapor at the subject property, the site should be considered for entry into the New York Brownfield Cleanup Program.

The regulatory exceedances of VOCs, SVOCs, and metals across multiple media at the subject property present a REC to the subject property, in AECOM's opinion.

5. Database and Records Review

5.1 User Provided Information

Section 6 of ASTM E1527-13 states that certain tasks, which will help to determine the possibility of RECs associated with the subject property, are generally conducted by the Phase I ESA report user. This includes the following: reviewing title records for environmental liens or activity and land use limitations and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the subject property, or significant reduction in the purchase price of the subject property. Per the agreed scope-of-work, information related to these items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM has provided the Client (the users) with the User Questionnaire from ASTM E1527-13; however, at this time the completed form has not been returned for inclusion in this report. This data gap is not expected to represent a significant limitation to this investigation based on other documentation reviewed as part of the Phase I ESA.

5.2 Title Records/Environmental Liens

Per the agreed upon scope of work, a chain-of-title and an environmental lien search were not performed as part of this assessment.

5.3 Database Information

In accordance with the scope of work and ASTM E1527-13, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the subject property. The database abbreviations are provided in the site-specific environmental database report.

The database report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. Additional sites were identified within the database report; however, EDR was not able to map them to specific locations due to insufficient/contradicting address information. These sites were included in the database report as "orphan" sites. Based upon AECOM's review, there does not appear to be any significant concerns associated with any of the orphan sites. A summary of AECOM's review and analysis of the site-specific environmental database report is presented below. A copy of the database report is provided in Appendix B.

Please note that the boundaries of the subject property identified in the database report were modified by the Client after the database report was ordered. The current boundaries of the subject property extend along the mainland up to 31st Street (not just to 33rd Street based on the database order) through 39th Street. The database review includes this additional area within the search radius, so this is not considered a data gap. Site addresses listed in the database report were reviewed for inclusion within the subject property.

Based on AECOM's research, the subject property is not located on or within a 1-mile radius of tribal lands.

5.3.1 Subject Property

The subject property is identified on the New York Spills, Resource Conservation and Recovery Act-Non Generator/No Longer Regulated (RCRA-NonGen/NLR), MANIFEST, Facility Index System (FINDS), Enforcement and Compliance History Online (ECHO), and UST databases reviewed for this assessment.

The Spill listings were identified as follows:

- **39th Street Marine Terminal** (EDR ID 1). Spill No. is 8801529 assigned on May 17, 1988 due to the breakage of a package with a bottle of mustard oil by UPS. The Spill No. closed the next day on May 18, 1988.
- **Brooklyn Marine Terminal EDC -DDC**, 29th Street -39th Street & Water Street.
 - o (EDR ID A3) Spill No. 9714190 was assigned on March 23, 1998 due to unknown petroleum "spillage found around tanks and pumps" during UST removals. The Spill No. was closed July 6, 2005 after monitoring report results were reviewed and three consecutive groundwater sampling rounds at the subject property were found in compliance with NYSDEC requirements. A letter of No Further Action was subsequently issued and the Spill number was closed. The location of the tanks was not specifically described.
 - o (EDR ID 22) Spill Nos. 9714187, 9714188, and 9714189 were assigned on March 23, 1998 due to unknown petroleum "spillage found around tanks and pumps" during UST removals, as listed for the above spill number. The Spill numbers were closed on various dates between January 14, 2005 and April 20, 2005 with reference to the compliant groundwater sampling results. The location of the tanks was not specifically described.

The following non release-related listings were also identified for the subject property:

- **South Brooklyn Marine Terminal** (EDR ID I101) – This facility is identified at the foot of 39th Street and 1st Avenue and is listed on the UST database in association with the removal of five 4,000-gallon diesel steel/carbon steel USTs, two 550-gallon gasoline steel/carbon steel USTs, and one 550-gallon used oil steel/carbon steel UST. The USTs were removed in 1998.
- **Industry City Associates** at 269 37th Street (EDR ID 2). This address is located on the EDR Radius Map within the boundary of the subject property and on Google maps as on 37th Street near 3rd Avenue (off-site). For the purposes of this review, this site is considered as part of the subject property and is listed on the RCRA-NonGen/NLR (with no violations), FINDS, ECHO, and NY Manifest databases.
- **International Terminal Operating Co. Inc.** at 1-39th Street Terminal (EDR ID A4). RCRA NonGen/NLR database for generation of ignitable and corrosive waste with no violations. The facility is also listed on the NY Manifest database. This facility may have been located at the subject property; however, location information is not sufficient to determine the exact location.
- **NYNEX** at 2nd Avenue and 37th Street (EDR ID B16). This facility at 2nd Avenue and 37th Street was listed on the MANIFEST database in association with the generation of lead waste in 1995. This facility may have been located at the subject property; however, location information is not sufficient to determine the exact location.

- **Department Ports International Trade & Comm** at 39th Street between 1st Avenue and the river (EDR ID D10) – This facility was listed on the RCRA NonGen/NLR database in association with the former generation of PCB wastes with recordkeeping violations in 1994. This facility may have been located at the subject property; however, location information is not sufficient to determine the exact location.
- **New York City Transit** at 36th Street and 2nd Avenue. These releases may have been located at the subject property; however, location information is not sufficient to determine the exact location.
 - (EDR ID.G29). Spill No. 0111708 was assigned on March 12, 2002 and was closed on August 2, 2002. The report consisted of a release of 25 gallons of diesel fuel that was subsequently cleaned up.
 - (EDR ID F55) Spill No. 0103012 was assigned on June 18, 2001 and closed on December 23, 2002 and consisted of six gallons of hydraulic oil leaked from a crane lifting panel.

Based on regulatory status of the Spills and lack of reported violations, these database listings are not considered to represent a REC.

5.3.2 Surrounding Sites

According to the environmental database report, numerous sites (over 300) were identified within their respective ASTM E1527-13 and/or EDR search distances from the subject property. Based on AECOM's review of these database listings, none of these sites are expected to present a REC to the subject property based on their distance from the subject property, regulatory status (i.e. closed, no violations found), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient). Due to their proximity to the subject property, the following sites are discussed in additional detail:

- **Gowanus Bay** at 33rd Street and 1st Avenue (EDR ID 5). Spill No. 9606916 was assigned and closed on August 30, 1996 due to raw sewage noted on the water near the street address. This spill does not appear to have impacted the subject property.
- **33rd & 2nd Avenue** (EDR ID C8). Spill No. 9606591 was assigned on August 22, 1996 due to oil and gasoline release and closed November 21, 1996. The 33rd Street Pier collapsed into the Gowanus Canal. Vehicles were on the pier when it collapsed, and a sheen was noted. The incident was handled by the United States Coast Guard. This spill does not appear to have impacted the subject property.
- **39th Street and 2nd Avenue** (EDR ID G27): This location is approximately 100 feet to the south of the subject property. Spill No. 0502776 was assigned on June 8, 2005 because of a ruptured diesel fuel tank owned by Classic Fuel Oil Corporation into the sewer. Spill No was closed on August 22, 2005.
- **Blatchford Base Plant** at 32 33rd Street (EDR ID C76). This facility is located across 2nd Avenue, approximately 100 feet to the southeast and is coded as an Industrial Site listed on the Superfund Enterprise Management System Archive (SEMS Archive, dated 1987, and the Hazardous Waste Disposal Sites (HSWDS) databases. Details were not reported, but the site is not on the NY State Registry of Inactive Hazardous Waste Disposal Sites and is not on the National Priority List.
- **Multiple Con Edison sites, manholes, and vaults** on the streets adjacent to the to the southwest and southeast of the subject property that are listed on the RCRA-Small Quantity

Generator (SQG), Large Quantity Generator (LQG), NY Manifest, FINDS, and ECHO databases. No violations noted.

- **Davidson Pipe Supply Company Inc.** at 990 3rd Avenue (EDR ID AE232, M90, M91, R126). This address is the present day Costco property adjacent to the southeast of the subject property (across 2nd Avenue) and is identified on the NY LTANKS, AST, RCRA NonGen/NLR, FINDS, ECHO, and Spills databases. Spill No. 9510315 was assigned on November 16, 1995 and closed on February 15, 2006. According to information provided in the EDR report, two 4,000-gallon USTs were discovered to be leaking at this property when three USTs were removed from the property (the date of removal was not included). However, no soil or groundwater contamination has been documented at this facility. Spill No. 9506749 was opened on September 1, 1995 due to evidence of a gasoline lead and closed on September 26, 2005. Notes refer to Remedial Site #2-24-025 and additional files from 2006. Due to regulatory status and lack of violations, this facility is not considered a REC at the subject property.
- **FGP Bush Terminals** at 148 39th Street (EDR ID D40). This address is located adjacent to the southwest of the subject property (across 39th Street) and is identified on the LTANKS database in association with the release of approximately 100 gallons of #4 fuel oil during the transfer of the fuel from one tank to another. The release took place in February 1996 and the case was closed in February 2003. Based on the limited volume of the spill and the fact that the case was closed, this release is not anticipated to present a REC at the subject property.

5.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 vapor encroachment screening (VES) as part of this assessment. This screening was conducted in general accordance with the ASTM E2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated October 2015. The objective of the VES was to determine if a VEC exists or if a VEC does not exist.

5.4.1 Subject Property

The subject property has a long history of commercial and industrial use including the presence of USTs. Based on previous subsurface investigations including a January 2022 Phase II ESA that included soil, groundwater, and soil vapor sampling, SVOCs are present above standards in on-site soil and groundwater and elevated concentrations of VOCs were detected in the soil vapor samples. Based on this information, a VEC exists and is considered a REC, in AECOM's opinion.

5.4.2 Off-site

To conduct the VES of the nearby area, AECOM conducted a detailed review and analysis of the site-specific environmental database report with particular focus on the follow two types of sites:

1. Off-site properties that are impacted by chlorinated volatile organic compounds (CVOCs) and/or SVOCs and are located within approximately 1,750 feet of the subject property, and
2. Off-site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the subject property.

The following paragraph summarizes the results of AECOM's VES of the nearby area.

A review of the site-specific environmental database indicates that no chlorinated VOC/SVOC and numerous petroleum hydrocarbon-impacted sites are located with the above-described radii of the subject property. However, all of these sites can be ruled out due to their regulatory status (i.e.

regulatory closure has been issued), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient). In addition, the subject property vicinity has historically been used for industrial purposes and facilities which were present prior to current environmental regulations may not be captured in the EDR database report. Based on this information, it is AECOM's opinion that a VEC may exist at the subject property due to an off-site source.

5.5 Agency File Review

5.5.1 Local

AECOM reviewed online information on the New York City Department of Finance and Department of Buildings websites. This information is incorporated throughout this report as appropriate.

AECOM submitted FOIL request to the NYCDEP. As of the date of this report, a response to AECOM's FOIL request to this agency has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from this agency to our FOIL request will significantly alter the conclusions or recommendations of this report. However, if information is received from this FOIL request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt

5.5.2 State

In addition, AECOM submitted FOIL requests to the to the NYSDEC and the NYSDOH. A response was received from the NYSDEC on February 18, 2022. Several documents were returned, including:

- A NYSDEC Order on Consent (DEC File No. R2-20091218-723). The respondent is the New York City Economic Development Corporation and lists the site as "39th Street Pier, Brooklyn, NY, Kings County, Tax Block 662 part of Lot 1". The document describes State Pollutant Discharge Elimination System (SPDES) permit violations observed during several visits in 2009 and one in 2011.
- A "Sediment and Surface Water Sampling and Analysis Work Plan for South Brooklyn Marine Terminal Dredging" prepared by AECOM and dated June 7, 2021.
- A letter from the NYSDEC to WSP USA Inc regarding "Nationwide Permit 6 Notification and Verification Request, 2021 New York Bay Lateral Survey Program" approving a sampling plan in the Raritan Bay, Lower NY Bay, and Atlantic Ocean.

These documents address sediment work and sediment and turbidity violations that affect the water bodies adjacent to the subject property. These are not considered RECs to the subject property.

A response was received from the NYSDOH on March 2, 2022 stating no records for the subject property were identified.

AECOM also reviewed the following databases:

- NYSDEC, Spill Incident Database search. The subject property was identified in the database with five spill numbers (8801529, 0714187, 9714188, 9714189, 9714190). Spill No. 8801529 was listed as an unidentified material and was assigned on May 17, 1988 and closed on May 18, 1988. related to unknown petroleum in the soil. The remaining four spill numbers were assigned on March 23, 1998 and closed in 2005.

- NYSDEC, Bulk Storage Database search. The subject property was not identified in the database.

5.5.3 Federal

AECOM searched the U.S. EPA's Envirofacts and Superfund Enterprise Management System (SEMS) online databases. The SEMS database replaced the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) which has since been retired. SEMS includes the same data fields and content as CERCLIS. The Envirofacts database retrieves information obtained from 17 national systems, including the CERCLIS, Superfund program (NPL sites), hazardous waste sites, and potential hazardous waste sites. The subject property was not listed on the Envirofacts or SEMS databases.

6. Findings and Opinions

AECOM performed a Phase I ESA Update of the subject property in conformance with the scope and limitations of ASTM E1527-13, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

The following sections summarize the findings and opinions of this Phase I ESA Update of the subject property.

6.1 Recognized Environmental Conditions

The following RECs were identified during this assessment:

- The subject property has a long historical use for commercial and industrial purposes, including the presence of urban fill and USTs. This historical use has driven numerous on-site subsurface investigations. The soil and groundwater data obtained from these subsurface investigations indicated semi-volatile organic compounds (SVOC) and metals are present in the soil and groundwater at the subject property at concentrations exceeding regulatory standards. These soil and groundwater impacts are considered a REC.
- An abandoned transformer labeled as PCB-containing with less than 50 ppm PCBs was observed in the southeastern portion of the N2 Shed. Staining on the floor underneath the transformer was observed; however, AECOM was unable to determine if this was oil or water. The labeled PCB transformer with staining visible on the floor underneath it is considered a REC.
- During the 2018 Phase I ESA, an abandoned transformer was observed in the Tower Building. Subsequent to the 2018 Phase I ESA, the soil around the transformer was sampled and elevated PCBs were detected. Information pertaining to the current status of this abandoned transformer or the impacted soil is unknown as AECOM did not have access to the interior of this building at the time of the current site visit. Based on the lack of additional information, this transformer and associated PCB-impacted soil is considered a REC, in AECOM's opinion.

Based on the above-described activities, no controlled RECs (CRECs) were identified in connection with the subject property.

6.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the subject property.

6.3 Historical Recognized Environmental Conditions

The following HRECs were identified during this assessment:

- Based on the information provided, Spill Nos 9714187, 9714188, 9714189, and 9714190 were assigned when impacted soils were identified during the removal of eight USTs, two ASTs, associated fuel pumps and piping, and four hydraulic lifts from the subject property on March 20, 1998. These Spill Numbers were closed at different times from January to July 2005. The USTs ranged in size from 550 gallons to 4,000 gallons and contained gasoline, diesel, and waste oil. Post-excavation soil sampling was conducted and revealed VOC, SVOC, and lead regulatory exceedances. The Spill Numbers were closed in 2005 after soil and groundwater investigations were completed to the NYSDEC's satisfaction. Based on the closed status, these releases are considered an HREC, in AECOM's opinion.

- An additional Spill Nos 8801529 was assigned on May 17, 1988 due to a release of mustard oil by UPS and was closed the next day. Based on the closed status, this Spill is considered an HREC, in AECOM's opinion.

6.4 Vapor Encroachment Conditions

The following VEC was identified during this assessment:

- The subject property has a long history of commercial and industrial use including the presence of USTs. Based on previous subsurface investigations including a January 2022 Phase II ESA that included soil, groundwater, and soil vapor sampling, SVOCs are present above standards in on-site soil and groundwater and elevated concentrations of VOCs were detected in the soil vapor samples. Based on this information, a VEC exists and is considered a REC, in AECOM's opinion.

Based on this information, a VEC exists and is considered a REC, in AECOM's opinion.

6.5 De Minimis Conditions

The following DMCs were identified during this assessment:

- Areas of de minimis staining were observed on concrete and asphalt surfaces (ranging in size from approximately one square-foot to 20 square-feet) throughout the subject property, both inside the buildings and in the open exterior areas. The majority of the sources of these minor stains could not be identified due to the age and multiple uses of the subject property but are likely related to motor fuels and hydraulic fluid. Based on the limited extent of the staining, these areas of staining are considered DMCs, in AECOM's opinion.

7. Conclusions

We have performed a Phase I ESA Update in conformance with the scope and limitations of ASTM E1527-13 of located along Second Avenue between 31st and 39th Streets in Brooklyn, Kings County, New York, the subject property. Any exception to, or deletions from, this practice are described in Sections 1.3 through 1.5 of this report. This assessment has revealed the following RECs, listed below, and no evidence of CRECs in connection with the property.

The following RECs were identified in connection with the subject property:

- The subject property has a long historical use for commercial and industrial purposes, including the presence of urban fill and USTs. This historical use has driven numerous on-site subsurface investigations. The soil and groundwater data obtained from these subsurface investigations indicated SVOC and metals are present in the soil and groundwater at the subject property at concentrations exceeding regulatory standards. These soil and groundwater impacts are considered a REC.
- An abandoned transformer labeled as PCB-containing with less than 50 ppm PCBs was observed in the southeastern portion of the N2 Shed. Staining on the floor underneath the transformer was observed; however, AECOM was unable to determine if this was oil or water. The labeled PCB transformer with staining visible on the floor underneath it is considered a REC.
- During the 2018 Phase I ESA, an abandoned transformer was observed in the Tower Building. Subsequent to the 2018 Phase I ESA, the soil around the transformer was sampled and elevated PCBs were detected. Information pertaining to the current status of this abandoned transformer or the impacted soil is unknown as AECOM did not have access to the interior of this building at the time of the current site visit. Based on the lack of additional information, this transformer and associated PCB-impacted soil is considered a REC, in AECOM's opinion.
- The subject property has a long history of commercial and industrial use including the presence of USTs. Based on previous subsurface investigations including a January 2022 Phase II ESA that included soil, groundwater, and soil vapor sampling, SVOCs are present above standards in on-site soil and groundwater and elevated concentrations of VOCs were detected in the soil vapor samples. Based on this information, a VEC exists and is considered a REC, in AECOM's opinion.

8. Environmental Professional Statement

Ms. Megan Dascoli was the Environmental Professional (EP) for this project. Ms. Dascoli's EP statement is below and her resume is provided in Appendix C:

I declare that, to the best of my professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

SECOND AVENUE/ 33RD STREET TO 39TH STREET
BROOKLYN, NY 11232

COORDINATES

Latitude (North): 40.6579240 - 40° 39' 28.52"
Longitude (West): 74.0111660 - 74° 0' 40.19"
Universal Transverse Mercator: Zone 18
UTM X (Meters): 583593.8
UTM Y (Meters): 4501043.0
Elevation: 3 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 12 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQQ: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQQ list, as provided by EDR, and dated 09/13/2021 has revealed that there are 8 RCRA-VSQQ sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 01/06/2022 has revealed that there are 11 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 09/30/2021 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/09/2021 has revealed that there are 33 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 17 NY UST sites within approximately 0.25 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS UST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 87 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY DRYCLEANERS: A listing of all registered drycleaning facilities.

A review of the NY DRYCLEANERS list, as provided by EDR, and dated 09/02/2021 has revealed that there is 1 NY DRYCLEANERS site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
KANYA CLEANERS Facility Id: 2-6102-00440	1626 2ND AVENUE	S 0 - 1/8 (0.026 mi.)	G59	155

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 3 NY HSWDS sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States

EXECUTIVE SUMMARY

from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
KINGS COUNTY WORKS	55TH ST. AND 1ST AVE	SW 1/2 - 1 (0.771 mi.)	AS310	1230

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY TRANSFERRED TO I. ISLAM 4/27/05- The site is under remediation by O'Brien-Kreitzberg (OBK). Reviewed the quarterly monitoring report (Oct.-Dec./04). There are only 2 groundwater monitoring wells (MW-B-04 & MW-D-05)under quarterly sampling. Sampling results from well MW-B-04 exhibited no exceedances of VOCs and SVOCs in three consecutive events and as such will be dropped from monitoring. The other monitoring well was not accessible during last two sampling events due to construction materials being stored over the well. However, effort is being made for sampling this well in the forthcoming quarterly event. No Free Product was observed in any of the monitoring wells.- II 7/6/05- Reviewed the monitoring report dt. May 24, 2005 where URS has presented the latest (Mar./05)GW sampling compliant results from the lone monitoring well MW-D-05 and requested for the Spill Closure . Based on the presented data and URS's request, the spill case is closed and NFA letter issued. - II."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:
 Registry ID: 110067687355

Environmental Interest/Information System:
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 005
Tank Id: 16611
Material Code: 0002
Common Name of Substance: #4 Fuel Oil (On-Site Consumption)

Equipment Records:

L00 - Piping Leak Detection - None
J02 - Dispenser - Suction Dispenser
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
C01 - Pipe Location - Aboveground
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 07/01/1983
Capacity Gallons: 6000
Tightness Test Method: 03

 Registry ID: 110067688764

Environmental Interest/Information System:
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "8/5/19 - Sekhon On 8/3/19 notifier reported a diesel fuel release of up to 100 gallons on the roadway asphalt located at 3901 2nd Avenue in Brooklyn, NY. There were no soils or drains reported to have been impacted by the release. First Call Environmental dispatched to proceed with the cleanup. 0300 ET First Call Environmental are at the location searching for the release. 0340 ET First Call Environmental found the release and confirmed 75 gallons of diesel fuel released onto the street asphalt in a 200' x 1' trail. Absorbents are being placed down and the truck is no longer on site. No drains were found to be impacted by the release. The area is a side street near the harbor and there is no traffic control needed to clean the release. 0438 ET First Call completed the cleanup at this time. The absorbents were swept into 2-55 gallon metal drums. No drains were impacted. First Call is departing site with the waste. 8/8/19 - Sekhon 3:15 pm (8/7/19) - Site visited by DEC Sekhon, spill cleaned up. Case closed."
Not reported
Remarks: "truck hit debris in the road and caused a hole in the tank, leak is still active, clean up pending"

(212-479-5590, BNathe@Langan.com). It is a historical spill. The site is used for steel shop and possibly doing steel finishing process work. They are doing the investigation for purpose of potential property transaction. They have installed soil borings and found stain and odor. They are collecting samples now. They have installed 2 soil borings now and there are still a couple more to go. The soil borings were advanced to 13 feet and hit groundwater at 7 feet. Stain and odor were found at 7 feet. Soil samples were collected and will collect groundwater sample. The samples will be run for Part 375 whole list. The site will be possibly be applied for state/city BCP. They will finish the work today and the lab results will be available in a week or so. Not known of any future development plan. DEC need the contact information of the owner/buyer/potential developer. Email to B. Nathe for the contact information and the sampling results upon available. 8/31/15- left message for Brandon for update. 7/22/16- DEC piper sent email to Brandon requesting update."

Remarks: "Soil borings showed contamination. Clean up is unknown."

 Update By: HMDUDEK
 Site Description: "Location: The 22-36 Second Avenue site is a one-acre site located in an urban area, in the Gowanus area of Brooklyn, New York (Kings County). The site is bounded by 5th Street to the North, Second Avenue to the east, and the Gowanus Canal to the south and west. Site Features: The site is flat and has four one-story buildings which cover most of the site. Current Zoning and Land Use(s): The site is

Map ID

22-36 SECOND AVENUE (Continued)

S117936671

located in an M2-1 manufacturing district. The site is currently occupied by a metal shop, a wood shop, a food distributor and a clothing distributor. Past Use of the Site: Past uses of the site include sulfur works; manure dump; operations and storage of various materials, including cement, asphalt, paint, cork materials, finishing and cutting; cork slab plant; iron oven; and a switch house. Five petroleum spills were reported on the site between 1994 and 2015. One spill, reporting gross soil contamination and free-phase petroleum-like material in soils, is currently open. Site Geology and Hydrogeology: Historic fill extends from the surface cover to depths ranging from 11 to 15 feet below ground surface. The fill generally consists of brown coarse- to fine-grained sand with variable amounts of wood and brick. Below the fill, a layer of native organic clay extends to a depth of 25 to 35 feet below ground surface. The clay is underlain by glacial till. Bedrock occurs at approximately 140 feet below ground surface. Groundwater was observed at about 7 feet below ground surface and is inferred to flow northwest towards the Gowanus Canal."

Env Problem:

"Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and pesticides. Based on investigations conducted to date, the primary contaminants of concern include polyaromatic hydrocarbons (PAHs), 4,4-DDT, acetone, trivalent chromium, copper, lead, mercury and zinc. Soils - Soil borings were advanced to a depth of 12 feet below ground surface at three on-site locations. Two samples were taken from each boring. Acetone was found at concentrations up to 1.6 mg/kg (the unrestricted use Soil Cleanup Objective (SCO) is 0.05 mg/kg). The SVOC found at the highest concentration was Benzo(b)fluoranthene at 44 mg/kg (the SCO is 1 mg/kg). Six additional SVOCs were found at maximum concentrations ranging from 4.9 mg/kg to 38 mg/kg. The SCOs for these SVOCs range from 0.33 mg/kg to 1 mg/kg. The pesticide 4,4-DDT was found at concentrations up to 0.018 mg/kg (the SCO is 0.0033 mg/kg). Trivalent Chromium was found at concentrations up to 34 mg/kg (the SCO is 30mg/kg). Copper was found at concentrations up to 2,200 mg/kg (the SCO is 50 mg/kg). Lead was found at concentrations up to 540 mg/kg (the SCO is 63 mg/kg). Mercury was found at concentrations up to 19 mg/kg (the SCO is 0.18 mg/kg). Zinc was found in concentrations up to 710 mg/kg (the SCO is 109 mg/kg)."

Health Problem:

"Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion on and off-site."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

 DEC Region: 2
 DER Facility ID: 344636
 DEC Memo: "4/1/08 bf: Called Harry Gelb (718)788-2600. He is not sure of why tank failed. he believes it may have been caused when the driveway was repaved. I confirmed mailing contact and address. Mr. Damast is owner of the building. Told him he can register both tanks for 2-608583 and 2-608582 under one registration since they are on same property. Address for site location for 2-608582 is incorrect and is the mailing address. I told him this needs to be corrected. Sent tff letter to: Abraham Damast 3913 2nd Ave. Realty LLC 4312 2nd Avenue Brooklyn, NY 11232 09/05/08-Hiralkumar Patel. received call from Isaac from Eastmond. he mentioned that they did isolation test and found tank, fill line and supply/return lines tight. they found problem in vent pipe. asked Isaac to submit isolation test result. 9/8/2008 Isaac submitted a writeup listing the work done and there

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. 06/05/2001 Zhao contacted Rick Spadalik at 1:45pm. 6 (550 gal) gasoline tanks and 1 (550 gal) waste oil tank were pulled out yesterday and found contamination soil which has been stock piled. Tanks were encased in concrete with concrete pad at bottom of tanks. American Environmental will possibly perform site assessment and will clean up site. At this time, DEC did not receive tank removal notification. 09/20/2001 Tank closure report from AEAC was received on 08/31. 10/15/2005 Called Russel Cararo (718-499-2121) but did not receive callback. Talked with Dan Hershberger at American Env'tl - he said that no further work was done at site by American Env'tl after tank removal. - Bishop 10/30/06 Reassigned from Bishop to Sun. (MS) 12/18/06 Sun sent letter to Russel Cascardo (4001 2nd Ave Inc.) at 4001 2nd Ave, Brooklyn, on 12/14/06 requiring that the following be submitted to the NYSDEC by 1/14/07: To rectify this problem, a letter report asserting a cause of the release and summarizing the cleanup activities, observations, post-excavation sampling results (if necessary), and also including contaminated material disposal manifests or any other documentation (i.e. invoices, bills, etc.) of cleanup activities must be submitted to this office by January 14th, 2007, referencing the spill case number (see above) and the site address. (JS/MS) 3/1/07: Second letter sent (same as above) to be submitted by 4/2/07. (JS/MS) 8/6/07: All letters are being returned. Will try ACRIS to identify RP and address and if not successful, will visit the site. (JS/MS) 8/14/07: Sun/Sellberg sent another letter to Russel Cascardo (4001 2nd Ave Inc.) at P.O. Box 200825, Brooklyn, on 8/13/07 requiring the same as above be submitted to the NYSDEC by 9/17/07. This address was found on public property documents found on

ACRIS website as well as Property Shark. (JS/MS) 9/18/07: Mr. Cascardo hand delivered TCR. Slight exceedences in soil samples however, no GW sample was collected even though it was noted to have a slight petrol-like odor. Will require collection of GW sample from within middle of former tank excavation area. (JS/MS) 9/28/07: Mr Cascardo believes that a sample had been collected during a separate field inspection. MS said he had 2 weeks to submit documentation proving this. If he cannot locate report, he understands he will have to conduct another sampling event. (JS/MS) 04/07/08: 2nd SIR letter send. Due 5/2/308. (JS/MM) 05/05/08: Zeb Youngman from PW Grosser called to notify the Department that PWG would be the consultant. Waiting for signed proposal and payment from Cascardo. (JS/MM) 06/18/08: Reviewing Subsurface Investigation/Spill Closure report. 3 MTBE hot spots (JS/MM) 07/02/08: Install 3 additional MW, implement groundwater monitoring program for a minimum of at least one year. (JS/MM) 08/05/08: Transferred to Kolleeny/Mandac. - JK 10/15/08: PWGrosser was not given permission to install additional wells by owner (JK/MM) 01/06/09: Spoke with Z. Youngman (PWGC), no work conducted on-site. Still needs permission from RP to move forward. Will need to send RP a letter. (JK/KG) 01/07/09: Letter sent to Russell Cascardo requesting work plan for supplemental subsurface investigation (3 wells to be installed and quarterly GW monitoring program implemented). SSIWP due 02/06/09. Letter sent via certified/return receipt mail. Return receipt rec'd (letter signed for on 1/12/09). (JK/KG) 01/12/09: Rec'd phone call from Zeb Youngman stating he had been given permission from RP to proceed with work. PWGC will submit the work plan. Four monitoring wells will be installed; 2 in the former UST area, 1 upgradient and 1 downgradient of the former USTs. (JK/KG) 01/20/09: Rec'd Monitoring Well Installation / Groundwater Monitoring Work Plan dated 01/19/09 from PWGC - under review. (JK/KG) 01/21/09: Work Plan reviewed. The scope of work includes installation of four monitoring wells, a groundwater elevation survey, collection of groundwater samples quarterly for one year, and submission of quarterly groundwater monitoring reports to NYSDEC. The work plan was approved with one modification; soil samples from each well location must be collected and submitted for analysis of VOCs. Approval letter mailed to RP and emailed to PWGC. The first QMR is due 3/27/09.(JK/KG) 02/23/09: On 1/27/09 rec'd phone call from Youngman stating well installation was scheduled for 2/4/09. (JK/KG) 03/11/09: Rec'd Monitoring Well Installation/First Quarter Groundwater Monitoring Report dated 03/10/09 prepared by PWGC. Under review. (JK/KG) 03/12/09: Four monitoring wells were installed on 2/4/09. Groundwater samples were collected on 2/27/09. Monitoring well MW-2 revealed soil and groundwater contamination. Letter sent to Russell Cascardo approving PWGC's recommendation to continue with quarterly monitoring and reporting. If contamination levels do not decline significantly after 2 additional monitoring events a proposal for an active remedial approach will be necessary. Soil: MW-1, MW-3, MW-4: All VOCs non-detect or below RSCOs MW-2: 1,2,4-Trimethylbenzene 24,300 ug/kg, 1,3,5-Trimethylbenzene 6,970 ug/kg, m&p xylene 9,400 ug/kg, n-propylbenzene 2,230 ug/kg Groundwater: MW-1: MTBE (33.2 ug/L) MW-2: Total VOCs (6,465.5 ug/L), Benzene (96.3 ug/L), Ethylbenzene (1,190 ug/L), m&p-Xylene (4,000 ug/L), MW-3: MTBE (30.2 ug/L) MW-4: MTBE (1.17 ug/L) (JK/KG) 05/19/09: Rec'd a message from Zeb Youngman stating that the next quarterly monitoring event will be performed next week. (JK/KG) 06/15/09: Rec'd Second Quarter Groundwater Monitoring Report dated

6/15/09 from PW Grosser. MW-1, 2, 3, and 4 were sampled on 5/26/09. Groundwater flow direction is to the west. Text states it is easterly, although the site plan and contours indicated it is to the west. Notified PWGC of discrepancy. Groundwater: MW-1: Total VOCs (46.5 ug/L), MTBE (21.2 ug/L), Benzene (1 ug/L), m&p-Xylene (24.3 ug/L) MW-2: Total VOCs (5,057 ug/L), Benzene (165 ug/L), Ethylbenzene (1,629 ug/L), m&p-Xylene (2,340 ug/L) MW-3: MTBE 40.5 ug/L MW-4: All VOCs non-detect (JK/KG) 06/17/09: Rec'd hard copy of QMR as well as pdf of report with correction to the groundwater flow direction on page 2. Groundwater flow is westerly. (JK/KG) 08/27/09: Rec'd Third Quarter Groundwater Monitoring Report dated 8/26/09 from PW Grosser. MW-1, 2, 3, and 4 were sampled on 8/21/09. PW Grosser recommends continued quarterly monitoring and reporting. Groundwater: MW-1: Total VOCs (28.8 ug/L), MTBE (28 ug/L) MW-2: Total VOCs (2,259 ug/L), Benzene (111 ug/L), Ethylbenzene (1,020 ug/L), m&p-Xylene (642 ug/L) MW-3: MTBE 140 ug/L MW-4: 1,2,4-Trimethylbenzene (1.01 ug/L) This site should be re-evaluated for closure or further action after next QMR is submitted. Work plan submitted in 01/2009 approved quarterly monitoring for one year. (JK/KG) 11/3/09 Spill case transferred from J. Kolleeny to J.A. Maisonave. - JAM 11/4/09 Spoke to Zeb Youngman. He will submit latest GW monitoring results. - JAM 12/15/09 Reviewed Fourth Quarter Groundwater Monitoring Rpt submitted by P.W Grosser Consulting (PWGC) dated December 3, 2009. Four on-site monitoring wells were sampled on Nov. 23, 2009. Sample results show total VOC concentration of 1,250 ug/L in MW-2 (decrease in Total VOCs in well MW-2 for 4th round in a row), MTBE concentrations of 18ug/L and 170ug/L in wells MW-1 and MW-3, respectively, and VOCs were below the detection limit in well MW-4 for the fourth round in a row. MW-4 is the most downgradient well, directly downgradient from well MW-2. PWGC states that the contamination seems to be localized to the former UST area around MW-2 and is not migrating off-site. The area is primarily industrial and there is very little exposure risk. They requested spill closure. Report uploaded to eDocs. I issued a letter today stating that the spill cannot be closed at this time and that one more round of groundwater sampling should be conducted. If contaminant levels continue to decline, PWGC should perform a sensitive receptor survey to demonstrate that the residual contamination poses no threat to human health or the environment. If contaminant levels increase, then additional remedial action may be required. Letter uploaded to eDocs. - JAM 2/23/10 Received a call from Zeb Youngman yesterday. He emailed me the lab data for the last monitoring event, which showed an increase in VOC concentrations (double) in well MW-2. I issued an email and suggested that groundwater monitoring continue and a remedy should be proposed to expedite spill closure. A groundwater monitoring report will be submitted. - JAM 6/9/10 Reviewed the 1st and 2nd Quarter Groundwater Monitoring Reports submitted by P.W Grosser Consulting (PWGC) dated Feb 22, 2010 and May 28, 2010, respectively. Groundwater monitoring was conducted on February 16, 2010 and May 21, 2010. Total VOCs in well MW-2 increased from 1250ug/L in November 2009 to 2523ug/L in February 2010 to 3319ug/L in May 2010. Wells MW-1 and MW-3 have MTBE with concentrations of 5ug/L and 55ug/L, respectively. Well MW-4, which is located directly down-gradient of well MW-2, had ND levels of VOCs. PWG recommend performing one more round of groundwater sampling and if VOC concentrations increase, then they will propose either chemical oxidation or enhanced bioremediation by injecting ORC. Reports are uploaded to eDocs. - JAM 8/26/10 Reviewed 3rd

S105057879

Quarter Groundwater Monitoring Rpt submitted by P.W Grosser Consulting (PWGC) dated Aug 23, 2010. Groundwater monitoring was conducted on Aug 20, 2010. Total VOCs in well MW-2 decreased slightly from 3,319 ug/L in May 2010 to 3,027 ug/L in Aug 2010. Wells MW-1 and MW-3 showed increase in MTBE with concentrations of 35 ug/L and 373 ug/L, resp. Well MW-4, which is located directly down-gradient of well MW-2, had ND levels of VOCs. PWG recommend continuing groundwater sampling. Reports are uploaded to eDocs. - JAM 12/03/10: This spill case transferred from J. Maisonave to J. Kolleeny. Changed spill priority rank to P2, since GW monitoring is being performed. Received hard copy of 4th Quarter 2010 GW Mon Rpt by PW Grosser, dated 11/30/10; sent an email to Zeb Youngman of PWG requesting pdf file of rpt; he sent pdf file by email same day, in eDocs. Will review. - JK 01/04/11: Reviewed GW Monitoring Rpt - Fourth Quarter 2010 by PW Grosser Consulting, dated 11/30/10, received 12/3/10 (in eDocs). Rpt presents results of Nov. 2010 GW sampling event showing decreases in contam in several wells: MW-2 had total VOCs of 1,203 ug/L, down from 3,027 ug/L in Aug. 2010; MW-3 had 286 ug/L tVOCs, down from 373 ug/L in Aug. 2010; MW-1 had 25 ug/L tVOCs, down from 35 ug/L in Aug. 2010. Well down-gradient of worst well (MW-2), MW-4, had only minor exceedance for xylene (6 ug/L). PW Grosser recommends spill closure. I sent letter (in eDocs) to Mr. Russell Cascardo (Fleetrecovery@yahoo.com), cc to Zeb Youngman of PW Grosser, saying spill cannot be closed yet, requesting one or two more sampling events of wells MW-2 and MW-4 to confirm downward trend toward levels acceptable for closure. - JK 03/01/11: Reviewed GW Monitoring Rpt - 1st Quarter 2011 by PW Grosser Consulting, dated 2/22/11 (in eDocs). Rpt presents results of GW samples collected on 2/16/11 from wells MW-2 and MW-4, as requested in my 1/4/11 letter. Data show MW-2 had 1,193 ug/L total VOCs, down slightly from 1,203 ug/L in Nov. 2010; MW-4 was ND. PW Grosser notes that contam is not migrating off-site, and requests spill closure. I sent email (in eDocs) to Mr. Russell Cascardo, cc to Zeb Youngman of PW Grosser, stating that although contam levels appear stable and not migrating, overall levels are too high for spill closure; said DEC requires that GW monitoring (i.e., sampling of MW-2 & MW-4, gauging of all wells) continue until contam levels decrease toward concentrations appropriate for spill closure, and said if contam does not decline further by natural attenuation, some remedial action may be needed. - J. Kolleeny 06/01/11: Received & reviewed GW Monitoring Rpt - 2nd Quarter 2011 by PW Grosser Consulting, dated 5/31/11 (in eDocs). Rpt presents results of GW gauging/sampling on 5/23/11, showing increases in contam in wells MW-2 and MW-3: MW-2 had 2,462 ug/L total VOCs (up from 1,193 ug/L in Feb. 2011) and MW-3 had 769 ug/L tVOCs (up from 286 ug/L when last sampled in Nov. 2010). PW Grosser recommended continued quarterly monitoring of wells MW-2 & MW-4 to document decreasing trend in VOC concentrations and obtain spill closure. I sent email (in eDocs) to RP, Russell Cascardo, stating that quarterly gauging of all 4 site wells and quarterly sampling of MW-2, MW-3 and MW-4, should continue, noting that fluctuating VOC levels may indicate presence of residual soil contam acting as ongoing source, and that if VOC levels remain elevated or increase, remedial action may be needed to move spill toward closure. - JK 12/09/11: Sent email to Zeb Youngman of PW Grosser: Hi Zeb, I was wondering if you have any updated information regarding this spill site? Was 3rd quarter 2011 GW sampling performed? Please let me know. Zeb sent reply: 3rd quarter was not performed. I had spoken to property owner in July about potential

chemox/ORC injections to close spill file. He told me to hold off on everything. I then sent email to Mr. Russell Cascardo of Fleet Recovery (RP), cc to Zeb Youngman: Dear Mr. Cascardo: In reviewing my files, I realized that I have not received a monitoring rpt for 3rd quarter of 2011 for this spill site. I contacted consultant who had been working on this project (P.W. Grosser) and was informed that all work at site has been discontinued, at your direction. As I explained in email below, sent on June 1, 2011, latest available GW data for site show levels of dissolved contamination that are too high for spill closure, and data over last several sampling events do not demonstrate a clear downward trend in contaminant levels indicative of ongoing natural attenuation processes that might bring about timely spill closure. Add'l GW monitoring is required, and if contaminant levels do not decrease, remedial actions may be necessary to expedite cleanup of spill case. DEC requires that GW monitoring (sampling and gauging of wells) resume immediately and that a rpt with up-to-date GW quality data be submitted by no later than Jan. 13, 2012. Rpt should include recommendations for further action as appropriate, based on data. Failure to comply with this requirement may result in referral of this spill case to our Office of General Counsel to initiate an enforcement action. Please confirm your receipt of this email, and feel free to contact me if you have any questions. Later that day, received email from RP, Russell Cascardo: Thank you for update, there must be a mix up, I never told anyone at that company to stop testing, I will notify them on Monday to start testing again, thank you. - JK 12/13/11: Received email from Zeb Youngman of P.W. Grosser: Jon, I have spoke with Mr. Cascardo and there had been some miscommunication on my end. We will resume monitoring program immediately. - J. Kolleeny 01/09/12: On 1/3/12, received email from Derek Ersbak of P.W. Grosser with attached pdf file of GW Monitoring Rpt for December 2011 (in eDocs). December 2011 GW data show total VOCs in well MW-2 decreased from 2,462 ug/L in May 2011 to 1,246 ug/L. GW flow map shows more northerly flow direction than previous rpts, which showed GW flow to NW. Rpt recommends spill closure. I sent email to Zeb Youngman of P.W. Grosser, cc's to Russell Cascardo of Fleet Recovery (RP) and Derek Ersbak of P.W. Grosser: I've looked over GW Monitoring Rpt for Dec. 2011 for this site. Rpt notes that total VOCs in well MW-2 (only well with significant residual GW impacts) decreased from 2,462 ug/L in May 2011 to 1,246 ug/L in Dec. 2011. Rpt says that based on continuing downward trend of VOCs in MW-2 and fact that there are no impacts in down-gradient well MW-4, P.W. Grosser recommends spill closure. I am glad to see decrease in well MW-2, but I don't agree that this represents continuing downward trend. It's true that Dec. 2011 result was lower than May 2011 result, but samples for two events before May 2011 event, collected in Nov. 2010 and Feb. 2011, both had total VOCs of ~1,200 ug/L. In fact, latest result of 1,246 ug/L (Dec. 2011) can be seen as return to levels seen in Nov. 2009, when total VOCs in MW-2 were 1,250 ug/L. In other words, it seems to me that contamination in MW-2 has plateau-ed at ~1,200 ug/L, with occasional spikes up to 2,000-3,000 ug/L. I consider total VOCs of 1,200 ug/L to be too high to consider spill closure, especially in absence of clear downward trend. Also, GW flow contours for latest sampling event do not show MW-4 as being directly down-gradient of MW-2, but suggest potential gap in down-gradient well coverage, since MW-4 is northwest of MW-2 but latest contours indicate GW flow more directly to north. I have following suggestions for helping to move this spill case

toward closure: 1. For next sampling event, re-develop well MW-2 before collecting samples and see if result is lower. 2. Apply chemical oxidant to area of MW-2 using several temporary injection points advanced immediately up-gradient of well, and continue GW monitoring to see if there is improvement. 3. Excavate well MW-2 and soil in its immediate vicinity (with collection of post-ex end-point soil samples), to remove potential residual soil contam which is keeping VOC levels in that well elevated, then backfill area, replace well and conduct follow-up monitoring to see if there is improvement. It's my understanding that, although significant amount of contam soil was dug out at time of UST removal at site, GW contam was observed during tank pull (sheen and odors), but no actual GW remediation has been performed to date. Therefore, it may be appropriate to consider implementing suggestion 2 or 3. Of course, I am open to other remedial recommendations you might have. Feel free to contact me with any questions or comments. - J. Kolleeny 03/26/12: On 3/20/12, received CD with GW Mon Rpt for March 2012 by P.W. Grosser Consulting, Inc., dated 3/19/12 (in eDocs). Rpt presents GW data for 3/2/12 sampling event, plus historical data. March 2012 results show contaminant levels in worst well, MW-2, decreased significantly, with 254 ug/L total VOCs (down from 1,246 ug/L in Dec. 2011). Well MW-3 had 173 ug/L tVOCs (up from ND in Dec. 2011, but below 769 ug/L in May 2011 and 286 ug/L in Nov. 2010. Down-gradient well MW-4 was ND, consistent with earlier rounds showing ND or only traces of VOCs. PW Grosser concludes that GW contam is not migrating off-site and will naturally degrade over time. They recommend one more round of GW sampling in June 2012 to confirm that contaminant levels are remaining stable and confined to site, and suggest that request for spill closure be reconsidered based on results of June 2012 sampling. On 3/26/12, I sent email (in eDocs) to RP, Russell Cascardo, cc's to Derek Ersbak, James Rhodes and Bryan Devaux of PW Grosser, agreeing with this recommendation. - J. Kolleeny 06/20/12: Reviewed GW Monitoring Rpt - June 2012 by P.W. Grosser Consulting, Inc., dated 6/18/12 (in eDocs). Rpt presents results of GW sampling performed on 6/5/12, plus historical GW sampling data. Worst well, MW-2, had 1,230 ug/L total VOCs, up from 245 ug/L in March 2012 but consistent with Dec. 2011 result of 1,246 ug/L tVOCs. Well MW-3 had 14 ug/L MTBE, down from 173 ug/L MTBE in March 2012. Down-gradient well MW-4 was ND. PW Grosser concludes that residual contam is not migrating off site, contam has decreased from higher levels found when wells were first installed & sampled, and residual contam will naturally degrade over time. In addition, down-gradient properties are manufacturing-industrial, not residential - no schools, hospitals, day care ctrs, etc. Based on all these factors, PW Grosser recommends spill closure. I discussed with my supervisor Vadim Brevdo, and decided to close spill case. Issued spill closure letter (in eDocs) to RP Russell Cascardo, with cc's to Derek Ersbak, James Rhodes and Bryan Devaux of PW Grosser. - J. Kolleeny "

Remarks: "CALLER STATES THERE IS A FORMER GASOLINE STATION AND NOW IT IS DISCOVERED THAT THERE IS GAS LEAK FROM ONE OF THE TANKS. 20 YDS OF SOIL HAVE BEEN STOCK PILED SO FAR. ALL SOIL IS GOING TO BE REMOVED"

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CON EDISON VAULT #946 (Continued)

S112808597

DEC Memo: "1/7/12-Vought-Primary off-hours responder. This spill assigned to Con Ed Unassigned as part of Con Edison minor spill portfolio review and possible closure. Initial EMIS #232365 downloaded into e-docs, entered into Cross Reference Field and deleted from Proxy. As per initial EMIS, FOD SUPERVISOR PINEDO REPORTS WHILE CHECKING THE STATUS OF HTV-946 HE DISCOVERED APPROX 1 QUART OF UNKNOWN OIL ON 3 GALLONS OF WATER. CONTAINED TO STRUCTURE. THE HTV IS LOCATED IN BUSH TERMINAL BLDG#26(CUST PROPERTY). THE FEEDER INVOLVED IS SD3129. ACCT#C3526. PINEDO WILL CALL BACK WITH ENV TAG# & C.O.C.# SPOKE WITH ERT NEIL SKOW TO CONFIRM THIS IS A REPORTABLE INCIDENT. CIG MUGGEO NOTIFIED 0025HRS. 2/24/17 - Austin - This vault, containing customer (non-Con Ed) equipment) had flooded during Storm Sandy - Con Ed contained and cleaned up the spill, and the equipment was removed - See document files for further information - Spill closed - end"

Remarks: "Caller reporting 1 Qt of an unknown oil on top of 3 gallons of water. Caller reports it is on private property."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 62647
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F00 - Pipe External Protection - None
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 10000
Tightness Test Method: NN
Date Test: Not reported

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Id: 216615
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
K00 - Spill Prevention - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
I02 - Overfill - High Level Alarm
E00 - Piping Secondary Containment - None
C01 - Pipe Location - Aboveground
J02 - Dispenser - Suction Dispenser
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 02/21/2007
Capacity Gallons: 2500
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 08/18/2013
Register: True

Tank Info:

Tank Number: NY4841A001
Tank Id: 227599
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

K01 - Spill Prevention - Catch Basin
E00 - Piping Secondary Containment - None
I02 - Overfill - High Level Alarm
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
A00 - Tank Internal Protection - None
F00 - Pipe External Protection - None
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
J00 - Dispenser - None
L00 - Piping Leak Detection - None
D00 - Pipe Type - No Piping

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron

Tank Status: In Service
Pipe Model: Not reported
Install Date: 10/01/2001
Capacity Gallons: 2000
Tightness Test Method: NN
Date Test: Not reported

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Company: FEDERAL POWER PLY GSA
Spiller Address: 26 FEDERAL PLAZA
Spiller Company: 001
Contact Name: Not reported
DEC Memo: "also know as 850 3rd Ave. see also 93-12153 & 94-07229. unable to reach a GSA contact. Possible remediation under 94-07229. Previous note by RDDECAND on 3/15/06 Spill transferred back to R-2 3/5/08 - Austin - Assigned to Ketani for further investigation - end 3/13/08 - Raphael Ketani. I began working on the case. Spill number 93-12153 was monitored by a former spills worker, Kerri O'Dowd. She didn't put in any case notes into the database. The spill was a 200 gal. overflow. It happened because someone had the wrong tank size. DEP was contacted at 10:30AM and GSA arrived at 2:15PM. Sand and Speedi Dri were applied to the spill. The case was closed on 1/15/94. The site address is 850 3rd Avenue, Brklyn. (29 St. & 3rd Ave.). Case 94-07229 was managed by Kerri O'Dowd. There were no case notes. Contaminated soil was discovered and was being removed as it was being excavated. She closed the case on 3/29/95. 3/17/08 - Raphael Ketani. A copy of the original August 1993 Site Characterization Report was found in the file cabinet. It was produced by Woodward-Clyde Consultants, Inc. It was prepared for Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, Brooklyn (212) 926-2878/(212) 594-2118. According to the soil analytical tables in the report, there was no significant contamination. Table 4-2 for the groundwater samples didn't list any significant contamination, either. There was a fold out site map which showed the locations of the six formerly active tanks. The PBS case is #2-601672. It shows that six tanks were closed in place on either 8/1/94 or 9/1/94. Four other tanks were installed on 9/1/94. Tank #7 is in service and tanks #8 to #10 are temporarily out of service. A note in the file that I did find said that there were records in the open file section of the storage area downstairs. I checked the file storage room, but found nothing. I also asked around in the Division of Environmental Remediation, but no one had heard of the case for the site. I checked the E-docs and found the following: The E-docs contained a transmittal letter dated 8/10/93 stating that this was the second revision of the Site Characterization Report. An estimated 2050 cu. yds of soil will be excavated and an additional 450 cu. yds. of oil contaminated soil. Tanks #3 and #4 are scheduled to be removed, along with an 1100 gal. tank. Two 20,000 gal. tanks will be abandoned in place. Groundwater remediation is not necessary based upon the analytical results. A second round of groundwater sampling will take place August 1993. The parties involved are: Woodward-Clyde Consultants (212) 594-2118 Roy Feinzig (914) 682-4895, Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, White Plains, NY, 10601 Charles Evans (718) 330-7474, Federal Building Manager. General Services Administration, Public Buildings Service, Contract Section, 26 Federal Plaza, rm. 1611, NY, 10278; GS0wP94CUC0055 A 10/4/93 E-doc note from Ms. O'Dowd states that they will install 3 new USTs. There are 6 USTs on site: 5 fuel oil (4 20,000 gal. tanks, 1 1100 gal. tank); 1 20,000 gal. gas tank. Groundwater is at 5.5' to 8.5' below grade. Nine soil borings will be done and 5 monitoring wells will be installed. MW-3G is in the area for the new UST. Groundwater is at 6' and dewatering will have to take place in order to install the new tank. USTs #3 and #4 are impacted. Fuel contaminated soil will have to be removed. A 8/9/93 E-doc note from Ms. O'Dowd states that MW-1 has no VOC hits MW-2 has less than 5 ppb MW-3G has hexane 5.8 ppb,

ethylbenzene <50 ppb, xylene .50 ppb MW-6 has 3 ppb of hexane MW-9 has no VOCs There was a 10/18/94 letter from Environmental Data Consultants to the GSA requesting well installation locations and regarding the NYCFD and NYC Building Department violations. Environmental Data Consultants, Inc., 55 Alder Street, Ste 2, South Yonkers, NY, 10701, (914) 968-1508. Dewatering took place to install the new tanks, but a SPDES permit wasn't needed as the discharge rate was below the permit lower limit and the water wasn't contaminated. Soil samples need to be taken at all of the closed tanks and the PBS record needs to be updated. The 9/6/94 E-doc note states that there is 2 to 3 of oil in MW-3G. USTs #3 to #5 are to be removed. Wells MW-3 and MW-6 need to be replaced as they were destroyed. Many of the hits in Table 1 of the analyses summary table also appear in the blanks. So these analytes can be negated. I tried to contact Charles Evans, but the phone number was not in service. I tried to reach Environmental Data Consultants, but the phone number was not in service. I tried to reach Rose, Beaton & Rose, but the phone number belonged to another company. I tried to reach Woodward-Clyde, but the phone number belonged to another company. 3/18/08 - Raphael Ketani. I found a later case from 1999 for the same site - #9908767. It involves the test failure of three 30,000 gal. tanks. Contact people were listed on the spill report. They are: Steve Ferman (718) 340-5268, at the site; John Harris (718) 965-5147 of the General Services Administration; and Tom Burke (212) 264-0800 of the General Services Administration, Technical Services, 26 Federal Plaza, rm. 1611, NY. I tried to contact Mr. Burke, but could only leave a message. I tried to contact Mr. Harris, but no one picked up. I tried to contact Mr. Ferman, but the number was no longer in service. William (Bill) De Nyse (de-nice), Senior Industrial Hygienist, (212) 264-0506 called to ask what DEC had in the way of reports and documentation for the spill case. I told him we had the August 1993 Site Characterization Report that was produced by Woodward-Clyde, a Second Revision SCR and some small letters. He asked that DEC provide him the reports as he doesn't have them. He added that he was the contact person at the GSA and that he will try to help get the case closed. Mr. De Nyse asked what should happen if he can't find the closure reports. I told him that DEC will ask that a new investigation take place. I made copies of the reports and sent them to him. 4/11/08 - Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message. His phone greeting said that he will be out until 4/21/08. I will try him then. 6/10/08 - Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message. I got ahold of Mr. Burke. He said that right now they are putting the contract out for bid. He said it will take some time in order to get a contractor lined up and get the investigation started. I told him to keep me updated. He added that Mr. De Nyse is the point of contact. 6/12/08 - Raphael Ketani. Mr. De Nyse called back. He said he is the regional engineer and the project is now being handled by a field (local) engineer at the site. The person is Rashid Mattoo (718) 254-7141 at 10 Metro Tech, Brklyn. Mr. De Nyse said that Mr. Mattoo is the contact person from now on. He added that right now they are trying to get funding to do the investigation. They have a scope of work, also. 8/12/08 - Raphael Ketani. I tried to contact Mr. Mattoo regarding the site investigation, but could only leave a message. Mr. Burke called me back. He said that the contractor has been chosen and they expect to go to contract next week. He added that they will start in a week or two. 8/18/08 - Raphael Ketani. The case is being

Tank Info:

Tank Number: 010
Tank Id: 179201
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

D00 - Pipe Type - No Piping
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
F01 - Pipe External Protection - Painted/Asphalt Coating
G99 - Tank Secondary Containment - Other
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
K01 - Spill Prevention - Catch Basin
H99 - Tank Leak Detection - Other

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Temporarily Out of Service
Pipe Model: Not reported
Install Date: 09/01/1994
Capacity Gallons: 550
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Site Code: 458025
 Control Name: Ground Water Use Restriction
 HW Code: C224156
 Control Code: 08
 Control Type: INST
 Dt record added: 12/04/2013
 Dt rec updated: 12/31/2021
 Updated By: SNBOLLER
 Site Code: 458025
 Site Description: "Location: The Former East Coast Industrial Uniform Site is located in the City of New York, Borough of Brooklyn (Kings County) at 35, 43 and 49 (formerly 39) Skillman Street. It is currently identified as Section 7, Block 1886, Lots 10, 11 and 12 on the NYC tax map. Site Features: The site was vacant and was formerly developed with three attached buildings and a parking area. The site is now occupied by three new 6-story residential apartment buildings. Each building consists of 16 apartments with a mix of 3, 4 and 5 bedroom units to better serve the needs of the community. Each building features a full basement level with utility rooms, residential living space, and 8-9 parking spaces and outdoor recreation areas on the roof. Current Zoning/Uses: The site has historically been zoned for light industrial/commercial applications. In 2001, the area was rezoned as a Special Mixed Use district (MX4) which added an R-6A residential zoning to the area. The surrounding land use includes 3 new multi-family residential buildings to the east, four new multi-family residential buildings and a vacant commercial building to the west, older multi-family walk up style buildings to the south and a community/office building to the north. Past Use of the Site: The Site was developed prior to 1887 with a Brooklyn Union Gas Gasometer (gas holder) in the northern third of the property and multiple

residential homes and stores on the southern portion. The holder was operated solely as a gas distribution holder; no gas production facilities were present. By 1935, the holder was removed and the northern section was vacant until approximately 1941 when it was a parking lot and then a furniture/framing company. From 1974 to 2008, East Coast Industrial Uniform, an industrial dry-cleaning operation, was operating on the site. There are several concrete lined trenches cut through the southeast end of the building which were likely used to contain wash water from numerous washing machines prior to discharge through the small aboveground oil water separator located in the southeast corner and finally to public sewer. An abandoned-in-place underground storage tank is located near the roll-up gate entrance to the building. The underground storage tank (UST) is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest. "

Env Problem: "Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m³ and TCE was detected at 687 ug/m³. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Remediation at the site has been completed. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

Name: FORMER EAST COAST INDUSTRIAL UNIFORM
Address: 35, 43 AND 49 SKILLMAN STREET
City,State,Zip: BROOKLYN, NY 11205
Site Code: 458025
Control Name: Environmental Easement
HW Code: C224156
Control Code: J
Control Type: INST
Dt record added: 12/04/2013
Dt rec updated: 12/31/2021
Updated By: SNBOLLER
Site Code: 458025
Site Description: "Location: The Former East Coast Industrial Uniform Site is located in the City of New York, Borough of Brooklyn (Kings County) at 35, 43 and 49 (formerly 39) Skillman Street. It is currently identified as Section 7, Block 1886, Lots 10, 11 and 12 on the NYC tax map. Site Features: The site was vacant and was formerly developed with three attached buildings and a parking area. The site is now occupied by three new 6-story residential apartment buildings. Each building consists of 16 apartments with a mix of 3, 4 and 5 bedroom units to better serve the needs of the community. Each building features a full basement level with utility rooms, residential living space, and 8-9 parking spaces and outdoor recreation areas on the roof. Current Zoning/Uses: The site has historically been zoned for light industrial/commercial applications. In 2001, the area was rezoned as a Special Mixed Use district (MX4) which added an R-6A residential zoning to the area. The surrounding land use includes 3 new multi-family residential buildings to the east, four new multi-family residential buildings and a vacant commercial building to the west, older multi-family walk up style buildings to the south and a community/office building to the north. Past Use of the Site: The Site was developed prior to 1887 with a Brooklyn Union Gas Gasometer (gas holder) in the northern third of the property and multiple residential homes and stores on the southern portion. The holder was operated solely as a gas distribution holder; no gas production facilities were present. By 1935, the holder was removed and the northern section was vacant until approximately 1941 when it was a parking lot and then a furniture/framing company. From 1974 to 2008, East Coast Industrial Uniform, an industrial dry-cleaning operation, was operating on the site. There are several concrete lined trenches

cut through the southeast end of the building which were likely used to contain wash water from numerous washing machines prior to discharge through the small aboveground oil water separator located in the southeast corner and finally to public sewer. An abandoned-in-place underground storage tank is located near the roll-up gate entrance to the building. The underground storage tank (UST) is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest. "

Env Problem: "Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m³ and TCE was detected at 687 ug/m³. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Remediation at the site has been completed. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

Site Code: 458025
Site Description: "Location: The Former East Coast Industrial Uniform Site is located in the City of New York, Borough of Brooklyn (Kings County) at 35, 43 and 49 (formerly 39) Skillman Street. It is currently identified as Section 7, Block 1886, Lots 10, 11 and 12 on the NYC tax map. Site Features: The site was vacant and was formerly developed with three attached buildings and a parking area. The site is now occupied by three new 6-story residential apartment buildings. Each building consists of 16 apartments with a mix of 3, 4 and 5 bedroom units to better serve the needs of the community. Each building features a full basement level with utility rooms, residential living space, and

8-9 parking spaces and outdoor recreation areas on the roof. Current Zoning/Uses: The site has historically been zoned for light industrial/commercial applications. In 2001, the area was rezoned as a Special Mixed Use district (MX4) which added an R-6A residential zoning to the area. The surrounding land use includes 3 new multi-family residential buildings to the east, four new multi-family residential buildings and a vacant commercial building to the west, older multi-family walk up style buildings to the south and a community/office building to the north. Past Use of the Site: The Site was developed prior to 1887 with a Brooklyn Union Gas Gasometer (gas holder) in the northern third of the property and multiple residential homes and stores on the southern portion. The holder was operated solely as a gas distribution holder; no gas production facilities were present. By 1935, the holder was removed and the northern section was vacant until approximately 1941 when it was a parking lot and then a furniture/framing company. From 1974 to 2008, East Coast Industrial Uniform, an industrial dry-cleaning operation, was operating on the site. There are several concrete lined trenches cut through the southeast end of the building which were likely used to contain wash water from numerous washing machines prior to discharge through the small aboveground oil water separator located in the southeast corner and finally to public sewer. An abandoned-in-place underground storage tank is located near the roll-up gate entrance to the building. The underground storage tank (UST) is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest. "

Env Problem:

"Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m³ and TCE was detected at 687 ug/m³. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Remediation at the site has been completed. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and

HW Code: C224156
Control Code: 13
Control Type: ENG
Date Record Added: 12/04/2013
Date Rec Updated: 12/31/2021
Updated By: SNBOLLER
Site Description: "Location: The Former East Coast Industrial Uniform Site is located in the City of New York, Borough of Brooklyn (Kings County) at 35, 43 and 49 (formerly 39) Skillman Street. It is currently identified as Section 7, Block 1886, Lots 10, 11 and 12 on the NYC tax map. Site Features: The site was vacant and was formerly developed with three attached buildings and a parking area. The site is now occupied by three new 6-story residential apartment buildings. Each building consists of 16 apartments with a mix of 3, 4 and 5 bedroom units to better serve the needs of the community. Each building features a full basement level with utility rooms, residential living space, and 8-9 parking spaces and outdoor recreation areas on the roof. Current Zoning/Uses: The site has historically been zoned for light industrial/commercial applications. In 2001, the area was rezoned as a Special Mixed Use district (MX4) which added an R-6A residential zoning to the area. The surrounding land use includes 3 new multi-family residential buildings to the east, four new multi-family residential buildings and a vacant commercial building to the west, older multi-family walk up style buildings to the south and a community/office building to the north. Past Use of the Site: The Site was developed prior to 1887 with a Brooklyn Union Gas Gasometer (gas holder) in the northern third of the property and multiple residential homes and stores on the southern portion. The holder was operated solely as a gas distribution holder; no gas production facilities were present. By 1935, the holder was removed and the northern section was vacant until approximately 1941 when it was a parking lot and then a furniture/framing company. From 1974 to 2008, East Coast Industrial Uniform, an industrial dry-cleaning operation, was operating on the site. There are several concrete lined trenches cut through the southeast end of the building which were likely used to contain wash water from numerous washing machines prior to discharge through the small aboveground oil water separator located in the southeast corner and finally to public sewer. An abandoned-in-place underground storage tank is located near the roll-up gate entrance to the building. The underground storage tank (UST) is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest. "

Env Problem: "Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in

groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m3 and TCE was detected at 687 ug/m3. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Remediation at the site has been completed. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ 31-JUL-2001 14:40 HRS. REPORTS: WHILE P.SUDOL WAS ON LOCATION FOR INSPECTION WITH THE DEC HE FOUND: APPROX. 4 OZ OF TRANS FDR FLUID ON TO A SUPPORT BEAM THEN ON TO BLUE STONE IN CIRCULATION PLANT # C2 FROM OIL PUMP SEAL. EQUIPMENT IS DRIPPING APPROX. 1 DROP EVERY 10 MINUTES. SPILL IS NOT CONTAINED. NO SEWERS OR WATER WAYS AFFECTED. CLEANUP PENDING REPAIR. CONTAINER PLACED UNDER LEAK FILLED WITH OIL ABSORBENT UPDATE 31-JUL-2001 17:20 HRS. ASPER AN E-MAIL FROM M.ROSA : 13:48 hours During a DEC inspection of the Gowanus Substation, it revealed that within Cooling Plant C2, there was a minor oil leak from the Oil Motor / Pump #01 seals. Apparently through vibration of the motor the catch pan shifted slightly causing a leak of approximately four ounces of oil onto the bluestone. The pan was immediately reposition and consultations were in progress due to a previous E2MIS work order on that piece of equipment. 16:45 hours. Two catch pans placed beneath the Oil Motor/ Pump # 01. The support structure of the pump has been cleaned and the oily bluestone removed. A 5 gallon pail was created and labeled oily debris from CP 02. The drum identification number and the proper labels need to be applied. UPDATE 8/23/04 W.O.# 0000122854 has been complete by Michael Garcia#14564 and Nesbilt Santo # 14864. Pump needs to be repaired. Another Incident Report 140211 will capture the repairs on pump. This incident # will be closed because on inspection found two incidents for the same problem."
Remarks: "4 oz spilled - clean up pending crew arrival spilled to bluestone & a support beam - no smoke/fire/private property con ed none at this time - - - -this is a NON pcb spill"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT 7/19/95: Al Fillipi - due to heavy rainfall could not handle water and overflowed newly installed lip around barge. They are going to raise the lip from 3 to 6 . All oil contained within permanent boom. Used sorbent pads to try to remove sheen. MEG called in to do clean up. No PCB analysis performed. Transformer is non-PCB. Mike O'Donnell (Con Ed) - source of oil was residual dripping from dressing coupling on #3 and 4 units. 10/10/95: This is additional information about material spilled from the translation of the old spill file: OIL SHEEN."
Remarks: "SHEEN FOUND AROUND 2 BARGES AFTER RAIN - CONTAINED BY BOOMS."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 25417
DEC Memo: "3/4/2003: CLOSED DUE TO LACK OF ANY RECENT INFO - DOES NOT MEET ANY CLEANUP REQUIREMENTS. 5/18/06: Case reopened because high naphthalene found in downgradient MW8 on Verizon property. Assessment required letter sent, due back 7/18/06. PBS # 2-603597 5/31/06: Spoke to Commodore Manufacturing. He will send documents regarding legal closure of tanks three years ago. 6/5/06: Received letter with documentation that Action Environmental closed in place a 35,000 gallon heating oil tank that was previously abandoned in place. The tank was noted to have been properly abandoned in the late 1940's. 8/11/06: Spoke with Kevin O'Connor. Two 35,000 gallon USTs were abandoned in place. A third tank was found to be formerly abandoned in place with sand. All three tanks were in parrallel. Soil testing may have been completed by a different company. Contact owner for additional information. Called Abraham Damast (718-788-2600), he was not in the office. 8/21/06: Called Abraham Damast, the line was busy. 8/25/06: Left message with Abraham Damast's secretary to see if he has additional information regarding the tank removal/abandonment. 9/27/06: Sent letter to Abraham Damast requiring sampling results from the abandonment which occurred in September 2004. 10/11/06: Downgradient Verizon site Spill 9108899, located directly downgradient of Commodore manufacturing, was closed, although their upgradient well MW8 still shows high naphthalene contamination from an unknown upgradient source. Include Verizon's well MW8 in possible future sampling of this plume. 9/16/14 - Raphael Ketani. The spill was opened on 2/6/90 as a result of an integrity test failure for a two tank system. According to the spill report, these were two 550 gal. gasoline USTs. However, there is no documentation indicating that gasoline USTs were ever at the site. The site is owned by 4312 2nd Avenue Realty, LLC (zip code for site address is 11232). The contact is Abraham Damast at 19 Mitchell Drive, Kings Point, NY, 11024. The township for his home is North Hempstead. The general area of Nassau County is Great Neck. The block and lot for the site are 726 and 1. The information above came from a deed dated 12/31/2000 which was found in ACRIS. The PBS registration is #2-603597. It shows three 35,000 gal. USTs. Two had #2 heating oil and one had #6 heating oil. The tanks were closed in place. An investigation and tank closure report was sent on 5/12/99 by Action Remediation Co. It was produced for Action by Advanced Cleanup Technologies and is dated 5/11/99. According to the report, 5 soil borings were performed. There were no PID detections. These borings were turned into wells TW-01 to TW-05. Groundwater samples were collected and analyzed (received by the lab on 4/19/99). All of the results were non-detect. The tanks were cleaned out and abandoned in place. 9/19/14 - Raphael Ketani. I presented the case for closure to Hassan Hussein, EE III and head of Unit C Remediation. He approved the closure. The closure was based on the lack of evidence of soil and groundwater

COMMODORE MANUFACTURING (Continued)

S106703419

contamination as the PID results were all 0 ppm and the groundwater results were all non-detect for VOCs and SVOCs. The closure was also based upon the letter from Action Remediation Co. indicating that they had abandoned the tanks by cleaning out the tanks and filling them with sand. Considering the information in the case file, it was determined that the spill was not a threat to the public or the environment. The spill case was closed today. "

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 10/10/95: This is additional information about material spilled from the translation of the old spill file: YARDS. Transferred from Tang. 09/23/2003 Transferred from Tibbe to Sun. 10/03/2003- Sun- File Review by Sun: -Quarterly Report Jan 2003 thru March 2003 by EnviroTrac (Jeff Bohlen, 631-471-1500) -On Jan 28, 2003, Verizon's consultant performed the injection of oxygen releasing material (ORM) into the groundwater at the site. A total of 440 pounds of calcium peroxide (IXPER 75C) was injected through a network of 10 boring locations. At each boring, Geoprobe equipment was utilized to disperse approximately 40 to 50 pounds of ORM and a half of a pound of food grade sugar across the uppermost 12-feet of saturated soils. The results of this first quarter groundwater monitoring event indicate a decline in total dissolved BTEX/MTBE concentrations in Monitoring wells MW-2, MW-3, MW-5, MW-8 and MW-B. But, it show a significant increase in total BTEX & total VOCs in MW-4, and did not produce the desired downward trend of dissolved VOCs in groundwater. -Quarterly Report April 2003 thru June 2003 by EnviroTRac Ltd (Jeff Bohlen, 631-471-1500)- The results of this quarter indicate a decline in total dissolved BTEX/MTBE concentrations in Monitoring Wells MW-1, MW-3, MW-5, MW-7 and MW-B. But, it shows a significant increase in total dissolved BTEX and total VOCs in MW-2, MW-4 and MW-8. The bio remediation using ORM injection into the groundwater is not producing the intended results. DEC intends to ask Verizon to investigate the soil around the 2x2000 gallon gasoline USTs (closed-in-place), and to confirm the groundwater flow direction. 10/07/2003- Sun & Vought visited the Verizon's site and met with John Quatrale of Verizon and Jeff Bohlen of Envirotrac. Based on our discussion, Verizon/Envirotrac will confirm the ground water flow direction in the next quarterly report. 10/17/2003-Sun sent an e-mail to John Quatrale of Verizon (516-292-8166), requesting the following actions be taken: 1) Correct the North arrow direction on Figure 1 of the Quarterly Report, 2) Re-survey the wells and determine the groundwater flow direction, 3) Provide the most recent quarterly report-covering July 2003 through September 2003. 10/30/2003-Sun- File Review by Sun: -Updated Report-July 2003 through September 2003: The results of the third quarter 2003 groundwater monitoring event indicated a decline in total dissolved VOC concentrations in MW-2 and MW-4, however, the total dissolved VOC concentrations increased in MW-5, MW-8, and MW-B. The hottest spot is on MW-4, which has 28,111 ppb of BTEX (max),and 30,411 ppb of total VOCs(max). MW-2 has the highest MTBE of 1,300 ppb (max). Per the quarterly report, Verizon may elec to remove the active 4000-gallon underground storage tank (UST) containing gasoline along with the dispenser island and associated piping during the next reporting period. 12/31/2004-File Update by Sun: On April 8th and 9th, 2004, one 4000-gallon gasoline underground storage tank (UST) and the associated dispenser island and piping at the subject site were removed. A total of six post-excavation soil samples were collected. Five of the soil samples were collected from the UST excavation. The soil samples were collected at each sidewall of the UST excavation in addition to the bottom of the UST excavation. On additional soil sample was collected from the area of the dispenser island. Post-excavation soil samples

collected from the sidewalls and bottom of the UST excavation and from the area of the dispenser island were below NYSDEC TAGM 4046 Recommended Soil Cleanup Objectives for the VOCs analyzed. 1/3/2005-File Update by Sun: On 12/7/04, the Department approves the remedial system proposed by EnviroTrac dated 11/1/04 for the subject site; specifically, the use of Soil Vapor Extraction/Air Sparging (SVE/AS) remedial system for in-situ remediation of the petroleum contaminated subsurface soil as well as petroleum compounds dissolved in groundwater. 1/5/06: Case reassigned to Andersen. 1/11/06: Reviewed the quarterly report dated 1/10/06. SVE/AS in operation. Samples taken on 9/28/05. Max BTEX 164.2 ppb (MW-4). Max MTBE 178 ppb (MW2). 1/19/06: Reviewed the fourth quarterly 2005 update report. BTEX and MTBE ND in all wells sampled. Approved shutoff of the AS/SVE system. 4/27/06: Meeting with Verizon, NYSDEC, and EnviroTrac. March gw monitoring showed rebounding in one well. Awaiting formal copy of monitoring report. 5/11/06: Received first quarterly 2006. SVE/AS was shut off on 1/19/06. BTEX and MTBE ND in all wells except MWB. An off site source is suspected in MWB. Concentrations in MWB: BTEX 33.6ppb, MTBE ND, Naphthalene 1,770 ppb. The naphthalene concentration in MWB was ND for the last two quarters. Wait another quarter to confirm the naphthalene concentration in MWB. Then request off site well to confirm an off-site source. Reopened spill 8910578, failed tank tightness test of fuel oil USTs on upgradient property which was never investigated. 10/11/06: Received april - june 2006 monitoring report. Wells sampled on 6/15/06. Max BTEX 19 ppb (MWB), max MTBE 47 ppb (MW-2). TVOC 1,093 ppb (MWB). High naphthalene in MWB may be result of an off-site source. Spill 8910578, directly upgradient, is currently being investigated. The Department approved that groundwater sampling cease while the Department investigates spill 8910578. 5/24/07: NFA issued."

Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

H99 - Tank Leak Detection - Other
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
G03 - Tank Secondary Containment - Vault (w/o access)
I00 - Overfill - None
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
E02 - Piping Secondary Containment - Vault (with Access)
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None

Tank Location: Aboveground in subterranean vault with access for inspections.....
Tank in subterranean vault but accessible for inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 12/01/1926
Capacity Gallons: 5000
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 02/20/2017
Register: True
Modified By: DAFRANCI

adjacent to couple of abandoned railroad track line is impacted by the oil. Oil spreaded over one of the track of about 10 ft in length. Petroleum Tank Cleaners(PTC) has been called in to do the clean up. NYC Transit, Office of System Safety(Josephina Volyn/Richel Kron, 718-243-4581, Fax: 718-243-4309) has been notified of their property impact. 04/06/05-SR// PTC excavated the rail track, took sample, backfill soon with supervision from NYC Transit. Open lot between building and the track has been field screened. Contamination found. Property owner Mr. Merhige was contacted for revised work plan including tank vault and open lot. 9/8/05-Vought-File review as per DEC Austin due to inquiry by Rachel Kron (NYC Transit 646-252-5773). Spill out of vent pipe and also into tank room. Letter from DEC Rahman to Commercial Realty Co (11 East 26th Street, 11th Floor attn: Richard Merhige)-3/23/05. Letter sent requiring: 1)excavation of all oil impacted soil and debris including railroad track area 2)removal of oil from secondary containment vault 3)submission of soil sampling results. Scope of Work from Petroleum Tank Cleaners PTC(Anthony Lara 718-624-4842)-4/5/05. Scope of work includes: 1)product removal from vaults. Soil analyticals from PTC-5/24/05. Water analyticals show no TAGM Soil Cleanup Objective exceedences except for minor PAH's attributable to fill material. Letter from PTC (Lara) to DEC Rahman-6/27/05. PTC has removed all contaminated soil and debris from the vault, and as you agreed what was acceptable PTC has addressed any remaining contamination via the application of Biosolve bioremediation accelerant to the soil beneath the existing vault floor . PTC plans to begin installing a new concrete floor as early as 7/6/05. 9/8/05-Vought-Called Rachel (646-252-5773) and left message with outstanding requirements: 1)endpoint soil samples from track excavation 2)site plan and locations of endpoint sampling. Vought called Commercial Realty (Richard Merhige 212-947-7500) and he tried to call Rachel who has not returned call. PTC still cleaning out second tank room. PTC collected soil samples from outside and two 20' foot containers were generated from soil excavation. Jerry Sobel will be contact for next seven weeks as Richard will be going on vacation. Vought left message for PTC to return call with status of soil excavation and endpoint sampling. 10.19.05 Sharif- I spoke with Anthony of PTC, 646-772-7180 who informed me they made formal request to NYCT's property to do geoprobe investigation. NYCT holding them regarding some insurance coverage issues which will possibly be simplified as they are working on it. NYCT is supposed to getback to PTC by this week. I'll call NYCT next week about their approval. 12/15/05 Sun reassigned from Rahman to Foley. 1/3/2005 - Feng - File reviewed by Feng and summarized: 1) some samples were collected the boiler room with site plan provided, but did not indicated out whether soil or groundwater samples. High SVOCs. 2) Track area impacted, and removed the contaminated soil. DEC has been requested 1)endpoint soil samples from track excavation 2)site plan and locations of endpoint sampling. Nono were submitted on file. 3) DEC Rahman has assisted PTC to access the NYCT property and do the sampling. Wait for sampling result report. 05/09/06 - spoke to Mr. Bob Lamirata of PTC, 718-624-2185. He said he will take care of disposing the contaminated soil pile at the site in a few days. I will find out more of the subsurface contamination. - KST 6/15/06 - Bob Lamirata of PTC called and advised that contaminated soil pile has been removed. Will fax end-point sampling results. - KST 6/26/06 - PTC sent in the report which only has the lab results, no write-up. The results look clean. Called Bob

Remarks: Lamirta and told him that DEC needs a report summarizing the contamination and the actions taken by the RP OR PTC in cleaning up the spill. Liz Deluca called and will be at the site on June 27, assessing the spill. She will call me to report if additional work is needed. - KST 11/9/06 - NYCT has not call to request additional cleanup work. Spill closed. - KST"

Site Type: Utility (Other than Municipal)

Tank Info:

Tank Number: 001
Tank Id: 231780
Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 01/01/1975
Capacity Gallons: 3000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 10/15/2013
Register: True
Modified By: NRLOMBAR

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Site is a 2 Family house in Brooklyn. DEC Sigona sent notice regarding the tank test failure on May 16, 2003. 4/23/2004 Sangesland -another TTF letter sent today 4/30/2004 Sangesland spoke to property owner Margie Alimonda. She said Bayside was hired to close out the buried 1500 gal tank and install a 550 in her garage. Sangesland spoke to Fred Caputo at Bayside (718-946-4000). He said the whole job was contracted out to AL Eastmond. Eastmond was to close out the tank, install the new tank and take care of the PBS paperwork.

S104619550

11/8/05 Spoke to Margie Alimonda she said Bayside filled in the below ground tank and installed several above ground tanks. She said Bayside was to send in the paperwork. Spoke with a Margie at Bayside now Petco she had no record of work. Gave me name of Phil Tanella their installer in the area of the spill. I called Tanella and left a message. J Lister 11/9/05 Spoke to employee of AI Eastmond (718-378-7000)who left a message for Renee. JL Open Issues: 1) Review of DEC database shows no PBS was ever filed (for a 1500 gal tank). - Question if this really was a 1500 gal tank on a 2 Family house in Brooklyn. 2) Apparently no soil boring samples were taken. Tank was just closed out and left. 09/6/06- Zhune sent TTF letter to: Fred Alimonda 357 40th Street Brooklyn, NY 11233 Margie Alimonda called to say that she will fax a copy of letter from Eastmond & Sons, Fuel Oil Tank Cleaning. Zhune got the fax but it was not visible. She will send it by mail. Zhune. Margie sent a visible job ticket from A.L.Eastmond. Eastmond close the underground tank. They filled it with sand. They installed 2(275) gallons AST in the basement. Petro tested the tank and failed. 09/02/09-Randy Austin and Zhune review the case and found no evidence that will indicate of petroleum release. Other than that tank test failure. Since tank fail test are no presumption not prove of spill. Therefore spil has been closed. "TANK TEST FAILURE ON 1,500 GALLON UST"

Spiller Name: Not reported
Spiller Company: Not reported
Spiller Address: Not reported
Spiller Company: 001
Contact Name: MIKE SHERWOOD
DEC Memo: "03/12/07-Hiralkumar Patel. spoke with Mr. Sharma. they were hired by contractor who is working at school construction site. site owned by NYC school authority. during construction activities, they hit underground tank and punched hole in it. as per Mr. Sharma, tank was about 1000 gal capacity and had about 800 gal diesel in it. spill started about 7:30 am and Mr. Sharma reached with crew for cleanup about 10 am. they have removed underground diesel tank and removed associated contaminated soil. they dug about two ft below tank invert. excavation was backfilled with five endpoint sample taken. asked Mr. Sharma to submit site plan with sampling locations, disposal manifests and sample analyticals. 03/27/07-Hiralkumar Patel. received call from Amy Fonpana (845-492-3178). they are preparing closure report and will send by 04/15/07. 04/24/07-Hiralkumar Patel. spoke with Ms. Fonpana. they are still waiting for some disposal manifests and other documents. she will send report soon. 06/19/07-Hiralkumar Patel. left message for Ms. Fonpana. 06/26/07-Hiralkumar Patel. received message from Ms. Fonpana. they are still working on-site and waiting for some documents. will send report once they get all documents. 06/27/07-Hiralkumar Patel. Mr. Sharma reported another spill at same site. (new spill #: 0703584). they did borings on property along 34th street and found soil and groundwater contamination. Mr. Sharma mentioned that site had multiple tanks. asked Mr. Sharma to send all analytical data (for all samples done on-site till date) and detailed scaled site map with all sampling locations, tank locations and associated lines. also asked Mr. Sharma to send copy of phase I and phase II reports. 06/28/07-Hiralkumar Patel. meet Bob Kanaparathi and Drew Pardus from NYC SCA and Michael Sherwood from Shaw environmental. Mr. Sherwood mentioned that school construction site is combination of two sites known as large parcel and small parcel. received phase I and Phase II reports from Mr. Sherwood. abstract of Phase I: - the site is located in mixed commercial/residential area on the corner of 4th ave and 35th street - previous occupants of the site included private residences, a stationer, tool manufacturing facility, a garage and candy manufacturing. - large parcel of site had 5000 gal tank and history of spills (9210902, 9605304, 9211737) - site is approx. 20 ft above mean sea level - BASED ON phase II investigations conducted by Weston for the McDonalds restaurant site located at 968 4th ave, the depth of groundwater is approx. 37 ft bg and groundwater flow direction is to the northeast. <----- - major spill sites in neighbourhood: 1. Greenwood Cemetery (Spill #: 8710384, 8710694, 8902953, 9413808). all spill closed 2. Jackie Gleason Bus Depot (Spill #: 9106350, 9507015, 9705882, 9803068, 9902851, 9908589, 0211807, 0402205, 0413523, 0702197) 3. 971-975 4th ave (spill #: 9207015). groundwater contamination reported <----- 4. Mobile service station, 89-14 4th ave (Spill #: 0430002, 0330037, 8302631) reported groundwater contamination <----- 5. 987 4th AVE (spill #: 8706481). found groundwater contamination. abstract of Phase II report: - proposed design for school includes construction to a depth of approx. 18 ft bg - depth of groundwater was found to range from between 14 and 24 ft bg - total of 13 soil samples (LPB-1 to LPB-8, SPB-2,5,6,7 and 8) and 7 groundwater samples (LPB-1W, 5W and 8W,

1001113387

SPB-5,6,7 and 8) were collected for analysis - found heavy Trichlorethene (160,000 ppb) contamination in groundwater sample SPB-5 <----- - as found heavy TCE contamination in groundwater sample, did supplemental phase II - collected two soil sample from two borings (close to previous boring location SPB-5) and three groundwater sample from same two borings on-site and four groundwater sample from two off-site borings - also took 6 sub-slab soil-gas samples, because of heavy TCE contamination - found no contamination in any soil, groundwater or soil-gas samples during supplemental phase II investigation Michael Sherwood Shaw environmental PH. (914) 633-9324 (O) (516) 650-5290 (C) Fax (845) 492-3101 email: michael.sherwood@shawgrp.com Bob Kanaparthi NYC SCA Ph. (718) 472-8620 Drew Pardus NYC SCA Ph. (718) 752-5036 (O) (646) 577-8280 (C) during meeting Mr. Kanaparthi mentioned following: - entire site has been excavated to depth of 16 ft and groundwater is about two more feet deeper than existing excavation bottom. - during excavation, they removed total of five USTs (one 2000 gal fuel oil/diesel tank, one 1000 gal sugary mix tank, one 5000 gal tank, one 100 gal tank and one 1000 gal tank). - found contaminated soil around some tanks and has been removed - endpoint samples taken from contaminated zones - currently footing work for proposed building is going on at site - during construction found sheen on groundwater and gasoline odor - took groundwater samples from two different locations - found minor benzene (58 ppb) contamination in groundwater sample GW-1, along 35th street <---- - there will be two elevator pits, partially merged in groundwater - to work on elevator pit, they need to dewater those areas - due to high concentration of TCE in groundwater sample during first set of sampling, they will put vapor barrier and active SSDS under BASEMENT floor asked Mr. Pardus to do following: - installation of atleast three monitoring wells to define site specific groundwater flow direction and sampling soil and groundwater during this monitoring well installation. - samples must be analyzed for STARS 8260 & 8270 methods & report must include chlorinated compounds - no dewatering events until site-specific groundwater flow direction has defined (to prevent spreading contamination if dewatering points are downgradient to source of contamination) - no concrete/foundation work till full investigation completed - installation of one more monitoring well upgradient (once groundwater flow direction defined) to check any off-site migration - submission of soft copy of vapor barrier & SSDS design - monitoring wells atleast 5 ft below groundwater table - samples from monitoring wells must be taken using Low Stress (low flow) Purging and Sampling procedure (EPA guidance)

-*. Spill #: 9207015. 971-975 4th Avenue, Brooklyn, NY. spill reported after found tank failed. PBS #: 2-297291. site had 48 tanks and were removed in 1994. from spill database, found that NYC School construction authority removed approx. 15,000 cubic yards of contaminated soil and had groundwater contaminated. case closed on 07/13/2006. WRONG REPORT UPLOADED ON E-DOCS (FIRST FILE IN LIST)
<----- *****

-*. Spill #: 8706481. 987 4th Ave, Brooklyn, NY. spill reported as gasoline tanks failed a test. PBS#: 2-157236. site had 14 tanks and were removed in 1990. from spill database, found that groundwater was

NABISCO INC (Continued)

1001113387

impacted with gasoline spill and had free product in wells installed on-site a that time. groundwater is at 38 ft bg. case still open.

-*-* 07/05/07-Hiralkumar Patel. visited site on 07/02/07 as found heavy soil and groundwater contamination in neighbour's property at 129 34th Street, which is auto repair shop. spoke with Mr. Pardus today and asked him to install additional monitoring wells along 34th street (two wells on 34th street along property line: one at each corner and one well along boundry between park and construction site). these wells are just for monitoring purpose, in case any contamination from auto repair area touches the construction site. also asked Mr. Pardus to provide site addresses for neighbours on south and east side of construction site (assumed upgradient side) 07/16/07-Hiralkumar Patel. received call from Mr. Pardus regarding sample analysis for specific chlorinated compounds. asked Mr. Pardus to run all groundwater samples for compound that was found high (PERC) in previous investigation. 07/23/07-Hiralkumar Patel. received message from Mr. Pardus asking for meeting. spoke with Mr. Pardus and asked him to submit data for review prior to any meeting. 07/24/07-Hiralkumar Patel. received sample analyticals and site map with monitoring well locations, from Mr. Pardus. they installed four wells on site and one on sidewalk along 35th street. found very minor contamination. from monitoring wells, they found groundwater flow in south direction (from site which has heavy groundwater contamination: 129 34th street). monitoring well #1 installed close to area where they found high PERC in groundwater. Mr. Pardus asked for dewatering of site for construction activities. mentioned to Mr. Pardus that as no contamination found in any samples, they can do dewatering but they need permits from city agencies for that. asked Mr. Pardus to install one well in corner of property along park along 34th street (as found heavy soil and groundwater contamination at site 129 34th street). also asked him to monitore well # 4 until it knocked down. asked Mr. Pardus to submit entire report with boring logs, water depths etc. 07/25/07-Hiralkumar Patel. spoke with Mr. Pardus. told him that they can start dewatering from site (based on analytical data). also asked Mr. Pardus to install a permanent monitoring well on sidewalk along 34th street (close to property line between subject site and park) as subject site is exactly downgradient from contaminated site at 129 34th street. this well will be used as monitoring point to see any oil from 129 34th street site hit construction site or not. Mr. Pardus mentioned that they will install vapor barrier and sub-slab system. Mr. Pardus will schedule installation of one well on sidewalk along 34th street. 03/20/08-Hiralkumar Patel. received tank closure report from Shaw environmental. abstract: - site groundwater was encountered between 16 to 18 ft bg - installed four wells (MW-1, MW-2, MW-4 and MW-5) - no tidal influence noticed in wells MW-1, MW-2 and MW-5, via automatic data logger - groundwater level data from MW-4 shows rise in the water level; cause of this water level rise is unknown (no precepitation or on-site dewatering during or before water level measurement) - direction of groundwater flow from north toward the south and away from the Upper New York Bay; this is opposite of the anticipated direction of groundwater flow based upon the surface topography of the area and the proximity to the Upper New York Bay (0.3 miles northwest) - removed four regulated (petroleum) USTs and one non-regulated (sugar) UST in Mar.-Apr. 2007 - four petroleum tanks removed: one 2000 gal, one 1000 gal, one 5000 gal and one 100

1001113387

gal - one 1000 gal sugar tank removed - 2000 gal tank was punctured during excavation and then spill reported - 2000 gal UST found to be in fairly good condition with no significant evidence of corrosion - final dimensions of excavation for 2000 gal UST measured approx. 15 ft wide by 20 ft long by 20 ft deep; after collection of endpoint samples, excavation backfilled - 100 gal UST was discovered immediately beneath the concrete slab of the former site building - 100 gal UST was found to be old and rusted with large openings - following removal of 100 gal UST, no evidence of release was observed; no impacted material was excavated; one bottom endpoint sample collected after tank removal - 5000 gal UST was abandoned-in-place with concrete - 5000 gal UST found to be slightly corroded but no holes were observed - final dimensions of excavation for 5000 gal UST measured approx. 30 ft wide by 50 ft long by 35 ft deep; after collection of endpoint sidewall samples, excavation backfilled - no endpoint bottom samples collected after 5000 gal tank removal <----- - 1000 gal UST was discovered about 5 ft below and found to be rusted with a large hole where it appears that the weld separated <----- - final dimensions of excavation for 1000 gal UST measured approx. 10 ft wide by 15 ft long by 15 ft deep; after collection of endpoint samples, excavation backfilled - groundwater samples collected from one geoprobe GW-1 and four monitoring wells (MW-1, MW-2, MW-4 and MW-5) - found some SVOC contamination in endpoint soil samples and some VOC contamination in groundwater samples - school design includes a vapor barrier and an active SSDS 06/03/08-Hiralkumar Patel. spoke with Mr. Pardus. he doesn't know about construction status. asked him to submit soft copy of vapor barrier and SSDS design for review by NYS DOH, prior to installation of such. 06/06/08-Hiralkumar Patel. during site visit in neighbourhood, pass through subject site and found few floors already developed at the site. no information available whether vapor barrier and active SSDS were installed or not. 06/17/08-Hiralkumar Patel. spoke with Mr. Sherwood. asked him about endpoint bottom sample after removal of 5000 gal tank and design specification of vapor barrier and SSDS. left message for Mr. Pardus for following: - submission of design specs of vapor barrier and SSDS - confirmation about installation of vapor barrier and SSDS - clarification for not taking endpoint bottom sample after 5000 gal tank removed 06/23/08-Hiralkumar Patel. left message for Mr. Pardus. 07/09/08-Hiralkumar Patel. received email from Mr. Sherwood with vapor barrier and SSDS design and clarification about not taking endpoint bottom samples after 5000 gal tank removal. as per Mr. Sherwood, Shaw environmental was not on site to witness the removal of the 5,000 gal UST as this work was overseen by GZA Environmental, the consultant to the general contractor. as per GZA, they have indicated that they initially removed the UST but did not collect confirmatory soil samples because they felt that there were some minor impacted soils that needed to be excavated and knew that the Contractor was coming back to this area to excavate for the building foundation. when contractor returned to the area to excavate for the building foundation, they indicated that they excavated contaminated soils down to the watertable at approximately 18 feet below grade, and therefore could not collect bottom soil samples. in June 2007, Shaw conducted a soil and groundwater investigation at the site. during that investigation, collected two water samples in the southwest corner of the building foundation excavation, immediately below the former location of the 5,000 gallon UST. one sample was

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 1:45 Spoke to PO Calvin Somers at 354-4357. He indicated that the USCG has responded to the site, and that there is an unrecoverable sheen in the Gravesend Anchorage. It is not impacting land and is not expected to. At this point they are unaware if the sheen is coming from a 65 foot self-propelled barge, called the Jet Trader, or from a 500 foot tanker called the Jag Pavitrie which is carrying an unknown amount of light oil-probably diesel. The CG has required both vessels to hire contractors to set up boom to contain any spilled oil and to determine the source. If the vessels refuse or are unable, the USCG will hire contractors. The wind is currently 15 knots. DEC is to call CG later for additional information. 10/31/03 TJD Old surface water spill. No further action possible. Spill closed."

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 3/11/03 - SAMUEL- File available in active unassigned spill files. 04/12/04 TRANSFERRD FROM ODOWD TO ROMMEL. 1/10/2006 - Haggerty - Leigh Gutterman from NYC School Construction (718-472-8502) is locating necessary reports. She is requesting another week to find them 7/13/2006 - Haggerty - Leigh Gutterman from NYC School Construction mailed closure report on June 7, 2006. The report essentially is the original from 13 years ago. NYC School Construction included new groundwater samples (March 2006) to hopefully provide proof the site has been remediated. In 1993, 44 UST's were removed along with 15,000 cubic yards of petroleum contaminated soil which were properly disposed of. Due to the N,R subway running underneath 4th Avenue to the west of the property, excavation was restricted. All accessible soil was excavated. Post-excavation soil samples contain VOC's and SVOC's above TAGM mostly in the area adjacent to 4th Avenue. However, the time passed since the soil samples were taken as well as the fact that the recent groundwater samples are below TAGM, DEC has decided to close the spill. "

DEC Region: 2
DER Facility ID: 160128
DEC Memo: "On June 29, 2000, DEC (Sigona) along with Handex (Hoashi, Tonn, and DeVoe) conducted a site visit at Former Mobil S/S, 987 4th Avenue, Brooklyn, which is currently occupied by a Taco Bell. According to Handex (Tonn) Mobil delivered a shipment of gasoline to the USTs which were partially decommissioned in 1988. Fenely & Nicol performed an investigation in 1988, and prepared a report in December 1989. Fenely and Nicol recovered approximately 250 gallons using a pump and treatment system. GTI became involved in 1992, and installed a groundwater sparging system to treat the remaining dissolved phase at the site. There were however, sporadic signs of free product over the years. There were at least 10-12 wells at the site in the previous investigations. Currently, there are only four groundwater monitoring wells, and four sparging wells. There is also a vapor extraction system at the site. A Stipulation Agreement was issued by DEC on July 7, 1995. The site is directly adjacent to a Subway which runs underneath 4th Avenue. There was no indications from Handex that the subway lines have ever been impacted. The vapor from the SVES was shut down in 1998, and was treated with carbon. DEC (O'Dowd) requested a test of the vapor from the sparge wells. In September 1999, Handex found 11,000 ppb total BTEX in SP-2 and 2,900 ppb BTEX in SP-3 and nd in SP1 and SP4. MTBE was relatively low. In November 1999, Handex found 3 feet of floating product in MW21 and has monitored on semi-annual basis only. The wells were last sampled in June 2000. Since November 1999 performed 3 vacuum truck visits and recovered free product, gaged for free product before and after each visit. Handex is not sure what the source of the free product in Well No. 21. Handex will continue to submit a semi-annual report which will be due in August 2000. Handex plans to conduct a soil investigation in Sept 2000. Handex will send the plan to DEC for review and approval. Meanwhile, the system will be shut down until Handex can determine the proximity of the contamination. The depth of groundwater is 38 feet below grade. 4/27/10 - M. MacCabe - Reinstallation of AS/SVE system has been completed except for connection to the power grid. Soil and GW were sampled when AS/SVE wells were constructed. Soil and GW contamination remain on-site. 5/21/10 - no activities this month. 6/23/10 - No activities this month. 7/26/10 - The quarterly site status update report was received. 9/29/10 - The quarterly site status update report showed no changes in groundwater concentrations. 10/27/10 - Electrical work was conducted on the AS/SVE system in preparation for hook up to the power grid. 11/24/10 - The quarterly site status update report was received. Groundwater concentrations generally remain constant. 3/01/11 - The SVE component of the on-site remedial system was placed on-line on 12/29/10 then back off line on 1/10/11. The quarterly site status update report was received. Groundwater concentrations generally remain constant. 3/28/11 - The AS/SVE system is expected to go back on line in early April. 4/25/11

S106719530

- Maintenance of the AS/SVE system was conducted in late April. This included change out of the carbon filter for the SVE effluent stack. 6/28/11 - The quarterly site status update report was received. The consultant estimates that four pounds of total BTEX and 26 pounds of total volatile petroleum hydrocarbons were removed with the SVE/AS system by the end of 2010. 7/05/11 - Periodic O&M was conducted and carbon filter was changed. 8/29/11 - Periodic O&M was conducted and the carbon filter was changed in August. The August site status update report states that approximately 10.6 lbs of BTEX and 64.9 lbs of total volatile petroleum hydrocarbons have been removed from the subsurface since the rebuilt AS/SVE system went on line in December 2010. The AS/SVE system was temporarily shut down in anticipation of hurricane Irene. 9/12/11 - Periodic O&M was conducted and the carbon filter was changed in September. 12/20/11 - The quarterly report was received. The consultant states that approximately 18.72 pounds of total BTEX and approximately 93.77 pounds of total volatile petroleum hydrocarbons (TVPH) were recovered by the SVE/AS system during the entire operation period. However, the groundwater data are inconclusive. 12/27/11 - Effective January 1, 2012, the consultant working for ExxonMobil on this project will change from Kleinfelder to Groundwater and Environmental Services (GES). 2/29/12 - Staff met with representatives of ExxonMobil and GES on February 28 to discuss modifications to the AS/SVE system to improve its efficiency. Modifications of the system consist of installing a larger compressor and cycling the system to just two of the seven vapor extraction points at one time. 5/11/12 - The quarterly site status update report covering the last quarter of 2011 and the first quarter of 2012 saw received. Weekly O&M was conducted about once every two weeks. The AS and SVE points have been cycled to allow for larger flow rates in different areas. The data show continued decreases in BTEX concentration in on-site groundwater. 8/3/12 - The quarterly site status update report saw received. Periodic OM&M was conducted twice a month. Based on the sampling results from the June 15, 2012 groundwater sampling event, extraction wells SVE-3 and SVE-5 are the only wells on-site with dissolved-phase BTEX concentrations over 1,000 ug/L. Therefore, during the third quarter of 2012, sparging efforts will be focused on these areas, specifically utilizing sparge wells AS-1 & AS-2. Quarterly groundwater sampling is scheduled for September 2012. Semi-monthly O&M will continue. 10/23/12 - The quarterly site status update report saw received. Periodic OM&M was conducted twice a month. The data continue to show decreases in BTEX concentrations in groundwater. The SSUR also contained a request to pulse the AS/SVE system (alternating one month of system operation and one month of system inactivity). The request was accepted. 01/28/13 - The quarterly site status update report was received. Periodic OM&M was conducted twice a month. The SVE system is now operated with periodic pulsing. The pulsing consists of extracting from different points with others dormant and changing monthly. 4/12/13 - The quarterly site status update report was received. System O&M activities were conducted twice per month during system operation in the first quarter of 2013. The system was temporarily shut down between January 2 and February 6, 2013 as part of system pulsing activities and to observe any changes in hydrocarbon recovery. The data show continued decreases in contaminant concentrations in groundwater. The consultant states the approximately 147 lbs of hydrocarbons were recovered during this monitoring period and approximately 2,010 lbs of hydrocarbons have been recovered since

system startup in December 2010. 5/23/13 - The groundwater data presented in the May 20, 2013 Groundwater & Environmental Services (GES) quarterly report and proceeding quarterly reports have shown consistent and significant decreases in BTEX concentrations throughout the operation of the existing AS/SVE system. Current BTEX concentrations in groundwater range from non-detect to 46 ppb. SVE system effluent has shown limited recovery in the last three quarters; presumably due to the lower contaminant concentrations in groundwater. Based on the findings, discontinuation of the AS/SVE system was deemed acceptable and the spill was closed. "

 DEC Memo: "3/24/06 - Raphael Ketani. I finally made contact with someone at the super's phone at (718) 851-1328. I had been trying since yesterday. Maria, a maintenance worker there, answered and said that Ms. Ohanna wasn't in, but would be back in the afternoon. I asked her if there were any odors in the building and she said she didn't smell anything. I asked her about the oil spill and she said she wasn't aware of any oil spill or any problems with the heat. I asked Maria where I can send a letter that would reach Ms. Ohanna. She said to send it to P.O. Box 200289, Brooklyn, 11220. I told her that I will make a site visit at 2PM and that I wanted access to the basement. She said that she will let Ms. Ohanna know. I made the site visit. The odors were very strong (22 ppm) in the area of the twin 275 gallon tanks. However, there was only a slight indication that anything had ever spilled due to the absorbent sand on the floor

S107658846

below the front of the tanks. Ms. Ohana said that the service guy from Edward T. Miner Fuel Co. had stepped on a valve to one of the tanks and broke it. Later, I spoke to Mr. Chris Paulsen of the E.T. Miner Fuel Co. He said that there had been a leak from a broken cross over pipe and his crew had been over to repair it. He added that two days before, the tanks had held a large quantity of oil, but later they were dry. He suspected a 300 gal. loss. 4/24/06 - Raphael Ketani. I contacted Ms. Ohanna. I asked her what was the status of the cleanup. She said that her husband cleaned up all of the absorbent material and there is no odor. I told her I wanted to check and see for myself. She said that would be alright and she will call me with a date and time this week that would be good for her for a site visit. 5/17/06 - Raphael Ketani. I called Ms. Ohana and made an appointment for a site visit on 5/22 at 10:30AM. 5/22/06 - Raphael Ketani. I made a site visit at 10:15AM today. Ms. Ohana showed me that the oil company had come to her basement, cleaned up the spent Speedi Dri and had cemented over the floor under and around the tanks. I still detected 3900 ppb of volatiles with the PID. I told her that, to start, at least several soil borings and soil samplings have to be done around the tanks - and then maybe bioremediation. She said she has no money to do the work. I explained to her to contact either the oil company's or her own insurance to possibly get them to hire someone. She said she will try. 5/23/06 - Raphael Ketani. I received a call from Ms. Ohana. She said that she had all of the oil system piping replaced because her new oil company told her that E.T. Miner Fuel didn't do the job right and that the oil was still leaking out. She asked me to take a look at the pipes and close the case. She said she has no money to do the borings. I told her that the issue wasn't the pipes, but the estimated 300 gals. of oil that leaked into the ground below the tanks. I asked her for the phone number of E.T. Miner Fuel (718) 439-5066 and spoke to Karen at Miner Fuel. She passed me to Christopher of Miner Fuel. He explained that he tried to work with her, but she didn't want to pay for an investigation and remediation. 5/24/06 - Raphael Ketani. I called Ms. Ohana and talked to her about having one soil sample taken above the water table, instead of a series of borings and samples. I told her the sample needs to be taken to find out if her oil spill reached the water table. I gave her a list of contractors over the phone without preferring anyone. She said she was willing to do this and that she will get back to me when she finds a contractor. 5/25/06 - Raphael Ketani. I received a message from Ms. Ohana and returned her call. She said she contacted an environmental company from the list I had given her regarding doing one soil boring and taking one soil sample. She said they wanted \$3000. She said she doesn't have that kind of money and that I am driving her out of business. She claimed she may have to take out a loan and she needs the money to fix up her building. She asked that I come to her building one more time with the PID. She said I will not find any odors now as she and her husband have used ammonia and the deoderant powder and have cleaned everything up. I tried to explain to her, though she didn't seem to grasp the idea, that the issue is oil in the ground, not vapors. I told her I still needed one soil sample and to call Eastmond & Son who, I told her, were willing to give her a good price. I asked her whether she will call Eastmond, but she didn't respond to my question. She asked whether she can have her husband do the drilling and take the sample themselves to a laboratory. I told her that wouldn't be satisfactory as it has to be a sample taken with clean

S107658846

sampling equipment. I told her to call Eastmond, but she seemed to be more agitated. With that, she hung up the phone. 5/26/06 - Raphael Ketani. I sent a letter to Ms. Ohana explaining what she needs to do as the next step in the spill investigation and that the state will do the work if she doesn't and back bill her. 6/5/06 - Raphael Ketani. Received a call from Dennis Femia of NYC HPD (718) 802-4506. He asked what the situation in the building's basement was and what happened with the oil. I told him and he said Ms. Ohana takes his Section 8 clients so he will try to help her. I spoke to Mr. Mungra of Eastmond after this. He said he will do one boring tomorrow in her basement. He will go down 4 feet and take a sample. If it's clean he'll stop if it's dirty he'll try at 6 feet down and then maybe 8 feet. 7/5/06 - Raphael Ketani. I left a message for Isaac of Eastmond (718) 378-3000 to call me regarding the results of the soil boring. 7/18/06 - Raphael Ketani. I spoke to Isaac of Eastmond. He said that he has the soil sample analytical results. He said he will FAC them to me. 7/20/06 - Raphael Ketani. I tried calling Isaac, but could only leave a message on his cell phone (646) 879-6703. 7/26/06 - Raphael Ketani. I received a FAX today from Isaac of Eastmond with the analytical results for the one soil boring that was taken. There were no VOC hits, and the SVOC hits were either below TAGM or just slightly above it. Based upon this document and the documents in the record, I am closing this case. 8/17/06 - Raphael Ketani. Ms. Ohanna called up to inquire as to whether the spill case was closed. I told her it was. She asked for a DEC letter stating that the spill case is closed. I sent her one today. "

Acres: 0.230
HW Code: 224244
Record Add: 09/14/2016
Record Upd: 07/08/2020
Updated By: JCGRATHW

Site Description: "Location: The Site is located at the corner of 41st Street and 4th Avenue in the northwestern portion of Brooklyn. The site is bounded on the north by an active gasoline station, on the south by a fast food restaurant and on the east by a 3-story residential building. West of the site is 4th Avenue, the MTA Subway tunnel and the PS 136 Charles O'Dewey Elementary School. Site Features: The site is a vacant one-story building with no basement. The building covers approximately half of the 10,017 square-foot lot (0.23 acres) and was recently used as an auto repair business, a car wash and a small store. In addition to the existing building, there are tire racks, an oil change area, oil traps to a waste oil tank, car wash dry well, an office area, a car wash, hydraulic lifts, a 1,040 waste oil tank, a 1,040 gallon motor oil tank, an asphalt parking lot, and 6 potential underground storage tanks (USTs) identified on Sanborn Maps. Current Zoning/Use(s): The area is zoned C2-4. C2-4 districts serve the immediate needs of surrounding lower- and medium-density residential neighborhoods along streets that provide small local retail and service shops. Typical retail uses include neighborhood grocery stores, restaurants, beauty parlors, funeral homes and repair services. The Community Facility Use for C2-4 districts provides educational, health, recreational, religious or other essential services. Historical Use(s): The site has been an automobile garage, gas station, and car wash since 1926. From 1942-1995, three USTs were noted on Sanborn maps and two USTs (possibly removed) were identified on the 1926 Sanborn Map. Other uses are listed as an office/warehouse space for various tenants, taxi/limo parking and repair services. A Phase I Environmental Assessment was performed in July 2015 and a Phase II Environmental Assessment was performed in August 2015. Site Geology and Hydrogeology: The elevation of the property is approximately 55 feet above mean sea level. The general soil type consists of fine to coarse-grained sand and silty sand with gravel. Historic fill was encountered from grade to 15 feet below grade (deepest soil boring depth). The depth to water ranges from 18 feet (MW-3) to 44 feet (MW-1). The depth to water observed in MW-3 may be attributed to influence from the car washing operations (dry well), which may be contributing water to the aquifer. The groundwater flow direction is northwest towards the Upper Bay/Gowanus Bay three blocks away. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites."

Env Problem: "This spill was originally reported on August 9, 2015 during a Phase II Environmental Site Assessment (Phase II) through the New York City Office of Environmental Remediation Brownfield Program. The Phase II included the installation and sampling of a series of soil probes, monitoring wells and soil vapor sampling points that showed impacted soil and groundwater. Nature of Contamination: Petroleum spill with soil and groundwater impacts, and elevated tetrachloroethylene (PCE) in soil vapor. Volatile Organic Compounds (VOCs) associated with gasoline constituents and chlorinated compounds are present beneath the northern portions of the Site. VOCs indicative of petroleum were identified in both shallow and deep soil in the northwest portion of the property. This impacted soil is located at the former location of two (2) underground storage tanks (USTs) identified on the 1926

Sanborn Map. Results of the groundwater evaluation completed did not identify any exceedances of PCE in groundwater above the groundwater standard of 5 ppb. However, investigation results showed impacts of petroleum constituents and metals above their respective groundwater standards. A soil vapor evaluation was completed as part of the Phase II investigation and a supplemental soil vapor investigation did not identify any off-site impacts that would require monitoring or mitigation per the NYSDOH guidance values. Significant Threat Determination: Based on investigations performed to date, the site did not qualify for addition to the Registry of Inactive Hazardous Waste Sites. The site was referred back for investigation and remediation under Spill No. 15-06140. Site designation was changed from P to N."

DEC Memo: "9/11/15-Zhune called Carlos Quinonez from Hydro Tech (631) 462-5866. Mary said he is not available and he will call me back.
1/14/16-Vought-This spill transferred from DEC Zhune to DEC Omar as per DEC Demeo. 1/15/2016: Rashad 4013 4th Avenue has an alternate address of 401 41st Street. No additional spills found for site. 4013 4th Avenue has PBS#2-611076 for a 1,000 gallon waste/used oil AST. No documents found in D2. 1/19/2016: Rashad Sent email to Carlos: I have been reassigned 2 spills that list you as a contact, they are as follows: Spill#1305487 822 4th Ave, Brooklyn 11232, date received was 8/21/2013, Spill#1506140 4013 4th Ave, Brooklyn 11232, date received was 9/9/2015. I would appreciate any documentation/information you have on either of these sites. 1/20/2016: Rashad Carlos responded on 1/19 saying he will call me and give me an update on both sites. 3/10/2016: Rashad Sent email to Carlos: Can you please send me the Phase 2 investigation as well as any other reports you have for this site. 3/11/2016: Rashad Carlos responded on 3/10: Please see attached the report for the Phase II we performed. Any questions please let me know. thanks Phase 2 report was attached and uploaded to D2. Review of Phase 2 report: Depth to groundwater has been identified to range from 18 feet to 45 feet and the groundwater flow direction was identified to be northwest. No free product was identified on the water table. Dissolved VOCs indicative of petroleum were identified in groundwater beneath the southern and northern portions of the site at concentrations exceeding standards. Dissolved metals were also detected in groundwater. VOCs associated with gasoline constituents and chlorinated compounds are both present beneath the southern and northern portions of the site. The site is occupied by a 1 story

SUNSET CAR CARE SITE (Continued)

S118261357

building that consists of an auto repair business, car wash and a small store. The building does not have a basement. Building is heated with natural gas. A GPR, 7 soil probes, 3 groundwater monitoring wells and 4 soil vapor probes were taken. The GPR detected one anomaly in the western portion of the Site and one anomaly was detected in the northwestern portion of the site. According to historic sanborn maps there are 3 gasoline tanks located in the northwestern portion of the site. Soil probes SP-1 and SP-2 were installed in the approximate locations of 2 gasoline tanks in the northwestern portion of site. SP-3 and SP-6 were also installed near these tanks. SP-4 was installed in the approximate location of 3 gasoline tanks in the southwest portion of the site. SP-5 and SP-7 were installed in the eastern portion of the site in the vicinity of the former auto repair shop and active car wash. SP-1, SP-4, and SP-7 were installed to a depth of 12 feet. SP-2, SP-3, and SP-5 were installed to a depth of 14 feet, SP-6 was installed to depth of 16 feet. Three monitoring wells MW1-MW3 were installed in the same locations as SP-1, SP-4, and SP-7 respectively. They were installed to a depth of 55ft, 60 ft and 55 ft. None of the wells contained free product. Depth to water ranged from 18.4 feet in MW3 to 44.5ft in MW1. Soil sample SP-2 taken 4-6ft had contamination as follows: 1,2,4 Trimethylbenzene - 95ppm, 1,3,5 Trimethylbenzene - 42ppm, Ethylbenzene - 3.2ppm, Naphthalene - 19ppm, Xylene - 17ppm, At 12- 14 ft: 1,2,4 Trimethylbenzene - 180ppm, 1,3,5 Trimethylbenzene - 71ppm, Ethylbenzene - 42ppm, Naphthalene - 32ppm, n-Butylbenzene - 26ppm, n-Propylbenzene-33ppm, Xylene-180ppm, Toluene-5.90ppm. Other soil locations did not have elevated concentrations. MW1 has a groundwater elevation of 51ft, contamination found in MW1 is as follows: 1,2,4 Trimethylbenzene-1500ppb, 1,3,5 Trimethylbenzene-1300ppb, Acetone-57ppb, Benzene-1100ppb, Ethylbenzene-2700ppb, Isopropylbenzene-82ppb, Naphthalene-180ppb, xylene-13,000ppb, Toluene-1800ppb. MW2 had a groundwater elevation of 53ft, contaminates found in MW2 are as follows: 2-butanone-15ppb, acetone-32ppb, benzene-8ppb, xylene-4ppb. MW3 had a groundwater elevation of 78ft, the following contaminats were found in MW3: 1,2,4 Trimethylbenzene-510ppb, 1,3,5 Trimethylbenzene-100ppb, ethylbenzene-280ppb, isopropylbenzene-68ppb, Naphthalene-60ppb, xylene-1200ppb, toluene-96ppb. Soil Vapor samples were taken and are as follows for SV1: 1,2,4 Trimethylbenzene - 20ug/m3, 1,3 Butadiene-50, 2-butanoe-62, 2-hexanone-20, acetone-230, benzene-18, chloroform-16, cyclohexane-3, dichlorofluoromethane-7.7, ethylbenzene-14, methylene chloride-1.5, n-heptane-30, n-hexane-49, xylene-46, p-ethyltoluene-70, tetrachlorethylene-70, toluene-54. SV2 has similar readings to SV1. SV3 had tetrachloroethylene-1400 and SV4 had tetrachloroethylene-3800. According to the Phase 2: Depth of water in MW3 may be attributed to influence from the car washing operations, which may be contributing water to the aquifer Soil sample SP5 (4-6ft) - Tetrachloroethylene - 0.047ppm. MW3 has Tetrachloroethylene-4ppb. Sent email to Carlos: Thank you for the report, is this site a BCP or OER site? Also has a Remedial Action Work Plan been made yet and are there any plans for redevelopment? Brief review of the Phase 1 has subject property of one story auto laundry located in southern portion since 1926 and auto repair shop which contains the discussed tanks. 8/10/2016: Rashad Sent email to Carlos: See below questions, also is any work occurring on this site currently? Carlos responded: Yes indeed this site is an OER site. no further work has taken place to our knowledge since our submittal of

the report. We did provide the client with a cost estimate letter but he didn't want to proceed after that. I will reach out to him and will try to get more information for you. 8/12/2016: Rashad Spoke to DEC Vought and I sent email to Shaminder from OER to see if he has any further info on site. Report receipt review letter should include - delineation of soil and groundwater, development plans, RAP approval warning before redevelopment. Shaminder responded that site was previously discussed with DEC O'Connell to enter BCP, I will email Jane to discuss case. 8/22/2016: Rashad Letter was prepared and will be sent to property owner as well as emailed to Carlos of Hydrotech to address petroleum contamination. Letter was uploaded to D2. 8/25/2016: Rashad Received call from Sam, who is property owners son. He wanted to discuss contaminated soil letter that was sent to him. At this time the car wash and lube center is still in service and they are planning to close the last day of this year and either redevelop or sell property. His email is samson414@gmail.com, phone number is 917-656-4676. DEC Potentially Requires: 1-BCP or OER 2-Future use - CAMP, depth of basement piping locations, vapor barrier, ssds with doh review 3-Possible delineation across 4th Ave and its affect with groundwater 4-RAP 5-BP station spills 6-Review Phase 1 for previous source of chlorinated solvent 7-Owner: Elsaun Inc, 125 42nd Street Brooklyn NY 11232 1/17/17 - Obligado - Spill assigned to Obligado from Omar as per Austin. 1/10/18 - Obligado - Spill transferred to from Obligado to Feng. 3/16/2018 - Durnin - DER mailed a P site Notification letter to the property owner on March 16, 2018. Environmental Assessment: Volatile organic compounds (VOCs) associated with gasoline constituents: Benzene (1,100 ppb), Ethyl Benzene (2,700 ppb), o-Xylene (5,800 ppb), p & m-Xylenes (13,000 ppb), and Toluene (1,800 ppb), were found in groundwater (groundwater standard of 5 ppb). Chlorinated compound tetrachloroethylene (PCE) was detected in on-site soil vapor throughout much of the site between 66 ug/m3 and 3,800 ug/m3. (Durnin 3/29/2018) March 2017 - March 2018: After over a year nothing was done and apparently the owner was trying to sell the site. DER mailed a second P Site notification letter to the owner on March 16, 2018 but it was returned as undeliverable. It was resent to the site address (not the owner address) later in March 2016. On August 2018, DEC staff visited the site and provide copy of contact information to the receptionist. The Owner was not available at the time. On August 2019, access request letters (English and Spanish version) were resent to property owner. As of today, we haven't received any verbal or written communication from the property owner. (Grathwol - 6/24/20) 5/27/21 - Site Characterization completed under site no. 224244. No further action needed. Spill closed. (JHO)"

Remarks: "Phase II investigation test results showed impacted soil & ground water. Cleanup is pending."

DEC Memo: "10-24-2014 email from S. Frank: Dear Alex, We discovered material that has been identified as transmission fluid in well BW-1 at the 72nd Precinct site. The well location is shown on the attached site plan. The well is in the middle of the driveway area and there is no transmission fluid storage in this portion of the site so we suspect the fluid may have been introduced from the surface rather than migrating through the ground. We have a Vac Truck scheduled to evacuate the product next Wednesday. Let me know if you would like us to report a new spill for this finding. Sincerely, Steve Frank
5-4-2015 Reviewed a report dated 2/26/2015. EFR via vacuum truck was performed at BW-01 on October 2014 and the product thickness was 0.34' in BW-01. On November 6 2014, the product thickness was 0.02'. Approximately 8-gallons of oil groundwater mixture was removed from

the well. On December 4 and December 19, 2014, no free phase was recorded. I called S. Frank and requested that more monitoring events needed in order to determine if all free phase product was removed from the well. AZ 1-6-2016 Reviewed a report dated 5/28/2015. No free-phase product was measured in BW-01 since November 2014. The free-phase product was identified as transmission fluid. AZ 9-16-2016 Reviewed a report dated 3/10/2016. Spill Number 1407672 was reported as a result of free-phase product in well BW-01 which was identified as transmission fluid. LiRo performed fluid removal and has continued to monitor this well. No free-phase product was measured in BW-01 since November 2014. Based upon the monitoring data LiRo requested closure of Spill Number 1407672. I concur with this proposal. The following letter email was sent to S. frank and V. Brevdo on 9-19-16: Dear Steve, I have reviewed a Spill Closure Report dated March 3, 2016. The report stated that that spill #1407672 was reported as a result of discovery of free-phase product in well BW-01 which was identified as transmission oil. LiRo performed product removal and has continued to monitor this well. No free-phase product has been reported in well BW-01 since November 2014. Based upon this monitoring data, LiRo requested closure of this spill. This request is approved and the spill is closed. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov"

Remarks: "caller reporting that spill is caused by a unknown leak possibly from a vehicle. clean up is pending"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY TRANSFERRED FROM Y.KRIMGOLD. 10-12-2005 SVE and pump and treat systems are operated at the site. SVE system is extracting significant concentrations from the vadose zone. AZ 1/13/2006 Reviewed system report. Analytical results showed total VOCs concentrations in air samples at 550 ppb and 44.7 ppb in 1st sampling events. AZ 4-17-2006 Reviewed system report received in November 2006. Analytical results showed total VOCs concentrations in air samples at 1,832 ppb suggesting that SVE system continues to extract contaminants. URS recommended continuation of the groundwater extraction and treatment system. Groundwater sampling was performed. All wells except one showed exceedances ranging from 127 ppb to 19,100 ppb. Contaminant concentrations increased in wells MW-6,7,8,11 and 12. The average total VOC concentration increased from 6,297 ppb to 7,417 ppb. AZ 12/08/2006 Reviewed monitoring report dated September 22, 2006 and received on September 27, 2006. This report covers April - June 2006. On January 1, 2006 Greyhawk was assigned responsibility for this site. The site has SVE and GWET systems. VOCs were detected in all nine monitoring wells with concentrations

S102233280

ranging from 30 ppb to 14,700 ppb in MW-06. concentrations increased in two monitoring wells MW-01 and MW-08. It appears that the SVE system is not functioning efficiently as evidenced by relatively low VOC mass removal and restricted wellhead vacuum- 0.001 to 0.052 water column. The carbon unit should be replaced. Relatively low pumping rate limits the capture zone of 3 pumping wells. An increase in pumping rates would expand the size of the capture zone and might improve effectiveness of the SVE system. Significant VOC contamination persist in 7 of the 9 monitoring wells. Roux suggested continue quarterly gw monitoring, verify depth and condition of the ventilation wells, collect samples from MW-3 which was previously removed from the sampling program but is located very close to two other wells with significant VOC concentrations. Evaluate methods to optimize SVE and GWET systems. DEC concurred. AZ 4/26/2007 Reviewed monitoring report for the period of July - September 2006, dated December 15, 2006, and received on December 21, 2006, and report for the period of October - December 2006, dated April 11, 2007, and received on April 26, 2007. October - December 2006 Report stated that the SVE system is approaching asymptotic levels. Vacuum levels in four observation wells are low - 0.01 -0.04 , GWET system has low pumping rate which limits the capture zone of of the three extraction wells. Roux stated that increase in pumping rates would expand the size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations ranging from 2,252 ppb to 71, 110 ppb. Significant increase in concentration was observed in MW-10 from 9,010 to 71,100 of total VOC. In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved and systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved. The following e-mail was sent to DDC/ROUX/Greyhawk: I have reviewed monitoring report for the period of October - December 2006, dated April 11, 2006, for this site. Vacuum levels in four observation wells of the SVE system are very low (0.01 -0.04). GWET system has low pumping rate which limits the capture zone of the three extraction wells. Roux stated that increase in pumping rates would expand the size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations in groundwater (up to 71, 100 ppb of total VOC in well MW-10). Significant increase in total VOC concentrations was observed in MW-10 (from 9,010 ppb to 71,100 ppb). In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved

72 PRECINCT NYPD -DDC (Continued)

S102233280

and the systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved. AZ 1-22-2008 Reviewed January - September 2007 Report submitted on November 13, 2007. GWET is ineffective due to the restricted pumping rates. The SVE and GWET systems are not operating efficiently. Sheen was detected in MW-04 and MW-06 in April 2007. Soil investigation was performed in July-August 2007. The highest VOC concentrations in soil were detected in RXSB-04 75,000 ppb at 0 to 2 feet bls. RXSB-01 - 49,400 ppb of total VOC at 23-25 feet bls. MW-06 contained 9,980 ppb of total VOCs, MW-10-5,220 ppb of total VOCs. MW-02 was destroyed. Roux proposed shutting down SVE and GWET systems, implement enhanced bioremediation. Contacted Brian Morrissey. The site requires hydraulic control over migrating groundwater plume. Proposals for a new groundwater treatment system are required ASAP. Brian will get back to me with a timetable. AZ 1-23-2008 Conference call with Brian Morrissey and Andy Leddins. Bioremediation as main remediation strategy is rejected by DEC since the plume must be hydraulically controlled. I requested plume delineation along 29th street and establishing of hydraulic control over the groundwater plume. Roux will install delineation wells within next two weeks, perform high vac test and confirmation studies of DPE system within next three to four weeks. After the studies are completed a DPE system will be installed. Permo OX Plus injection will be performed along Th Street as an IRM simultaneously with constructing a DPE system. Timely quarterly should be submitted for this site. AZ 7-22-2008 Reviewed January - October 2007 through March 2008 Report submitted on April 21, 2008. The quarterly report submittal was significantly delayed. The SVE and GWET systems are not operating efficiently and high level residual soil and groundwater (up to 11,790 ppb of the total VOCs) contamination remains at the site. DEC requested installation of two additional monitoring wells to delineate offsite extent of groundwater contamination in January 2008 but the wells have yet to be installed. DEC requested and Greyhawk/Roux concurred that high vac test and confirmation studies of DPE system should be performed. The test has not been conducted and the DPE system has not been installed. The remedial progress at the site is unsatisfactory. Quarterly Monitoring Reports should be submitted on time. DPE system should be installed, delineation wells and needed testing performed without delay. A timetable for the above activities should be submitted to DEC within a week. An e-mail describing the above requests was sent to DDC/Greyhawk/Roux/V.B. AZ 7-3-2008 Received an e-mail from Brian Morrissey/site update: 1.The 2 offsite wells (RXMW-01 and RXMW-02) were installed and developed in late June/early July. The well casings and building corners will be mapped by a licensed surveyor on Friday, July 25th. 2.Groundwater levels in on-site and off-site monitoring wells were gauged during the week on July 14th. 3.Groundwater samples were collected during the week on July 14th. We expect to see preliminary results during the first week of August. 4. We reviewed soil data from prior CMs and further evaluated subsurface conditions (contaminant levels in clay/silt areas). 5.We conducted a 2nd round of vacuum testing and vapor sampling on July 9th. 6.ADT installed 10 injection wells in late June/early July. Well development activities were completed during the week on July 7th. 7.PermeOx Plus injections commenced on July 21st (as an interim remedial measure). 8.Soil samples were collected for laboratory analyses during installation of the monitoring wells and injection wells. Samples at intervals with elevated PID readings

were also sent for petroleum identification. Upon receipt of the results of the vapor sampling and soil analyses, Greyhawk and Roux Associates will develop the plan for modifying the existing remedial systems. Due to the priority status of this site, I will contact you at that time to discuss future remedial actions and a timetable. AZ 6-16-2009 I have reviewed a Monitoring Report dated March 19-2009 for the above site for the period of April 2008 through January 2009. According to the report, URS recommended excavating the isolated area of shallow soil contamination around MW-02. Apparently, this excavation has not been performed. In 2007 VOCs were detected in soil shallow zone (0'-2') at concentrations up to 75,000 ppb. The SVE and GWET systems are not operating efficiently. Groundwater and soil contamination remains at the site. Free phase product was detected on January 12, 2008 in RXMW-06 and identified as a mixture of gasoline and No.2 fuel (diesel). One round of bioremediation injection was performed on July 21, 2008. Post-injection monitoring has not been performed. The contamination has migrated off-site in a northerly direction to the other side of 29th Street. However, VOCs were non-detect in two off-site wells (MW-13 and MW-14) installed at DEC request. Roux proposed modification of the SVE system by applying full vacuum to one or two extraction wells and using packers. This proposal is approved. On-site 1,000 gallon emergency generator diesel UST and onsite heating oil tanks should be tested without delay in order to determine a source of contamination at the site. DEC has not received results of the post-injection monitoring. These results should be submitted to DEC without delay. GWET or DPE system modification/installation plans should be submitted to DEC. Remediation recovery system (GWET or DPE) should be capable of capturing the contaminant plume and preventing off-site migration. Working groundwater recovery system should be installed at the site. Additional bioremediation injection could be used only as interim remedial measure. AZ 10-21-2010 The site was discussed at October 19, 2010, meeting with DDC/LIRO. The SVE system has not been modified and currently shut off. 1,000 gal emergency generator tank was not located by Roux. 8,000 heating oil tank should be tested. Shallow excavation should performed as it was discussed at the meeting. LiRo will develop low flow multi well groundwater remedial system. Geoprobe borings will be performed prior to the excavation. I called S. Frank on October 21, 2010, to confirm investigation details. Design report will be submitted in November 2010. AZ 10-25-2010 E-mail from S. Frank/ Liro: Alex, Thanks for your call on the 72nd precinct site status following up our discussion from the quarterly meeting on October 19, 2010. Just to make sure I didn't miss anything, we discussed the following: 1 You asked that the shallow excavation work near MW-02 that Roux/NYSDEC worked out, should be implemented. I advised you that we had recommended sampling at that location to confirm that contamination is still present. 2 You asked that we implement modifications to the SVE system (i.e., packers and applying full vacuum to 1 or 2 wells) that Roux had recommended. 3 You asked about the status 1,000-gallon diesel tank for the emergency generator. I advised you that Roux reported that they could not find the tank. 4 You requested the status of tank testing for the 8,000 gallon heating oil tank. I found the tank tightness test report from August 2009 and have attached it. AZ 10-4-2010 An e-mail was sent to LiRo/V.Brevdo/F.Ashkan: Dear Steve, I have reviewed Quarterly and Site Turn-Over Status Report with the proposals dated August 3, 2010. The report provides very detailed information and comprehensive

72 PRECINCT NYPD -DDC (Continued)

S102233280

analysis of the site status. According to the report, the SVE/GWET system is down since 2008. Roux conducted packer tests and recommended SVE system modifications. Groundwater contamination appears to have migrated off-site northeast across 29th Street. Roux performed two rounds of PermeOx injection after which VOC concentrations slightly decreased in groundwater. Heavy soil contamination and relatively high dissolved groundwater contamination exist at the site. There are four USTs closed in place. Based on the above, DEC requires the following: Actual USTs information should be reconciled with the Petroleum Bulk Storage (PBS) records and changes filed with the PBS section. I suggest that the tanks closed in place should be excavated, utilities and structures permitting. SVE/GWET system should be restarted. SVE portion of the system should be modified. Modifications should be based on the Roux's pilot test results. Hot spot excavation of soil should be performed around wells IP-09 and MW-02. Investigation of the piping associated with the former gasoline UST and the trench drain system should be performed. If additional soil investigation for the purpose of excavation is needed, it should be performed without delay. Additional rounds of in-situ chemical oxidation should be discontinued pending soil excavation and restart of the remedial system. The pump test is approved and should be performed if needed. Wells MW-05 and MW-15 should be added to the monitoring program. SVOC analysis of ground water could be performed, if LiRo considers it necessary. 600 gallon waste oil UST should be located. A detailed work plan with the implementation schedule should be submitted to DEC no later than in 30 days. AZ 3-1-2011 Remedial Action Plan submitted on Dec. 1, 2010 was reviewed. The following e-mail was sent to S. Frank/ F. Ashkan/ V. Brevdo: Dear Steve, I have reviewed the Remedial Action Plan for the above site. A proposed excavation is approved. The excavation should include area around MW-07. The area of the excavation should be extended north, if feasible, to cover the contaminant plume. Tanks closed in place and associated piping should be excavated. Post excavation samples should be taken. Proposed GWET system should be modified to encompass contamination migrated across 29th Street. Contamination should be remediated on-site and off-site. SVE pilot test is approved. GWET system and SVE system should be developed after the excavation is performed and a monitoring round confirms the exact boundaries of contamination. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. AZ 3-29-2011 Reviewed quarterly monitoring report dated Dec. 14, 2011. Well RXMW-05 was converted to injection but, nevertheless, sampled. Total VOC concentrations ranged from 73 ppb to 16,213 ppb. The pump test was conducted but on Sept. 2010, and indicated a limited flow capacity. Bioremediation sample results do not indicate a reduction of contaminate concentrations due to the bio-injections that were completed by Roux in July 2008 and September 2009. The results of the packer test were inconclusive. Soil contamination is present along the northern portion of the building and along 2nd St. (north side) extending 8' below the water table. MW-07 exhibit a significant increase in total VOCs. AZ 6-30-2011 Reviewed quarterly monitoring report dated March 1, 2011. Excavation in the vicinity of IP-09 and a former fill port is planned. Installation of SVE wells is scheduled. I contacted S. Frank and requested to repeat GPR test to locate closed in place tanks. GWET is being designed. The site has gross dissolved petroleum contamination (up to 18,634 ppb of total VOCs). This is the LiRo's highest priority site. AZ 10-25-2011 At the

S102233280

meeting with LiRo in-situ chemical oxidation (ISCO) pilot test described in a report dated October 13, 2011, was approved. An ISCO pilot plan will be prepared and submitted to DEC for review. AZ 10-25-2011 The following email was sent to S. Frank/F. Ashkan/V. Brevdo: Steve, You can request a FOIL information for sp.#0907094 and Langan's report related to this spill. The report stated that the source of the contamination at the site is 72nd Precinct. AZ 1-30-2012 Reviewed QMR and in-situ chemical oxidation pilot test work plan dated November 14, 2011. Second GPR survey was scheduled for November 2012. ISCO Pilot Test approved by DEC approved by DEC at October 25, 2011, meeting will be implemented. Two additional monitoring wells will be installed west/northwest of destroyed well MW-02. This area was previously inaccessible due to the SVE/GWET system trailer. Wells RXMW-02, RXMW-04 and RXMW-05 will be replaced. AZ 11-15-2012 Reviewed a quarterly monitoring report (October 2011-April 2012). Dissolved contaminat concentration increased significantly in two wells MW-07 (from 6518 ppb to 12,930 ppb)and MW-10 (from 1677 ppb to 4973 ppb). Discussed the site with S. Frank. 11-16-2012 An email from S. Frank: Alex, Monitoring wells for the 72nd Pct work were replaced as follows: RXMW-02, replaced by RXMW-02R RXMW-04, replaced by RXMW-04R RXMW-05, replaced by RXMW-05R The wells were replaced in Feb-March 2012. The soil results from the well installations were reported in the previous quarterly report (dated 6-18-12). Groundwater results for the replacement wells are included in the latest quarterly report. AZ 11-16-2012 An email was sent to S. Frank/V. Brevdo/F.Ashkan: Dear Steve, I have reviewed a quarterly monitoring report (October 2011- April 2012). LiRo completed the first ISCO injection on April 10, 2012. Nevertheless, dissolved contaminant concentrations increased significantly in two wells MW-07 (from 6,518 ppb to 12,930 ppb) and MW-10 (from 1,677 ppb to 4,973 ppb). It seems that ISCO injections are not effective enough to treat existing offsite contamination. LiRo could proceed with the remaining ISCO injections. However, alternative plans for treatment of the offsite contamination should be developed and submitted to DEC. Sincerely, Alexander Zhitomirsky 4-3-2013 Reviewed a quarterly monitoring report dated 11-13-2013. Post injection groundwater sampling indicates a reduction in total VOC concentrations in wells with the dissolved contaminant plume. Also, some total VOC spikes in post injection samples were recorded. The following e-mail was sent to S. Frank/V. brevdo/ F. Ashkan: Dear Steve, I have reviewed and discussed over the phone with you the above site. LiRo proposed to expand ISCO Pilot Test Program to the precinct side of 29th Street. This proposal is approved. If this remedial strategy is not effective, an alterative remedial strategy should be implemented. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. Sincerely, Alex Zhitomirsky 10-9-2013 Reviewed Quarterly Monitoring Report dated March 4, 2013. LiRo will perform additional injections following re-evaluation of the calculated quantities of hydrogen peroxide and catalyst. On January 3, 2013, in a Progress Summary Meeting, DEC agreed with LiRo's recommendation to complete an ISCO Pilot Test Program on the precinct side of 29th Street. AZ 10-18-2013 Reviewed Quarterly Monitoring Report dated June 4, 2013. A Work Plan for ISCO injection is included in the report. Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City and is pending available NYCDDC funding. AZ 5-20-2014 Reviewed Quarterly Monitoring Report dated

MAP FINDINGS

72 PRECINCT NYPD -DDC (Continued)

S102233280

October 9, 2013. Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City and is tentatively scheduled. Potential off-site sources include the property of 149 29th Street and 822 4th Avenue, both located directly across (east) of the 72nd Precinct. The total VOC concentrations on site ranged from 7 ppb to 18,056 ppb. The total off-site VOC concentrations in off-site wells ranged from 302 ppb to 18,596 ppb. AZ 11-18-2014 Reviewed Quarterly Monitoring Report dated March 7, 2014 (Sept. 2013- January 2014). Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City. Potential off-site sources include the property of 149 29th Street and 822 4th Avenue, both located directly across (east) of the 72nd Precinct. In December 2013, LiRo collected soil and GW samples and sent them to FMC, as part of the treatability study (Klosur). The total VOC concentrations on site ranged from 11 ppb to 11,056 ppb. The total off-site VOC concentrations in off-site wells ranged from 19 ppb to 12,460 ppb. Free phase product was reported in injection well LIP-02 in January 2014. According to LiRo, there is a possibility that this free phase product could be attributed to the business located at LIP-02 (Address 149 29th Street. It belongs to active beverage distributor with constant truck traffic and trucks parked on sidewalk). AZ 12-24-2014 The following email was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Quarterly Monitoring Report and Klosur Injection Work Plan for the above site, received on October 6, 2014. The Work Plan proposed injection of Klosur Persulfate. This Work Plan is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on and off site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Alex Zhitomirsky - Engineering Geologist 2 2-26-2015 Reviewed a monitoring report dated 7/23/2014. The report stated that there is a possibility that an off-site source is present on the east side of 29th Street. LiRo has opened discussions with the 149 29th Street property owner (beverage center) and will attempt to reach an access agreement to complete an investigation within the building in the areas where previous investigation had identified petroleum impacts and a possible tank anomaly. AZ 5-05-2015 Reviewed a monitoring report dated 02/25/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Klosur Persulfate Injection Work Plan was approved by NYSDEC, however, implementation is delayed due to NYC DDC budget issues. Five ISCO have been completed. Some total VOC concentrations reported increases. AZ 1-06-2016 Reviewed a monitoring report dated 05/28/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Legal representative of this property was contacted in the first quarter of

S102233280

2015 and stated, he had not reviewed the Investigation Work Plan to date. The Klozur Persulfate Injection first round was completed in April 2015. Five ISCO have been completed. Some total VOC concentrations reported increases. AZ 5-05-2016 Reviewed a monitoring report dated 09/16/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Legal representative of this property was contacted in the first quarter of 2015 and stated, he had not reviewed the Investigation Work Plan to date. The Klozur Persulfate Injection first round was completed in April 2015. Four rounds of ISCO are anticipated. Some total VOC concentrations in groundwater reported significant increases. Total VOCs concentrations in groundwater were up to 12,000 ppb. Perdufate liberated/broke down the VOC sorbed onto the soil particles AZ 4-19-2017 Reviewed a monitoring report dated 09/29/2016. Off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. In June 2016, the 149 29th Street property owner signed an access agreement. LiRo is scheduling a limited boring program. Additional off-site injections utilizing Klozur Persulfate may be initiated following completion of the on-site treatment regime. In May 2016, damaged injection well LIP-05 was replaced. Total VOCs concentrations in groundwater were up to 4,100 ppb. AZ 6-6-2017 Reviewed a monitoring report dated 12/20/2016. On-site Post injection groundwater sampling results (August 2016) indicated the highest VOC concentrations in MW--06R2 (14,074 ppb). Off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. In June 2016, the 149 29th Street property owner signed an access agreement. LiRo is scheduling a limited boring program. Additional off-site injections utilizing Klozur Persulfate may be initiated following completion of the on-site treatment regime. AZ 9-13-2017 I have reviewed a report dated 3-01-2017. In 2016 soil borings were advanced onsite. The soil sampling results were compared with the previous results. In seven borings VOC concentrations in soil decreased. In four borings VOC concentrations increased up to 1,409,500 ppb. One soil boring was advanced off-site. Six soil samples were analyzed, none reported any VOCs exceedances. Groundwater samples reported no VOCs exceedances. LiRo will determine, based on the soil and groundwater data, the need for additional injections. AZ 12-8-2017 I have reviewed a report dated 6-09-2017. In October 2016 the fourth Klozur injection round was completed. Post-injection groundwater monitoring was completed on October 31, 2016. Soil sampling was performed in February 2017 - March 2017. 23 samples reported one or more VOCs at concentrations above CP-51 SCLs. Total VOCs concentrations ranged from 819 ppb to 1,334,300 ppb. Off-site investigation was performed in October 2016. A total of six samples analyzed, none reported any VOC exceedances. Two off-site groundwater samples were collected. VOCs and SVOCs concentrations were reported at 0.48-2 ppb. No petroleum contamination was identified in the soil and groundwater at the off-site property. AZ 2-15-2018 I have reviewed a report dated 8-22-2017. LiRo identified a possible UST (status unknown) at the off-site property, however, no petroleum contamination was identified in the soil and groundwater. PeroxyChem has revised the injection amounts and injection zones. A revised USEPA injection program was submitted on July 3, 2017. The highest total VOC concentration was

5,151 ppb in well MW-06R2. AZ 6-11-2018 Reviewed a report dated March 1, 2018, The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Work Plan for the above site. The plan proposed ISCO injections with Klosur in the sidewalk area of the 149 29th Street property. This proposal is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov 10-22-2018 I have reviewed a report dated 11-3-2017. In September 2017, a fifth injection was completed. The highest total VOC concentration was 3,049 ppb in well BW-01R ON 8/21/2017. AZ 1-07-2018 I have reviewed a report dated 6-11-2018. In December 2017, seven soil borings were advanced in the sidewalk area in front of the 149 29th Street property. Petroleum-related impacts were identified in several soil borings. The highest groundwater total VOC concentrations were encountered in well BW-01R on 8/21/2017 (3,049 ppb). AZ 5-13-2019 I have reviewed a report dated 9-24-2018. The highest groundwater total VOC concentrations were encountered in well MW-06R2 located on sidewalk on 5/11/2018 (8,668 ppb). Injections were scheduled for off-site part of the plume. Because of the concrete work further injection on-site are suspended. The on-site area will phase into monitored natural attenuation. AZ 8-21-2019 I have reviewed a report dated 1-08-2019. Another round of post-injection soil borings were advanced on-site in August 2018. Isolated pockets of soil contamination exist on-site in both Area 1 and Area 2. The first round of the off-site injections were completed in August 2018. The injections consisted of the injection of Klozur Persulfate and an activator (solution sodium hydroxide) into existing wells LIP2-LIP-09. The second stage of the injections was completed in October 2018 and post-injection samples were collected. AZ 11-29-2019 I have reviewed a report dated 3-20-2019. The highest groundwater total VOC concentrations were encountered in well LIP-08 located on the sidewalk and sampled on 11/7/2018 (5,697 ppb). LiRo will complete approved of-site ISCO injections and subsequent post-injection sampling and monitoring. AZ 2-25-2020 I have reviewed a report dated 7-16-2019. The third stage of injection was completed in March 2019. The highest groundwater total VOC concentrations were encountered in well LIP-08 located on the sidewalk and sampled on 05/7/2019 (8,881 ppb). AZ 9-18-2020 I have reviewed a report dated 8-7-2020. No free-phase product was measured in any gauged well during this monitoring period. Previously (February 2020) free-phase product was measured in well VW-04R at 0.19 feet thick. A product sheen (not measurable) was observed in monitoring wells LIP-06 and LIP-08 during purging in May 2020. Free-phase product was measured in injection well LIP-12 at 0.02 feet thick on December 2, 2019. Onsite sampling (West Side of 29th

S102233280

Street)-Area 1, Area 2, & Remainder of the Site-May 2020: a total of 18 groundwater samples were collected and analyzed. Out of the 18 samples analyzed, 14 samples reported one or more VOCs at concentrations above AWQSGVs. The total VOC concentrations in these 14 samples ranged from 19 micrograms per liter (ppb) in well VW-01R to 2,044 ppb in well RXMW-03R. Off-site sampling (East Side of 29th Street)-May 2020: Of the 13 off-site groundwater samples analyzed, seven samples reported VOCs at concentrations above AWQSGVs. The total VOC groundwater concentrations in these seven groundwater samples ranged from 182 ppb in well RXMW-02R to 7,390 ppb in well LIP-08. Overall, wells in both Area 1 and Area 2 have reported decreases in total VOC concentrations ranging from 36% to 98% post ISCO injection. The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Quarterly Monitoring Report dated August 7, 2020, for the above site. The report suggested a reduction in groundwater sampling from quarterly to semi-annual. Due to remaining off-site groundwater contamination, I consider that quarterly sampling is necessary. When the off-site contamination is no longer present or very small, the sampling could be reduced to semi-annual. Sincerely, Alexander Zhitomirsky Professional Geologist I, Division of Environmental Remediation New York State Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101-5401 P:718-482-6387 - alexander.zhitomirsky@dec.ny.gov 2-2-2021 Reviewed report dated December 8, 2020. The report stated that groundwater gauging was completed on August 3, 2020. The depth to groundwater ranged between 18.63 and 25.32 ft. bgs. No free-phase product was measured in any gauged well during this monitoring period. Previously (February 2020) free-phase product was measured in well VW-04R at 0.19 feet thick. The product was identified as kerosene. Product was removed from the well via purging during the previous (February 2020) sampling event. A product sheen (not measureable) was observed in monitoring wells BW-01 and VW-04R during purging in August 2020 as part of the August 2020 groundwater sampling event. Soil borings LSB-45 through LSB-50 were completed in February 2020 to evaluate current soil conditions within the ISCO injection area. Based on the boring logs, analytical data and comparisons to previous data, significant reductions in VOC concentrations have been identified, post-injection. Soil contamination has been reduced within the injection area by percentages ranging from over 30% to over 90%. Some residual VOC contamination does remain. However, contamination is confined to a small area (approximately 15 ft. laterally) within the sidewalk area. Based on observations of contamination in borings logs LSB-47, LSB-48, LSB-49 and soil analytical data, residual contamination remains in a thin lens of soil from approximately 20 to 25 ft. bgs within this confined area. The highest dissolved VOC contaminant concentrations (6,144 ppb) were recorded in August 2020 in the off-site well LIP-08. AZ 6-2-2021 Reviewed report dated December 8, 2020. The report stated that routine groundwater sampling and gauging during this monitoring period was completed in December 2020. Post-injection groundwater analytical data collected between December 2015 and December 2020 has reported a continuous and sustained reduction in VOC concentrations in the area of highest VOC concentrations (Estimated Impacted Groundwater Area). Total VOC reductions in sampled wells have ranged between 35% and 98% in select wells. Although VOC concentrations have shown a sustained decrease, the rate of reduction has slowed. The highest total on-site VOC

DEC Memo: "7/22/05: Closed out 9614390. Will clean up under this spill number. Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND PRIOR SPILL NUMBERS HERE - 9416269 9614390 6/7/2001 - Sangesland visited the site: Anton Junicic Ent. inc. (junk yard) with ECO Anthony Panipinto. The ground around the car dismantling area showed signs of petroleum pooling and saturation into the soil. Owners (brothers) Bernardo and Anton Jr. Junicic - 718-768-8884 Mr. Junicic presented drawings showing an oil/water separator which had been installed on the site in 1999. It is a buried unit with 2 stormwater drains leading into it. The water discharge goes into the NYC DEP sewer system. Oil is periodically pumped out of this unit and disposed of. Because the surface of the yard is soil (owner says it is cement 1' to 2' down) the rainwater had never been properly directed into the 2 drains. DEC wrote a DO WORK letter (6/8/2001) directing Mr. Junicic to: 1) Excavate the site (soil/gravel) down to either clean soil or a solid barrier (old cement floor). Contact DEC for a site inspection. 2) If DEC inspection goes well, regrade the property and pour a new cement floor. Contour this floor so rainwater from the whole property flows to the proper drains. 3) Reconfirm that the water discharge from the oil/water separator is properly hooked up to the city sewer system in accordance with the regulations of the NYCDEP. 4) Design the property layout to allow access to the Blue Cover on the separator unit. 5) Maintain a log book for the drainage of the oil out of the separator unit. On future inspections, this information will be requested to provide that the separator system has been maintained. Submit a written plan and schedule of how this work will be performed. This plan is due to DEC by July 31, 2001. 7/11/2001 Sangesland went back to the site. Mr. Junicic is completing the required work in phases. Today the north 1/3 of the site had been cleared and excavated. Sangesland saw one hot spot which was removed while there. After today's inspection, an 8 to 10 reinforced cement slab was going to be poured and contoured over the full north 1/3 of the property. 8/14/2001 Sangesland (from the street) could see that the north 1/3 of the lot had been cemented and Mr. Junicic had redeployed much of his equipment over this area. It appears that he is clearing out the south west 1/3 of the site. I assume this will be done soon. 4/15/2002 Sangesland could see that 2/3 of the site had been paved over. Mr. Junicic said he would move the container boxes (used for storage) and would pave the remainder of the site soon.

3/30/2006 Requires a site visit to confirm that the whole lot has been paved over with cement. 8/26/08 - Raphael Ketani. I made a site visit at the request of Steve Sangesland, case manager. I met one of the workers who told me that the boss and the supervisor were both away from the shop. The worker called his boss who told him that it would be alright for me to look around. The shop is very overcrowded with car parts. I inspected the northern part of the site first. There was a small pile of soil and fill under a few cars. A spot of bare concrete was visible next to the pile of material and I had the impression that there actually was concrete under the material. Next, I viewed the back of the site. There was concrete everywhere in plain sight. Lastly, I viewed the southern part of the site. Here there was a depressed area with a sharp border, but which had a historical fill base. The entrance to this part of the shop had bare historical fill and comprised an area of about 800 to 1000 square feet. The worker I had met told me that they ordered the concrete, but they are waiting on a contractor to install it. After this, I left. 8/21/2013 Someone from spills needs to make a final visit to this site. It's a junk yard on Third Ave under the elevated hwy. It's an open lot between 2 buildings. Steve worked with the owners back in the 2001-2004 time frame to scrape up most of the lot and pour a cement base. They did 1 quarter of the lot at a time. They have completed 3/4 of the work. I never saw the rear/southern quarter completed. They have been inspected several times, but this final quarter has not been done. 05/27/14-Hiralkumar Patel. with approval from DEC DeMeo, case transferred from DEC Sangesland to DEC Patel. alternate address: 776-778 3rd Ave PBS #: 2-610070. as per PBS record, the site has one 275 gal waste oil AST in contact with impervious barrier. the tank was installed in July 2001. other spills : 9416269, 9614390 spill # 9416269 was reported on 03/6/1995 due to possible contamination at the site. case was closed and merged with 9614390. spill # 9614390 was reported on 03/12/1997 by NYPD due to petroleum contamination at the site. case closed and merged with 0102524. 06/04/14-Hiralkumar Patel. 10:30 AM:- visited site. found new concrete in visible areas in most of the site, except southwest corner, where broken asphalt was noted. found petroleum stains on concrete surface. site was full of auto parts. Anton Junicic Ent. Inc. Attn.: Bernardo 776 3rd Avenue Brooklyn, NY 11232 PH. (718) 768-8884 based on observations during site visit earlier today and information available to date, no further action needed and case closed."

Update By: HMDUDEK
Site Description:

"Location: The site is located in Sunset Park, a mixed-use urban area of Brooklyn, New York, which includes residential, commercial, and industrial areas. The site consists of one lot (Lot 39) totaling approximately 19,605 square feet (sf). Site Features: The site is currently under re-development by the NYCSCA. The site is bounded to the north and northwest by Greenwood Cemetery maintenance facility; to the east and northeast by 5th Avenue followed by Greenwood Cemetery; to the south and southeast by 5th Avenue followed by the MTAs Jackie Gleason Bus Depot; to the south and southwest by 36th Street followed by a gasoline station, car wash and commercial offices; and to the west by a three-story residential building with a first floor church occupant. Surrounding property uses are commercial, residential, and institutional. Current Zoning and Land Use: According to the New York City Department of City Planning (NYCDPC) Zoning Map 16B, the site is zoned for manufacturing use (M1-2) and is improved with a two-story building. The site is currently vacant. Past Use of the Site: The eastern portion of the site was first known to be developed in 1903 with elevated train tracks and an elevated train car repair shop. By 1926, the train car repair shop was demolished and the lot was vacant with the exception of the elevated train tracks (on a platform). The current site building was constructed in approximately 1953, and used for manufacturing purposes including jewelry fabrication. By 1997, the second floor was utilized as a garment assembly facility and by 1998, the first floor was used as a nightclub. Since at least 2004 through 2017, the building has been used as a church. The paved area is

fenced-in and was used for automobile sales and automobile parts scrapping operations until the New York City School Construction Authority (NYCSCA) purchased the property. The western portion of the site was developed with a four-story residential building from at least 1903 until 1951, when it was razed. Since approximately 1999 to 2017, a trailer has been present on the western portion of the lot and the unpaved area has been utilized for storage of automobiles. The site is listed in the Department's Petroleum Bulk Storage (PBS) tank database for one 1,500 gallon underground storage tank with a status of closed prior to 03/1991. The PBS records indicate the tank is vaulted with no access for inspection. Site Geology and Hydrogeology: Geological data obtained as part of the Remedial Investigation (RI) and from previous reports indicates the principal geological units, from top to bottom, are: 1) fill material consisting of reddish brown sand, silt, gravel, and miscellaneous debris (i.e., metal, glass, asphalt, slag, coal ash/ash, concrete, red brick, and wood) from the ground surface to depths ranging from 11.5 feet below ground surface (bgs) to 48 feet bgs and 2) reddish brown, dark brown, and light brown fine to medium sand, silt, and fine gravel beneath the fill to the terminal depths of the borings, which ranged up to 70 feet bgs. Bedrock is expected to be at greater than 200 feet bgs. Based on the two rounds of groundwater surface elevation measurements, the depth to groundwater ranges from 46 feet bgs to 53 feet bgs and the predominant direction of groundwater flow in the eastern portion of the site is towards the northeast. A site location map is attached as Figure 1. "

Env Problem:

"Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs) and pesticides. Soil: The primary contaminants found in subsurface soils are polycyclic aromatic hydrocarbons (PAHs) and metals typically found in historic fill, which is generally present in the top 12 feet of the site. Eleven PAHs were detected in soils down to 12 feet below ground surface (bgs) during the RI, included but not limited to, anthracene at 150 parts per million (ppm) (restricted residential soil cleanup objective (RRSCO) is 100 ppm), benzo(a)anthracene at 200 ppm (RRSCO is 1 ppm), benzo(a)pyrene at 180 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 210 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 85 ppm (RRSCO is 3.9 ppm), chrysene at 190 ppm (RRSCO is 3.9 ppm), dibenzo(a,h)anthracene at 98 ppm (RRSCO is 0.33 ppm), fluoranthene at 490 ppm (RRSCO is 100 ppm), indeno(1,2,3-cd)pyrene at 98 ppm (RRSCO is 0.5 ppm), phenanthrene at 560 ppm (RRSCO is 100 ppm) and pyrene at 590 ppm (RRSCO is 100 ppm). Metals, including arsenic, copper, lead and mercury were found in site soils down to 12 feet bgs. Arsenic at 21 ppm (RRSCO is 16 ppm), copper at 1,300 ppm (RRSCO is 270 ppm), lead at 1,200 ppm (RRSCO is 400 ppm) and mercury at 1.5 ppm (RRSCO is 0.81 ppm). Two soil samples collected from the northeast portion of the site were characterized as hazardous waste for lead, exceeding the regulatory limit of 5 milligrams per liter (mg/L). It is currently unknown if the elevated lead in soil extends off-site. There were no VOCs, PCBs, pesticides or herbicides detected at concentrations exceeding the RRSCOs. Three surface soil samples collected from the northern portion of the site contained PAHs and metals slightly above their respective RRSCOs. Groundwater: Six VOCs were detected in groundwater including 1,1,1-trichloroethane (TCA) at 7.9 parts per billion (ppb), (class GA standard of 5 ppb), chloroform at 25.9 ppb (class GA standard of 7 ppb), cis-1,2-DCE at 7.9 ppb

(class GA standard of 5 ppb), MTBE at 2,200 ppb (class GA standard of 10 ppb), toluene at 9.1 ppb (class GA standard of 5 ppb) and formaldehyde at 2,700 ppb (class GA standard of 8 ppb). Three SVOCs were detected above standards as follows: benzo(a)anthracene at 3.7 ppb (class GA standard 0.002), bis(2-ethylhexyl)phthalate at 10 ppb (class GA standard 5 ppb) and chrysene at 3.4 ppb (class GA standard 0.002 ppb). No PCBs or metals of concern were detected in groundwater over standards. Soil Vapor: Several VOCs, including petroleum-related and chlorinated, were detected in soil vapor. Chlorinated VOC detections included TCA at 6,200 micrograms per cubic meter (ug/m³), 1,1-dichloroethene at 28 ug/m³ and vinyl chloride at 400 ug/m³. Petroleum-related VOC detections included benzene at 4,000 ug/m³, ethylbenzene at 500 ug/m³, p/m-xylene at 330 ug/m³, o-xylene at 370 ug/m³ and toluene at 2,700 ug/m³. The VOCs detected in soil vapor are likely site-related from historical site activities or from the historic fill present beneath the site. Based on these results, more information is necessary to assess the potential for off-site soil vapor intrusion. Off-site soil vapor intrusion sampling will be performed during this coming heating season. "

Health Problem:

"The site is completely fenced and portions are covered by an on-site building, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Additional investigation is needed to evaluate potential to come in contact with impacted soil and groundwater migrating off-site. Volatile organic compounds in soil vapor (air spaces within the soil) may move into nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the onsite building is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern in that structure. Additional investigation is needed to evaluate whether actions are needed to address soil vapor intrusion in off-site structures."

 Site Description: "The site is located along the Upper New York Bay, in the Sunset Park Section of Brooklyn, in the western part of Kings County, New York. The site borders an access road referred to as Marginal Street (which parallels 1st Avenue), between 45th and 50th Street. The land immediately adjacent to the site is used for commercial and industrial purposes, although residential housing areas are present within approximately 1,500 to 2,000 feet of the site. The 17.3-acre site includes approximately 14 acres of urban land that was created by landfilling between four piers that were part of the former Bush Terminal warehouse complex. The remaining pier structures are dilapidated and extend 600 to 800 feet into the Bay from the existing fill areas. The site is currently fenced to prevent public access. The total landfill area is approximately 14 acres in size. Partial filling between two piers (Piers 3 and 4) has resulted in the presence of two ponded areas in the northeastern portion of the site. While most of the landfilled areas are covered with grasses or barren soils, the westernmost fill area between Piers 2 and 3 supports an area of mature trees (referred to as the existing wooded area). Debris piles are present in some areas, especially along the edge of the site bordering Marginal Road. The Site Investigation (SI) was conducted between May 1999 and May 2001. The field activities and findings of the investigation are described in the SI report.

Additional studies were conducted between March and July 2002 to support the evaluation of remedial alternatives and are described in the Remedial Alternatives Report (RAR). This site is being tracked under the Environmental Restoration Program (ERP) as site number B00031-2. "

Env Problem: "The primary contaminants of concern at the site (in groundwater, soils and sediments) that exceed their SCGs are semivolatile organic compounds (SVOCs) and inorganics (metals). VOCs, the pesticide 4,4-DDT, and PCBs were also detected at levels exceeding SCGs, but to a much lesser extent than the SVOCs and metals. Sampling has revealed contravention of groundwater standards by 23 organic chemicals and 12 metals. It has been determined that no significant threat exists to the environment. While groundwater quality at the site has been impacted, it is unlikely that surface water quality criteria will be exceeded when groundwater discharges to the Bay, due to the low rates of groundwater discharge and the relatively low concentrations of contaminants in groundwater. Therefore, groundwater is not expected to present a potential environmental impact."

Health Problem: "The area is served by public water, therefore, exposure to contaminated groundwater is unlikely. There is a potential for direct contact exposure with contaminated surface soil. However, a clean soil cover over the site and landfill gas control measures will minimize the potential for exposures to future park users. Site access is currently restricted by a fence minimizing the potential for exposure."

Contact Name:	GEORGE MANDUINA
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE 06/13/05: A heating contractor, Roy Kay, Inc., was modifying the roof top heating units to operate on dual fuel. While bleeding the lines of air, the operation was left unattended and an unknown amount of heating oil was released to the roof and apparently impacted a roof drain leading to a NYCDEP sewer. It is unsure how much was lost because of an unexplained inventory discrepancy. At the time of the spill, both boilers were turned off but the facilities Dravo unit (another type of heating unit) and water heater were still active. Also, in order to bleed the roof top lines, an unknown amount of product was pumped off and most likely removed by the contractor; yet there was a discrepancy of 242 gallons. Also, the contractor did not inform NYCT or make notification to DEC of the spill at the time it happened. The contractor attempted to perform the cleanup without telling anyone. Once discovered, NYCT hired an emergency response contractor to remove all of the contaminated debris already generated by the heating contractor and to finish the remaining cleanup. This did not allow NYCT to accurately determine the extent of the spill, nor the possible amount lost. The tank is and was at that time, a double walled fiberglass tank with interstitial monitoring and double walled piping with leak monitoring sump sensors. There is no record of any alarms from the interstitial or sumps sensors and no report of a loss of product in any of the log books. It would appear that the tank was not leaking but that product was being with drawn from the tank for several reason and that the product was no accounted for. "
Remarks:	"tank was being filled - is a roof unit and 100 - 150 gals of oil were spilled in the filling process"

HW Code: 224143
Record Add: 08/24/2010
Record Upd: 11/12/2010
Updated By: MOBARRIE
Site Description: "The Site is located in the Gowanus section of Brooklyn in a zoned manufacturing area. The site was formerly used by Moore McCormack Lines, a steamship company (dates of occupancy unknown). Subsequently, Continental Terminals used the pier shed to store and distribute cocoa beans into the late 1990s. The shed was removed and the pier was then used by American Warehousing for vehicle storage. The Site also contains a garage that was used for vehicle maintenance. The Site was recently paved. The northern portion of the Site is used for storage of sea containers by the New York City Police Department, and a small electric power generating station operated by the New York Power Authority occupies the south part of the Site. Immediately northwest of the Site is Upper New York Bay/Gowanus Canal, immediately northeast is industrial/manufacturing, and immediately southeast are commercial and office buildings. The Site is approximately 98,010 square feet (2.2 acres) in size and is occupied by the NY Power Authority as well as the storage area for sea containers for NYPD. The nearest residential units are 0.12 miles (approx. 650 feet) to the east-southeast. There are no records of Petroleum Bulk Storage or Chemical Bulk Storage on the site. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites. "
Env Problem: "Based upon investigations conducted to date, the primary contaminants of concern at the site include mercury, lead and copper. In July 2009, following discovery of petroleum contaminated soil during excavation to support repairs to the Site?s bulkhead, three test pits were excavated to determine the extent of the petroleum impacts. A total of seven sidewall soil samples and one grab groundwater sample were collected from the test pits. One sample was also collected for waste classification from the stockpiled soil excavated from the initial excavation and the test pits. Sidewall

samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, pesticides and Total Petroleum Hydrocarbons. The composite waste classification sample was analyzed for TCLP parameters as well. The following contaminants with maximum concentrations were observed in soil: 17 ppm mercury; 1,100 ppm lead; and 330 ppm copper. The Part 375 Industrial Use Soil Cleanup Objectives (SCOs) have been exceeded for mercury, and the Part 375 Commercial Use SCOs have been exceeded for lead and copper. Groundwater samples were all below applicable Groundwater Standards for VOCs and SVOCs, but were not analyzed for metals. Depth to groundwater is approximately 9-15' below grade and is likely influenced by tidal action due to the immediately adjacent Gowanus Bay. Site characterization is required to evaluate the presence or absence of hazardous waste on the site, and to collect data sufficient to determine if the site poses a significant threat to public health or the environment. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites. "

numerous buildings and other facilities. The Department of Navy through contract with the Todd Shipyards Corporation utilized the site as a ship building and ship repair facility. In 1949 the site was declared surplus by the Department of Navy, and in 1965 the General Service Administration (GSA) conveyed it to the Todd Shipyards Corporation. In July 1985 the 25.88 acres site was sold by Todd Shipyards Corporation to the New York City Industrial Development Corporation. The current user of the site is New York Shipyard Corporation.

BROWNFIELDS:

Name:	SUNSET INDUSTRIAL PARK
Address:	74 20TH STREET
City,State,Zip:	BROOKLYN, NY 11232
Program:	BCP
Site Code:	611063
Acres:	0.940
HW Code:	C224148
SWIS:	2401
Town:	New York City
Record Added Date:	09/09/2020
Record Updated Date:	11/26/2021
Update By:	HMDUDEK
Site Description:	"Location: The site is identified as Sunset Industrial Park and is located at 74 20th Street Brooklyn, New York on the Kings County Tax Map Tax Block 638, Lot 10. The site is bounded by a lumber yard to the east; and industrial property to the west; 20th Street to the north; and 21st Street to the south. Further to the west is an area with numerous industrial, manufacturing, and commercial properties known as Sunset Industrial Park, before reaching the Gowanus Canal and to the east is Interstate 278. Site Features: The site is 0.94 acres with Lot 10 consisting of an asphalt parking area with one two-story building and three one-story buildings. Current Zoning and Land Use: The current property zoning is M3-1 for Industrial and Manufacturing Use. M3 districts are designated for areas with heavy industries such as power plants, solid waste transfer facilities, recycling plants, and fuel supply depots. The area surrounding the site mainly consists of industrial and manufacturing buildings with a

mix of commercial, vacant properties, and properties used for transportation/utilities (Figure 5). Interstate 278 and the nearest residential and institutional (South Brooklyn Medical Associates) areas are approximately 500 feet west of the site. The Gowanus Canal is located approximately 400 feet to the southwest of the site. Past Use of the Site: Historic Sanborn fire insurance maps that depicted development at the site as early as 1906 as a cedar mill/cigar box manufacturing facility with a sawmill with an independent electric plant. By 1922, the facility appeared to be part of a printing ink manufacturing facility. The 1951 historical Sanborn fire insurance maps showed the site in a similar configuration to its current appearance and was the first documentation of the site being occupied by Debevoise Company, a paint manufacturing facility. Site records show that various paint and lacquer companies occupied the buildings until approximately the late 1980s in which various commercial companies operate the buildings at the site. The site is currently vacant. During operation as a paint manufacturing facility, the site was reported to produce waste from the cleaning of paint mixing vats with xylene. The facility was assigned a USEPA Handler ID of NYD091590471. The EDR database report contained information about the site's regulatory status including types of waste generated, which include unknown solvent mixtures, xylenes, benzenes, phthalates, phenyl mercury acetate, 2-propanone, 2-butanone, n-butyl alcohol, and various paint sludges and waste waters. A Consent Decree obtained from the United States Environmental Protection Agency (US EPA) Online Freedom of Information Law (FOIL) database indicated that the Debevoise Company, a former owner and operator of the site, had violated record keeping, waste storage, and closure requirements of RCRA. A 1985 RCRA Site Closure Plan (1985 RCRA Site Closure Plan) detailed procedures concerning the waste removal, cleanup, and decontamination activities required to decommission the facility, and included a soil sampling plan. The plan designated the location of the Waste Storage Area (located to the south and southeast of the main plant building) and noted that this area was used to store paint sludges and spent solvents in drums prior to proper off-site disposal. The 1985 RCRA Site Closure Plan indicated that once the wastes were to be removed, the soils beneath the hazardous waste storage area were to be analyzed for benzene, toluene, and xylenes, and that action levels would be developed in review of analytical results in consultation with regulatory agency personnel. The plan also provided contingencies for contaminated soil removal if soils above the action level were identified. The plan also noted that all process equipment onsite would be emptied and inspected for removal. Based on the available documentation obtained through FOIL from USEPA FOIL Website, there was no confirmation that the 1985 RCRA Site Closure Plan was implemented. Information obtained from the USEPA RCRA-Info Facility Information Webpage indicated that the interim status of the facility has received clean closed status in June 12, 1987. Based upon the information obtained from an Environmental Data Resources (EDR) search, Decorative Novelty was an operator at the site from approximately 1997 through 2014. In 1999, Decorative Novelty had violations from the USEPA, no further information was provided in the EDR report. However, the following hazardous wastes were listed in association with Decorative Novelty as a small quantity generator: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol. Based on information contained with the EDR report, the

1000224955

site appeared to have been flagged by the USEPA as potentially requiring Corrective Action after it received a medium corrective action priority in 1994 from a 1993 RCRA Facility Assessment (RFA) conducted by the USEPA. As a result, the NYSDEC is tracking the site under NYSDEC Site Code (224148) with a PR site classification (i.e., potentially in need of site remediation). The site was sold in 1986 to 4 Square Realty and OTW Group which owned the site until 2015. Site Geology & Hydrogeology: The site surface is relatively flat with a land surface elevation 5-10 feet above mean sea level. The site is underlain by historic fill to depths to approximately two to seven feet below land surface (ft bls). The subsurface beneath the historic fill is comprised of medium to coarse sand with some gravel and silt to approximately 15 ft bls. Bedrock is believed to be present at over 100 ft bls in this area. Groundwater, when encountered, was generally encountered at approximately eight ft bls. Groundwater flow direction is likely influenced by tides, subsurface utilities, bedrock topography, and other subsurface features. For the purposes of assigning gradients, the assumed groundwater flow direction is west-southwest in the area of the site, based on the nearby presence of the Gowanus Canal. "

Env Problem: "Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Request Agency: Not reported
Former Citation: Not reported

SHWS:

Name: EMPIRE ELECTRIC COMPANY
Address: 5200 1ST AVENUE
City,State,Zip: BROOKLYN, NY 11232
Program: HW
Site Code: 57687
Classification: Significant threat to the public health or environment - action required.

Region: 2
Acres: 0.500
HW Code: 224015
Record Add: 11/18/1999
Record Upd: 02/04/2021
Updated By: SMQUANDT

Site Description: "Location: The 0.5-acre Empire Electric Company site is located at 5200 1st Avenue in Brooklyn, New York on the southwest corner of 52nd Street and 1st Avenue. Site Features: The site previously contained a deteriorated, vacant, red brick building that once covered the entire site. This building was razed by NYSDEC during an interim remedial measure (IRM) in 2017 in order to make the site safe to perform the Remedial Investigation. Currently, the entire site has a cover system consisting of fine gravel as the top layer and is presently used as a parking lot. Current Zoning and Land Use: The area is primarily industrial (zoned 3, heavy industries), with a potato chip manufacturing plant (Utz), a New York City Department of Sanitation vehicle maintenance and storage building, an DHL courier company, the former BUG Kings County Works manufactured gas plant site, and the waterfront (Bush Terminal docks) in the general vicinity of the site. Past Use of the Site: The building was constructed in 1892 by the Brooklyn City Railroad Company for use as a power plant for the municipally owned trolley system. The building was used for electrical generation until the 1930s when the trolley system was abandoned. The facility was conveyed to the city of New York in 1940. On September 5, 1951, the City transferred the property to Hastone Realty Corp, who then subdivided the parcel into two lots (Lot 6 and Lot 9). Lot 9 was sold, and Empire Electric operated on Lot 9, in the eastern two thirds of the building, from 1951 to December 1986 when the property was once again sold. Empire Electric's operations consisted of reconditioning electrical apparatus, including transformers containing PCBs, and warehousing. The site was sold again in 1986, but the building remained unused and abandoned for commercial/industrial purposes; however, homeless people were found to be regularly inhabiting the building. Site Geology and Hydrogeology: The site is situated approximately 1,200 feet from the Upper New York Bay at the western end of Brooklyn and is relatively flat in topography. The elevation of the site is approximately 16 feet above mean sea level (msl), sloping gradually up from the Hudson River. Site soil directly beneath the building consists primarily of fill and debris materials, underlain by sand and gravel. The water table beneath the site occurs at a depth of approximately 17 to 21 feet below ground surface (bgs). Regional groundwater flow direction is to the west, toward the Upper New York Bay. The depth to bedrock is unknown but is likely greater than 100 feet bgs. Surface drainage

generally follows the topography, and flow is northwest along 52nd Street toward the Upper New York Bay. Storm water drains are present along 52nd Street and First Avenue. Surface runoff collects in these drains and then flows directly into the Upper New York Bay."

Env Problem: "Nature and Extent of Contamination: Based upon investigations conducted to date and findings observed during the 2017 interim remedial action (IRM), the primary contaminant of concern are PCBs and trichlorobenzene. Post-excavation soil samples from beneath the former basement floor exceeded the 1 ppm surface and 10 ppm subsurface criteria historically used to assess PCB contamination in soil. Two soil samples also exceeded the TSCA definition of hazardous waste. The site presents a significant environmental threat due to the presence of high concentrations of PCBs at and below the water table and expectation of off-site migration of PCBs via groundwater. "

Health Problem: Not reported
"The site is completely fenced, and contaminated soil is at depth below clean backfill, stone and concrete. Therefore, contact with contaminated soil is unlikely. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil), may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. However, there is a potential for soil vapor intrusion in future on-site buildings and off-site buildings."

Site Description: "Location: The subject property is located at 29 53rd Street in the Borough of Brooklyn, Kings County, NY in an urban area. The subject property consists of about 0.7 acres designated as tax block 803, Lot 41. Site Features: The site currently contains a one-story warehouse-style building which occupies the entire property. Current Zoning/Use(s): The site is currently zoned as M3-1 (industrial and manufacturing district) and is used as a storage and distribution facility for packaged dry snacks. Historical Use(s): Since 1977 the Site has been occupied by Clem Snacks. A mechanic shop containing hydraulic lifts was noted to be located in the southeastern portion of the building from 1977 to 2004. Historically the site was utilized mainly for industrial purposes, including the E.W. Bliss projectile Department, paper warehouse and metal product manufacture from 1906 to 1977. Two crude oil tanks were depicted adjoining the southwestern side of the subject building on the 1926 to 1942 Sanborn maps. Site Geology and Hydrogeology: Soil borings conducted in 2013 identified sand and silt beneath the one-foot thick concrete building slab. Some

gravel, brick and concrete fragments were observed in the boring down to 20 feet below grade; this debris represents fill material.
Groundwater is present at a depth of approximately 12 feet below grade. The groundwater beneath the subject property is expected to be tidally influenced, and generally flowing to the west towards Gowanus Bay, which is located approximately 400 feet west of the site."

Env Problem: "Nature and Extent of Contamination: The following information was obtained from two separate Phase II reports prepared for the site in 2012 and 2013. Soil Borings identified evidence of petroleum non-aqueous phase liquid (NAPL) at the water table in at least 6 on-site boring locations. Volatile organic compounds (VOCs) were found including tetrachloroethylene (PCE) at a maximum concentration of 7.7 parts per million (ppm), trichloroethylene (TCE) at a maximum concentration of 12 ppm, and cis-1,2-dichloroethene (cis-1,2-DCE) at a maximum concentration of 18.2 ppm. Groundwater VOCs were detected in temporary wells on-site, including: PCE at a maximum concentration of 62 parts per billion (ppb); TCE up to 78 ppb; and cis-1,2-DCE up to 33 ppb. Soil Vapor No soil vapor data has been collected to date. " Not reported

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

DEC Memo: "1/18/13: Jane O'Connell received email from Joe Crua (NYSDOH) transmitting a copy of the NRC notification (see eDocs). Contacted Edward Shea, attorney for property owner. He stated that Phase II was performed on behalf of TD Bank for loan refinance purposes. Found solvent contamination in soil at 14 feet below floor slab (above water table). Mr. Shea characterized the concentrations as slightly above standards , but did not know the actual concentrations or to which standards the results were compared. I requested that he send me a copy of the report. (JHO) 2/13/20 - Spill transferred to Bryan Wong - site is managed under Consent Order, site no. 224249 (JHO)"
Remarks: "Drill samples done as per refinacing company showed impacted soil at approx. 14 feet. Cleanup or further action is pending DEC requirements."

Site Description: "Location: The site is located in the Red Hook section of Brooklyn, in the City of New York. The site is listed as Block 494, Lot 1 and is located on the south east corner of Court St. and Halleck St. in close proximity to the Gowanus Canal. An off site area has been designated Operable Unit 2 (OU2). This area is the southeast portion of the Red Hook Park's Soccer Field 1. Site Features: The site is currently a parking lot with a small building near the middle of the site occupying approximately 1/8th of the property acreage. OU2 is a public park with walking paths and a soccer field with an artificial surface. Current Use: The site is currently leased from Red Hook Realty Co. by National Grid who is using the site as a parking lot for their service vehicles. OU2 is a park and is open to the public. Historical Use: The property was used for tar paper manufacturing as depicted in the 1886 Sanborn map which shows tar pitch storage areas on the corners of Smith St./Halleck St. and Court St./Halleck St. OU2 has been a public park since the 1940s. Site Geology and

643 COURT ST. (Continued)

S117269718

Hydrogeology: Based on geological information at an adjacent site, the groundwater at this property is anticipated to be less than 5 feet bgs. Groundwater flow is anticipated to flow radially from the Gowanus Canal traveling north, northwest, west, southwest, and south. To the south and west of the site, the coastline is lined with sheet piling and to the east of the site, where groundwater enters, the coastline is lined with rip rap. The groundwater is likely saline due to its proximity to the canal. Much of this area is reclaimed water front property with fill material anticipated to exist from 0 to 12 feet bgs. A gray colored, low permeability clayey layer (former base of the Gowanus Canal) is also anticipated to exist beneath the fill material with a thickness of approximately 8 feet. "

Env Problem: "This site has had several instances over the last decade of tar seeping out of the ground, getting cleaned up, and reappearing some time later. Further investigation is required to determine the nature and extent of tar beneath the surface. "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Description:

digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates soil vapor intrusion is not occurring on-site and is not a concern for off-site buildings.

Location: The site is located at 688-700 Court Street within the Red Hook Industrial area of Brooklyn. The site is located southwest of the Court Street and Halleck Street intersection. Site Features: The site is relatively flat and mostly covered with blacktop and concrete. A small area in the southeast corner has a soil cover. Several previously decommissioned site buildings were either removed or rehabilitated without the Department's approval. The site is occupied by several tenants including a garbage hauling company, a motor coach repair facility, an electronics distribution warehouse, a commercial laundry repair business, a stone cutting business and a sheet metal fabricator. The dual-phase extraction remedial system is not operational. The site is surrounded with a concrete wall of varying height. Current Zoning and Land Use: The site is zoned for industrial use. The surrounding parcels are currently used for a combination of commercial, light industrial and recreational uses. The site is bordered immediately to the east by Court Street, National Grid and Spentonbush Red Star Companies, to the west by Clinton Street and American Import Export Trucking and to the south by Bryant Street and a Buckeye, LLC oil terminal. A recreational park (Red Hook Recreational) is located immediately to the north of the site. Past Use of the Site: Milliken Brothers Iron Works occupied the southwestern portion of the site in 1904. In 1939 John F. McKenna, Inc. Lumber Yard, Marine Canvas Supply Corporation and John Menton Boiler Maker occupied the site. The site remained a lumberyard and marine canvas supply business until approximately 1958, when manufacturing at the site began. Historic manufacturing processes at the site include production of metallic-organic soaps and salts, phosphates and epoxy plasticizers. A hot-oil system, that used PCB containing oil, was part of the manufacturing process. Contamination at the site appears related to several historic operations, including materials handling from the chemical manufacturing processes, as well as releases to the environment from the hot oil system. Site Geology and Hydrogeology: The site was formed by backfilling the marsh and waterfront areas of the Gowanus Canal in the late 1800s through the early 1900s. Fill material consisting of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.) was observed across the site from ground surface to a depth of 12 ft. A clay layer of unknown thickness or continuity was encountered beneath the fill material. This layer is presumed to be the former base of the Gowanus Canal. The effectiveness of this layer as a low-permeability barrier between the overlying fill and the underlying water-bearing zone located within the glacial deposits beneath the site is unknown. Based on the manmade coastline (rip-rap, pile sheeting), well gauging data and the generalized hydrogeological cross-sections, a horizontal and somewhat radial (north, northwest, west, southwest, south) pathway for groundwater flow exists. Depth to water beneath the site has ranged

from 2.0 ft to 9.0-ft bgs over the course of investigation.
 Groundwater beneath the site is minimally influenced by the tide.
 Groundwater flow is radial with a high point in the central part of
 the site.

Site Description: "Location - The Kings County Manufactured Gas Plant (MGP) site is comprised of two contiguous parcels of land located on the east bank of the Bay Ridge Channel of the Upper New York Bay in Brooklyn, Kings County. The parcels are identified as 5400 1st Avenue and 5600 1st Avenue. The site is on the west side of 1st Avenue, near 54th Street. Site Features - The site is currently used for commercial/industrial purposes with warehouse buildings, a fuel oil storage facility and a power-generating station. The area between the buildings and other infrastructure is paved. Current Zoning/Use - The site is currently active and is zoned for industrial use. The surrounding parcels are currently used for a combination of both commercial and industrial uses. Past Use of the Site - The former MGP operated from 1904 until 1951. By 1970 all former MGP structures had been removed except for four fuel oil tanks and one gas holder that was converted into a fuel oil tank. In 1976 three meat distribution buildings were added to the property, which still exist today. At this time the fuel oil tanks and a power generating station were being operated by Con Edison. There are numerous spills relating to this activity on the site. One of the results of these spills was the installation of recovery wells for the collection of light non-aqueous phase liquid (LNAPL). These wells are currently being sampled on an annual basis. Site Geology and Hydrogeology - Fill material was encountered up to approximately 18 feet below ground surface. Fill material consists of fine to coarse sand with some silt, brick, metal fragments, concrete, cobbles and some clay. Underlying the fill was glacial outwash, fine to coarse gravel. Bedrock in the area is expected to be approximately 225 feet below ground surface. Groundwater is found at depths of 8 to

K - KINGS COUNTY WORKS (Continued)

S110748428

25 feet below ground surface and is tidally influenced. The groundwater flow direction is to the west."

Env Problem: "Prior to Remediation- Based on previous investigations, there are both VOCs (BTEX) and SVOCs (PAHs) from numerous petroleum spills at the property, as well as from past MGP operations. These contaminants are present in both soil and groundwater. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) was reported at concentrations up to 155 parts per trillion (ppt), exceeding the 10 ppt screening level for groundwater. Individual PFAS exceeding the 100 ppt screening level included Perfluorobutanoic Acid (PFBA) at a concentration of 2,940 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations up to 3,521 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. "

Health Problem: "The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review. "

CHEMTURA 633 COURT STREET (Continued)

S113828311

Updated By: SMQUANDT

Site Description: "Location: The site is located at 633 Court Street, Kings County, Brooklyn, New York within the Red Hook Industrial area of Brooklyn. The Site is located northeast of the Court Street and Halleck Street intersection. The site is immediately bordered to the south by Halleck Street and a National Grid truck facility, to the north by a paper street (Sigourney Street) and a petroleum cartage and storage (trucking) company. To the east there is small vacant lot and a warehouse. A recreational park (Red Hook Smith Recreational Park) is located directly across Court Street to the west of the site. Additionally, an oil terminal that is currently owned by Buckeye Partners, L.P. is located approximately one block to the south of the site. Site Features: The entire site is completely developed and covered with two connected adjoining buildings. The building's foundations are slab on grade concrete and there are no basements. These buildings were formerly used by Chemtura's predecessor companies for chemical manufacturing and chemical laboratory operations. Current Zoning and Land Use: The site is currently active, and is zoned M3-1 for industrial use, however this zoning designation allows for certain commercial uses. Several tenants occupy the site including a wholesale food and food product supply warehouse and offices. The M3-1 does not allow for residential use at this site. The surrounding parcels are currently used for a combination of commercial, light industrial and utility right-of-ways. The park located to the west is zoned residential and is used exclusively for recreational purposes. The nearest residential structure is approximately one-half miles to the north. Past Use of the Site: In 1904 the site was owned by Barrett Manufacturing and was used for the manufacturing of tar paper. Barrett Manufacturing Company is a predecessor company to Honeywell International, Inc. Tar tanks, storage tanks, stills, a pitch shed and an oil house were located on-site. In the 1940s Doran Manganese Bronze Company, Inc. Foundry & Machine Shop occupied the site. In the 1940s to 1950s, Argus Chemical Laboratory, a predecessor company to Chemtura, purchased and operated the site. Argus Chemical Laboratory was subsequently purchased by Witco (also a predecessor company to Chemtura) in the early 1960s. Under Argus and Witco ownership, the plant produced metallic-organic soaps and salts, barium stearates, phosphites and epoxy plasticizers. During the 1950s and 1960s, aluminum paste was produced in a process on the roof of one of the buildings. This production ceased in the late 1950s to early 1960s and all plant operations were relocated to a parcel of land located to the southwest of the 688 Site. The laboratory and offices remained at the 633 Site until approximately 1990 when these functions were relocated to 688 Court Street. Site Geology and Hydrogeology: The Site is improved with impervious surfaces (concrete foundation of an active commercial building) which precluded extensive subsurface investigations. However, it is known that the Site and the surrounding area is reclaimed water front from what is now known as the Gowanus Canal. This historic fill material was observed from 0 to 12 ft below the ground surface (bgs). The fill material consisted primarily of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.). Underlying the fill materials, a silt-clay layer was encountered. This layer has a relatively low permeability and is believed to continue laterally across the site. This layer is gray in color and is believed to be about eight-feet thick. The Site is

Map ID

Site

Database(s)

EDR ID Number
EPA ID Number

CHEMTURA 633 COURT STREET (Continued)

S113828311

located approximately 400 feet west of the Gowanus Canal and ground water elevations ranges from approximately 3.5 to 6 feet bgs. Kings County lies within the Long Island aquifer system and overlies a sole-source aquifer. "

Env Problem: "Nature and Extent of Contamination: Based on investigations conducted to date, the primary contaminants of concern at the site include toluene, ethylbenzene, xylene, semi-volatile organic compounds (SVOCs)/polycyclic aromatic hydrocarbons (PAHs), phenol, and metals. Soil: The VOCs toluene, ethylbenzene and xylene are found in soil from the surface to the water table. Benzene is found at 13 parts per million (ppm) at the center of the site and at 15 ppm at southern boundary of the site. This contamination is above the groundwater protection soil cleanup objective (SCO) of 0.06 parts per million (ppm) for benzene. PAHs are found throughout site soil. Benzo(a)pyrene is found in concentrations up to 62 ppm which is above the protection of groundwater SCO of 22 ppm. Metals are found throughout site soil. Lead was as high as 618 ppm, barium was found up to 590 ppm, cadmium was found up to 340 ppm, arsenic was found as high as 14.6 ppm and mercury was found as high as 2.4 ppm. Groundwater: Toluene, ethylbenzene, xylene, naphthalene and benzene are found in groundwater at concentrations up to 240, 300, 530, 3,000 and 48 parts per billion (ppb), respectively which are all above the groundwater standards of 5, 5, 5, 10 and 1 ppb, respectively. SVOCs pyrene and naphthalene are found in groundwater at concentrations up to 200 and 6,400 ppb, respectively, which are above the groundwater guidance values of 50 and 10 ppb, respectively. Soil Vapor: Two rounds of sub-slab soil vapor sampling were performed. Based on the results DOH indicated that no further sampling or mitigation would be required."

Health Problem: "Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates soil vapor intrusion is not a concern for existing on-site buildings. An evaluation of the potential for soil vapor intrusion is recommended for any future on-site buildings. Surrounding properties are in various cleanup programs and the potential for soil vapor intrusion at those sites will be evaluated separately."

Classification: P
Region: 2
Acres: 0.290
HW Code: 224197
Record Add: 09/15/2014
Record Upd: 11/04/2020
Updated By: SMQUANDT

Site Description: "Location: The 182 Sigourney St. Site is a 0.87-acre site located in the Red Hook section of Brooklyn. The site consists of two parcels listed as Block 492, Lot 20 (628 Smith Street) and Block 492, Lot 15 (182 Sigourney Street) on NYC tax maps. The site is at the intersections of Halleck Street, Smith Street and Sigourney Streets. The site is approximately 200-300 feet west of the Gowanus Canal. Site Features: The site is current primarily covered with a multi-story brick building with courtyard parking accessible from Sigourney Street. Current Zoning and Land Use: The site is currently zoned and M-1 (industrial) and is actively used for commercial and industrial operations. Historical Use: The properties that make up this site were part of a large tar paper manufacturing facility. A 1904 Sanborn Insurance Map depicts coal tar products, asphalt tanks and various oil tanks (including a 14,000-gallon underground tank). The Sanborn Map indicates that this property was operated by Barrett Manufacturing Company. The facility extended from Court Street to the Gowanus Canal. Site Geology and Hydrogeology: Based on geological information at an adjacent site, the groundwater at this property is anticipated to be approximately 5 feet bgs. Groundwater flow is anticipated to flow toward the Gowanus Canal traveling east and/or southeast. Much of this area is reclaimed water front property with fill material anticipated to exist from 0 to 12 feet bgs. A gray colored, discontinuous clayey layer (former base of the Gowanus Canal) is also anticipated beneath the fill material with a thickness varying up to eight feet."

Env Problem: "Investigations at adjacent properties indicate tar-like source material, light non-aqueous phase liquid (LNAPL) and petroleum VOCs are present in the soil and at the soil/groundwater interface. Downgradient and to the east of this potential site is the Red Hook Smith Street Brownfield Cleanup Program (volunteer) site (C224163) where tar-like material, metals, VOCs and SVOCs were identified. West of this potential site is the 633 Court St. (Chemtura #224146) site and the Red Hook Smith Recreation Area; tar-like material has been identified in each of these locations. A portion of the Red Hook Smith Street BCP and the 633 Court Street (Chemtura) property were both previously part of the former Barrett Manufacturing property. To the south is a State Superfund P-site (224196) where tar boils have been identified on site, which was initially Mica Roofing Company. Investigation of this site is warranted."

Health Problem: "As information for this site becomes available, it will be reviewed"

Record Upd: 05/24/2013
Updated By: BXANDERS
Site Description: "See site C224163 Location: The 45,400 square foot site is located at 627-641 Smith Street in the Borough of Brooklyn, Kings County, NY in an urban area. Site Features: The Site currently consists of a vacant 1-story warehouse and an asphalt-paved parking lot. The site warehouse is connected to the warehouse on the lot to the south. Current Zoning/Use(s): The site is currently zoned as M3-1 (manufacturing). Historical Use(s): The Site was occupied by Barrett Manufacturing Company, Storage and Shipping in the early 1900s. Later, Colonial Sand and Stone Company occupied the site in the 1950s. Black Diamond Cargo Line and Pittston Stevedoring Storage occupied the Site from the early 1960's to the 1990s. The original occupant, Barrett Manufacturing, utilized nine coal tar storage tanks and two gasoline underground storage tanks (USTs) as part of their production of coal tar and roofing material. Additionally, Barrett Manufacturing operations occupied the entire city block west of the site (Block 492). Block 492 currently consists of three Lots: Lot 1, Lot 15, Lot 20. Block 492, Lot 1 is a State Superfund Site: Chemtura 633 Court Street ID No. 224146. Site Geology and Hydrogeology: Soil borings conducted between 2005 and 2012 indicate there are alternating layers of sand and dense clay. Two to four separate aquifers are present at the site, separated by clay confining layers. Groundwater is present at a depth of 2 ? 4 feet below grade."
Env Problem: "See site C224163 Nature and Extent of Contamination: Soil ? Coal tar related VOCs and SVOCs are present above Unrestricted Use SCOs. These include naphthalene (7,700 mg/kg), benzo(a)anthracene (280 mg/kg), benzo(a)pyrene (250 mg/kg), and benzo(b)fluoranthene (190 mg/kg). Contaminated soil is present on-site in the vicinity of the former tar storage tanks, and extends to the eastern property boundary, which is bordered by the Gowanus Canal. Additionally, the area of contaminated soil extends off-site to the south, and upgradient to the west. High soil VOCs and SVOCs upgradient and adjacent to Block 492 indicate that Block 492 may be a source of coal tar related VOCs and SVOCs. Groundwater ? VOCs and SVOCs are present above Class GA Standard in twenty monitoring wells. The groundwater plume has not been delineated to the south or to the west.VOC and SVOC contamination extends to the eastern property boundary, which is bordered by the Gowanus Canal. Napthalene is present at a concentration of up to 17,000 ug/l. Benzene is present at a maximum concentration of 11,000 ug/l. Toluene is present at a concentration of up to 7,300 ug/l. Soil Vapor ? Soil vapor samples have not been collected. Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental significant threat."

Record Added Date: 12/12/2012
Record Updated Date: 09/09/2021
Update By: SMQUANDT
Site Description: "Location: The 1.96-acre site is located in an urban area of Brooklyn. The site is bounded by Smith Street to the west, the Gowanus Canal to the east and south, and an industrial property to the north. Site Features: Two tax parcels comprise the site: Block 493, Lot 1 and Block 495, Lot 1. The site includes approximately 750-linear feet of waterfront along the Gowanus Canal at the mouth of the Gowanus Bay. The site was formerly developed with a one-story warehouse that was demolished in 2018, leaving the site vacant with asphalt and concrete surfaces. Current Zoning and Land Use(s): The site is zoned M-3, heavy manufacturing which also allows certain retail and commercial uses. Past Use of the Site: Barrett Manufacturing occupied Block 493 (northern area of the site) circa 1900 to 1940 and utilized nine coal tar storage tanks as part of their production of coal tar and roofing material. The facility also extended to the west of the site (hydraulically up-gradient). After Barrett Manufacturing sold the property in the 1950s, two gasoline

S112818546

underground storage tanks (USTs) were installed on the property. Various manufacturing and storage companies occupied Block 495 (southern part of the site) including: an ice company in the early 1900s; a dock and seaboard storage company from approximately 1930 to 1950; and a cargo line and storage company from the late 1960s to the 1990s. Site Geology and Hydrogeology: Site topography is relatively flat, gently sloping downward to the east-southeast towards the Gowanus Canal. The site is underlain by historic urban fill that extends to approximately 12 feet below grade surface (bgs). The historic fill generally consisted of sand, silt, clay, gravel, cobbles, with wood and brick fragments, cinder, and ash. A native clay lens containing some organic material was identified at varying depths (12 to 14 feet bgs). Native fine sand and silt were identified beneath the clay to a depth of 50-feet bgs. Bedrock was not encountered during this investigation. The depth to groundwater is approximately five feet below the ground surface and flows to the east-southeast towards the Gowanus Canal."

Env Problem:

"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater samples were also analyzed for per- and polyfluoroalkyl substances (PFAS). Soil vapor was analyzed for VOCs. The primary contaminants of concern are coal tar in soil and floating on the groundwater, SVOCs (total) and naphthalene in soil and naphthalene in groundwater. Soil: The primary soil contamination concern is the presence of coal tar and tar-like material across the site and to a maximum depth of 48 feet below ground surface (bgs). Grossly-impacted soils were observed in a soil boring, in both historic fill from 10-12 feet bgs and native material from 30 to 48 feet bgs, as well as a monitoring well boring from 6 to 27 feet bgs. In addition to the coal tar, SVOCs were detected to a depth of 5 to 6 feet bgs at levels exceeding commercial use soil cleanup objectives (CSCOs) and/or protection of groundwater soil cleanup objectives (PGWSCOs), where applicable, including: total SVOCs up to 18,518 parts per million (ppm), naphthalene up to 7,500 ppm (CSCO 500 ppm and PGWSCO 12 ppm), benzo(a)anthracene up to 31 ppb (CSCO 5.6 ppm), benzo(a)pyrene up to 74 ppm (CSCO 1 ppm), benzo(b)fluoranthene up to 71 ppm (CSCO 5.6 ppm and PGWSCO 1.7 ppm), and indeno(1,2,3-cd)pyrene up to 32 ppm (CSCO 5.6 ppm and PGWSCO 8.2 ppm). One VOC, 1,2,4-trimethylbenzene, was detected in two locations at 210 ppm and 270 ppm, above its CSCO of 190 ppm. Metals were detected at levels exceeding CSCOs to a depth of 6 feet bgs as follows: lead up to 15,000 ppm (CSCO 1,000 ppm) and copper up to 2,600 ppm (CSCO 270 ppm). No PCBs or pesticides were detected in soil above CSCOs. Site-related soil impacts may be migrating off-site. Groundwater: Coal tar was encountered beginning near the ground surface and extending well into groundwater, located at approximately 5 feet bgs, to a maximum depth of 47 feet bgs. VOCs detected above Class GA Ambient Water Quality Standard (AWQS) include: benzene up to 550 parts per billion (ppb) (AWQS is 1 ppb), ethylbenzene up to 1,400 ppb (AWQS is 5 ppb), toluene up to 1,500 ppb (AWQS is 5 ppb), total xylene up to 3,200 ppb (AWQS is 5 ppb), and 1,2,4-trimethylbenzene up to 41 ppb (AWQS 5 ppb).. The following SVOCs were detected above AWQS: naphthalene up to 13,000 ppb (AWQS is 10 ppb), phenol up to 200 ppb (AWQS is 1 ppb), acenaphthene up to 500 ppb (AWQS is 20 ppb), 2,4-dimethylphenol up to 1,100 ppb (AWQS is 50 ppb), anthracene up to 82 ppb (AWQS is 50 ppb), benzo(b)fluoranthene up to 0.3 ppb (AWQS is

S112818546

0.002 ppb), benzo(k)fluoranthene up to 0.17 ppb (AWQS is 0.002 ppb), bis(2-ethylhexyl)phthalate up to 7.2 ppb (AWQS is 5 ppb), chrysene up to 0.28 ppb (AWQS is 0.002 ppb), fluorene up to 260 ppb (AWQS is 50 ppb), indeno(1,2,3-cd) up to 0.17 ppb (AWQS is 0.002 ppb), and phenanthrene up to 190 ppb (AWQS is 50 ppb). For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations up to 126 parts per trillion (ppt) and 41.4 ppt, respectively, exceeding the Maximum Contaminant Level (MCL) (drinking water standard) of 10 ppt each in groundwater. There are no public water supply wells within a half a mile and there is a municipal prohibition for use of groundwater at the site. PCBs, metals, and pesticides were not detected above AWQS in site groundwater. Site-related groundwater impacts may be migrating off-site. Soil Vapor: Fifteen soil vapor samples were collected from approximately two feet bgs and analyzed for VOCs. Results detected benzene, toluene, ethylbenzene and xylene (BTEX) a across the site up to 1,304 micrograms per cubic meter (g/m3). The chlorinated VOC tetrachloroethene (PCE) was also detected up to 59.2 g/m3 but is not thought to be site related since PCE was not detected above standards in soil or groundwater at the site. The data do not indicate any off-site impacts in soil vapor related to this site."

Health Problem:

"Direct contact with contaminated soil is unlikely because the site is completely fenced, which restricts public access, and is covered by concrete. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil), may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern because there are no buildings on-site, however the potential for indoor air impacts via the soil vapor intrusion pathway exists for any future occupied buildings. Sampling indicates soil vapor intrusion is not a concern for off-site structures."

 Updated By: JHOCONNE

Site Description: "Location- The 4.17 acre site is located at 98 Lorraine Street in the Borough of Brooklyn, Kings County, NY in an urban area. Site Features - The Site currently consists of a portion of a public park (Red Hook Park) operated by the NYC Department of Parks and Recreation. This portion of the park contains 4 baseball fields (fields 5 through 8). Current Zoning and Land Use - The site is currently zoned as park land and is surrounded by other sections of Red Hook Park, as well as a large public housing development (Red Hook Houses). The site is bounded on the north by Lorraine Street and Red Hook Houses, to the east by Henry Street and Red Hook Park, to the south by Bay Street and Red Hook Park, and to the west by Hicks Street and multi-family residential buildings. Past Use of the Site - The site was occupied by a secondary lead smelter operated initially by Delevan Smelting and Refining Works and later by Columbia Smelting and Refining Works from at least 1929 to the late 1930s. By 1939 the smelting building was demolished. The site was redeveloped as part of Red Hook Park some time before 1947. Site Geology and Hydrogeology - Soil sampling has only been performed in the upper 2 feet of soil. Generally the soil consists of fill material. No groundwater samples were collected as part of the investigations to date; therefore depth to groundwater and groundwater flow direction are unknown. The nearest water body (Gowanus Bay) is located approximately 1200 feet to the southeast of the site."

Env Problem: "Nature and Extent of Contamination: In 2014, US EPA implemented an investigation in support of an emergency removal action. The data below is from the US EPA investigation. Soil In surface soil (0 to 1 below grade) the highest concentration of lead was 980 ppm as compared to the restricted residential soil cleanup objective (RRSCO) of 400 ppm. In the 1 to 6 interval, the highest concentration was 2400 ppm. At depth (6 to 24 below grade) the highest concentration was 5700 ppm on-site and 8300 ppm off-site to the south. Other metals including antimony, arsenic, iron, copper and tin were found in association with the lead. USEPA concluded that the ratios of the various metals to lead were indicative of the smelting process as opposed to exclusively being attributed to historic fill. Groundwater No groundwater samples have been collected. Soil Vapor No soil vapor

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMs by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City's Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

UST - WESTCHESTER: Listing of Storage Tanks

A listing of underground storage tank sites located in Westchester County.

Date of Government Version: 07/01/2021	Source: Westchester County Department of Health
Date Data Arrived at EDR: 08/06/2021	Telephone: 914-813-5161
Date Made Active in Reports: 08/20/2021	Last EDR Contact: 01/24/2022
Number of Days to Update: 14	Next Scheduled EDR Contact: 08/09/2022
	Data Release Frequency: Semi-Annually

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/23/2021	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 08/10/2021	Telephone: 860-424-3375

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

Target Property Map: 14317809 JERSEY CITY, NJ
Version Date: 2019

Northeast Map: 14115940 BROOKLYN, NY
Version Date: 2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
3604970192F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
3604970211F	FEMA FIRM Flood data
3604970073B	FEMA Q3 Flood data

3604970085B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
JERSEY CITY	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Cretaceous
Series: Upper Cretaceous
Code: uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Appendix C Qualifications of Environmental Professional

Megan Dascoli, CHMM
Senior Environmental Scientist

Areas of Expertise

Phase I Environmental Site Assessments
Environmental Due Diligence
Drilling Oversight/Management
Construction Management
Multi-media Environmental Sampling

Years of Experience

With AECOM/URS: 20 Years
With Other Firms: 0 Years

Education

BA/Environmental Science/Hampshire
College/2000

Certifications

AECOM Project Manager Training
Certified Hazardous Materials Manager
(CHMM)
OSHA 40-Hour Hazardous Waste Operations
(HAZWOPER)
OSHA HAZWOPER 8-Hour Refresher
Training
OSHA 8-Hour HAZWOPER Site Supervisor
OSHA 10-Hour Construction Industry
OSHA 4-Hour Confined Space Entry
Safety Trained Supervisor (STS)

Ms. Dascoli is a senior environmental scientist with a variety of environmental project field experience with assessment and remedial activities as well as project management experience, report writing, and coordination. She has performed Phase I site assessments in and around the New York metro area and Long Island. Ms. Dascoli has provided environmental oversight and monitoring at various urban construction sites. She has performed groundwater sampling and monitoring; groundwater and soil sample collection with direct push, hollow stem auger, air hammer; air rotary, mud rotary, and air quality testing at a variety of petroleum contaminated sites and former Manufactured Gas Plant (MGP) sites. Ms. Dascoli has worked on the environmental management team for the MTA's East Side Access Project working to maintain federal, state, and contractual standards for field implementation for environmental corrective and remedial actions.

Project Specific Experience

Due Diligence Experience

Build It Back, NYC Department of City Planning & NYC Housing Preservation and Development – Assistant Project Manager coordinating all phases of Phase I ESA submittals: performance, preparation, and review of Phase I ESAs. Management of team to complete reports and quality control reviews within determined budget and schedule. Conduct client contact and invoicing.

New York City Department of Environmental Protection – Conducted Phase I Environmental Site Assessments for aqueduct rehabilitation sites in Cornwall and Fishkill, NY. Provided drilling oversight while collecting soil and groundwater samples in Queens, NY. Prepared report summarizing findings.

7-Eleven, Phase I ESAs, Long Island, New York – Performance of Phase I site inspections at proposed gasoline stations and non-gasoline convenience stores.

Various Residential, Commercial, and Industrial Clients, Phase I and II ESAs, throughout New York City and Long Island, NY— Performance of Phase I and II ESAs at various residential, commercial, and industrial sites and preparation of Phase I and II ESA reports.

Site and Remedial Investigation Experience

Resource Environmental, LLC, (RELLC) Plainview, NY – Assistant Project Manager coordinating client and regulatory submittals, drilling, well maintenance, and groundwater sampling events. Writes and coordinates completion of status reports submitted to the client and regulator. Prepares work plans, waste disposal plans, and reports. Oversaw installation of monitoring wells for vertical and horizontal delineation investigation and collected soil and hydropunch samples.

JFK Airport, Queens, NY – Performed injections of sodium persulfate solution to remediate plumes of MTBE and BTEX in isolated areas. Conducted field oversight and management of a dual phase extraction remedial system operation and maintenance including compliance sampling.

NYCDDC and NYCT UST Program – Lead environmental scientist performing assessment oversight and remedial corrective action activities at multiple sites in the five boroughs. Work involves overseeing contractors utilizing a variety of drilling techniques to collect soil and groundwater samples for the purposes of UST spill closure and remedial activities.

Lockheed Martin Corp., North Shore Towers, Floral Park, NY – Field oversight for mud rotary drilling of a 440 ft bgs vertical profile boring for further delineation of the off-site part of a dissolved phase VOC plume. Performed Hydropunch sampling and geotechnical classification of the split spoon soil samples.

Manufactured Gas Plant Experience

National Grid, Former Manufactured Gas Plant (MGP) Site, Hempstead, NY – Assistant Project Manager responsible for project coordination, writing and compiling quarterly product recovery/groundwater sampling reports, and coordinating these field activities. Performed MGP product recovery and water level sweep bimonthly. Performed quarterly low-flow groundwater sampling. Oversaw the installation of injection wells and monitoring wells for two oxygen injection systems. Facilitated Community Air Monitoring Program (CAMP) during delineation drilling, performed oversight of drilling contractors while logging soil samples for characterization and MGP impacts as well as collecting soil and groundwater samples.

National Grid, Former MGP Site, Williamsburg, Brooklyn, NY – Oversaw and collected soil samples during initial drilling investigation and site-wide pre-remediation waste characterization sampling program. Wrote Standard Operating Procedure for and conducted MGP product recovery. Served as resident engineer during part of remediation construction operations including soil and holder tank excavation to 30 feet bgs and site restoration.

National Grid, Former MGP Site, Front Street, Brooklyn, NY – Conducted oversight for soil sampling and monitoring well installation using a Geoprobe and Sonic drill rig. Logged and sampled soil.

National Grid, Former MGP Site, Clifton, Staten Island, NY – Performed MGP product recovery and oversaw one soil sampling event.

Environmental Construction Management

NYSDEC, Garvies Point Waterfront Revitalization Project, Glen Cove, NY – Part of onsite team representing NYSDEC Division of Environmental Remediation, Region 1 at former State Superfund Site. Observed activities at five condominium and roadway construction sites.

Oversaw soil management for disposal and reuse, storm and process water management, and general activities for conformance to plans and regulations. Collected periodic soil and water samples.

East Side Access Project, Long Island City, NY – Performed daily field inspections on three contract sites to ensure contractor’s environmental compliance with Federal and State regulations, permits, and contract specifications. Conducted periodic Environmental Audits for three contracts as well as reviewing contractor environmental submittals on East Side Access project. Conducted monthly water quality sampling from frac tank and groundwater and well as daily and weekly monitoring for noise, vibration, dust, and groundwater. Managed Waste Tracking Database for four contracts.

Asbestos, Lead, & Building Material Inspections

Confidential Client – Performed environmental multi-media field surveys (including, asbestos, lead, PCBs, and mercury) and compiled site-specific reports for a wide variety of facilities.

207th St. Overhaul Shop and Yard, Manhattan, NY – Performed comprehensive asbestos survey field activities for a large facility, including both overhead and confined space entry work.

NYCTA Lead Program – Produced four reports on a weekly basis, engaged in heavy client contact, scheduled technicians, performed QA/QC, and tracked information on Hazardous Waste Storage Areas.

Dow Chemical Plant in Bound Brook, NJ – Performed lead paint field survey and assisted with asbestos survey. Organized and managed Dow Chemical lead and asbestos survey results in a database format.

1.0 INTRODUCTION

This report summarizes supplemental investigation activities completed by TRC Environmental Corporation (TRC) at the South Brooklyn Marine Terminal (SBMT) property located in the Sunset Park section of Brooklyn, New York (the subject site) on behalf of the site owner, the New York City Economic Development Corporation (NYCEDC). The scope of work was conducted in accordance with the Supplemental Environmental Site Investigation Work Plan prepared by TRC and dated December 2002 and included a geophysical survey at suspected underground storage tank (UST) locations, the subsequent advancement of test pits at geophysical anomalies, and the advancement of soil borings at previously identified areas of concern and proposed construction locations.

This report also presents information related to on-going environmental activities associated with the removal of underground and aboveground storage tanks from the property in 1998 and subsequent investigation, remedial and monitoring activities conducted for the New York City Department of Design and Construction (DDC) as part of their Upgrading, Replacement, or Decommissioning of Petroleum Product Storage Tanks Project on City-owned properties. The information related to this DDC project was not available to TRC when a Phase I Assessment of the SBMT was conducted by TRC in 2002.

2.0 BACKGROUND

The South Brooklyn Marine Terminal is a 110 acre facility located in the Sunset Park section of Brooklyn, New York. The property is situated between 29th and 39th Streets along Second Avenue and bound by New York Harbor to the northwest. The subject property is identified in the New York City Department of Buildings records as Block 662, Lot 1. Historically, the facility was an active marine terminal. Until recently, the terminal was utilized for the importation and distribution of cocoa beans. Several warehouses and vehicle storage and maintenance buildings were also located on the property until circa 1970. A site location map is provided as Figure 1. A site plan is provided as Figure 2.

Much of the facility is currently being utilized for the storage and distribution of new automobiles by several tenants, vehicle parking and as a vehicle impound lot by the New York City Police Department. Two large multi-story warehouse buildings the 39th Street Shed and N Shed are located on the northwest corner of the property. The 39th Street Shed is currently vacant while the N Shed is being utilized for impounded vehicle storage. An addition added onto the southern side of the N Shed is referred to as the maintenance shop and is currently being utilized by the NYCEDC. The 35th Street shed has recently been demolished as part of a pier rehabilitation project. A four acre rail yard operated by New York City Transit is located on the western side of the site. The rail yard currently sees little use. Abandoned truck scales and an associated building are located to the west of the rail yard. A small corrugated metal building used for vehicle preparation by an automobile dealer is located on the southwest side of the site. The last permanent building on the property is a multi-story structure situated in the center of the property known as the tower building. A second set of derelict truck scales abut the west side of the tower building. An unofficial street known as Marginal Way transects the center of the property in a northeast to southwest orientation. The property is enclosed by chain-link fencing and New York Harbor. Miles of chain-link fence also delineate the various tenant lots on the property.

2.1 Previous Investigations

2.1.1 DDC Petroleum Product Storage Tanks Project Reports

Ballard Engineering Consulting, PC (Ballard) under contract to the DDC conducted a pre-design investigation at the South Brooklyn Marine Terminal to evaluate the upgrading,

replacement or decommissioning of petroleum product storage tanks on the property. The scope of the investigation included: a records search of New York City Fire Department (NYFD) files, New York City Department of Buildings (DOB) files, New York State Department of Environmental Conservation (NYSDEC) files; a review of historic fire insurance Sanborn Maps; personnel interviews; an evaluation of relevant UST regulatory requirements; development and discussion of compliance alternatives; and recommendations for additional investigation activities to be conducted prior to initiating UST compliance activities. The findings of this investigation are summarized in a report entitled *Pre-design Investigation for Site #38 - Brooklyn Marine Terminal Foot of 29th to 39th Streets and Gowanus Bay Brooklyn, New York*, prepared by Ballard, dated October 13, 1997.

Pertinent pre-design investigation findings, conclusions and recommendations are summarized below:

- NYFD records revealed permits and designs for seven USTs on the SBMT property. Table 1 provided in Appendix A provides a summary of these tanks.
- DOB records revealed permits for the installation of twenty four (24) petroleum storage tanks between the foot of 29th and 39th streets. The DOB records did not include the USTs noted in the NYFD files. Table 2 in Appendix A provides a summary of these tanks.
- A site visit conducted by Ballard confirmed the existence of seven vent pipes for the seven known USTs as well as two additional vent pipes, one on the southern wall of the maintenance shop and one on the eastern end of the N Shed. The existence of eight aboveground storage tanks (ASTs) was noted during the site visit. The report did not specify the use of the ASTs. No evidence of the existence of the 24 tanks noted in the DOB files was observed by Ballard.
- Ballard recommended that all USTs, five out-of-service ASTs, and all associated piping be removed in accordance with pertinent regulations to bring the site into compliance with petroleum storage tank regulations. In addition Ballard, recommended that in use ASTs be equipped with secondary containment and that an environmental site assessment be performed at the tank locations.

Based on the investigation findings, the following tanks were removed: two 550-gallon gasoline USTs, one 4,000-gallon diesel UST, four 4,000-gallon gasoline USTs, one 550-gallon waste oil UST, one 1,000-gallon AST of unknown contents, and one 550-gallon fuel oil AST. In addition, four hydraulic lifts were removed from the property. Following the UST removals,

post-excavation soil sampling and testing were conducted. A geophysical investigation was also conducted at locations where the records search indicated possible USTs. The scope and findings of this investigation are summarized in a report entitled *Site Specific Investigation Plan Site #38 – Brooklyn Marine Terminal Foot of 29th to 39th Streets and Gowanus Bay Brooklyn, New York* prepared by Ballard, dated July 17, 1998.

Pertinent investigation findings, conclusions and recommendations are summarized below:

- This report documents the removal of the aforementioned UST's from the SBMT. A NYCFD affidavit of closure is provided in Appendix A.
- Post-excavation soil samples collected from three tank excavations were analyzed for volatile organic compound (VOCs) by EPA Method 8021, base/neutral extractables by EPA Method 8270 and total lead by EPA Method 6010. Figures showing the locations of these excavations and samples are provided in Appendix A. Analytical results indicated the presence of petroleum related VOCs, SVOCs and lead in numerous excavation sidewall and bottom soil samples. Detected concentrations of several VOCs and SVOCs exceeded Alternative Guidance Values (AGVs) established in NYSDEC *STARS Memo No. 1: Petroleum-Contaminated Soil Guidance Policy* dated August 1992. Detected lead concentrations exceeded the Recommended Soil Clean-up Objectives outlined in *Technical & Guidance Memorandum: Determination of Soil Clean-up Objectives and Clean-up Levels*, revised January, 1994. Analytical data-summary tables are provided in Appendix A.
- Results of the geophysical investigation (EM-61 electromagnetic survey) performed at eight suspected UST locations did not indicate the presence of additional USTs on the subject property. A site figure provided in Appendix A depicts the locations of the geophysical surveys.
- Additional work recommended by Ballard included the completion of thirteen soil borings and ground water monitoring wells in the vicinity of the three tank excavations, two rounds of ground water sampling and testing and well hydraulic testing.

In August through October 2000, URS Corporation Group Consultants, Inc. (URS) conducted a site-specific investigation that incorporated the components of the site-specific investigation plan (SSIP) prepared in 1998 by Ballard, NYSDEC comments on the SSIP, and modifications proposed by URS (additional soil sampling and chemical analyses). The revised SSIP was reviewed and approved by the NYSDEC in a letter dated April 20, 2002. A copy of

this letter is provided in Appendix A. The scope of the SSIP included the installation of four borings and fourteen monitoring wells, soil and ground water sampling and analyses and ground water elevation and floating product monitoring. The scope and findings of these activities are summarized in a report titled *Investigation Summary and Remedial Plan for the New York City Economic Development Corporation – Brooklyn Marine Terminal Foot of 29th to 39th Streets and Gowanus Bay Brooklyn, New York*, prepared by URS, dated April 2001. Report figures and data tables that summarize the results of this investigation are provided in Appendix A.

Pertinent investigation findings, conclusions and recommendations are summarized below:

- Site soils encountered during the investigation were described as a uniform fill consisting of a fine to medium sand, with trace silt and gravel and debris (brick, concrete, asphalt, cinders and ash). Based on well slug test results, the fill was reported as highly permeable with hydraulic conductivity ranges from approximately 3.4 ft/day to 65 ft/day.
- Ground water was observed at depths of approximately 7 to 8 feet below ground surface with a flow direction to the northeast towards Gowanus Bay (New York Harbor). Tidal influences to ground water flow were also noted.
- An area of 800 square feet of vadose zone soils with gasoline-related VOC impacts exceeding STARS TCLP Extraction Guidance Values was approximated at Area A located to the south of the western wing of the 39th Street Shed.
- Two discrete areas of soil contamination (gasoline-related VOCs exceeding STARS TCLP Extraction Guidance Values) were identified as Area B which is located next to the southwest corner of the N Shed. The combined areas include approximately 1,100 square feet of impacted soils to depths of approximately 6 ftbg. VOC impacts to ground water were also reported at concentrations in excess of NYSDEC ground water quality criteria in Area B.
- Soil boring data for Area C, which is located to the south of the N Shed, indicated the presence of a small area of shallow VOC soil contamination. Detected gasoline-related VOC concentrations exceeded STARS TCLP Extraction Guidance Values.
- Three areas of gasoline-related VOC soil impacts were reported as Area D, which is located next to the southeast corner of the N Shed. Observed VOC concentrations exceeded STARS TCLP Extraction Guidance Values. The areal extent of the soil impacts was not fully delineated.

- Based on a brief evaluation of potential remedial technologies that could be implemented at the site to address observed soil and ground water impacts, URS recommended excavation and off-site disposal of impacted vadose zone soils and dissolved oxygen elevation to expedite the in-situ natural biodegradation of ground water impacts. Limited additional investigations were also recommended to refine the extent of the vadose zone soil impacts.

The remedial plan was approved with comments by the NYCDEC in a letter dated August 7, 2001. A copy of this letter is provided in Appendix A.

In a letter from URS Corporation to NYSDEC dated October 5, 2001, URS proposed to conduct a pre-design investigation (PDI) to further evaluate the extent of contaminated soil in Areas A, B, C and D and to evaluate the extent of ground water impacts downgradient of ground water monitoring well MW-B-04. The proposed scope of work included the installation of 16 soil borings, soil field screening and soil sampling for chemical analyses. The scope also included the installation of five additional monitoring wells and subsequent ground water sampling. Figures depicting the proposed soil boring and monitoring well locations are provided in Appendix A.

In a letter dated November 25, 2002, URS presented the results of additional soil sampling conducted at the site in July 2002 to further delineate the extent of vadose zone soil contamination. A summary of the findings of the PDI investigation conducted in February 2002 was also presented. The findings of the PDI investigation showed no evidence of soil contamination when the sample data were compared to NYSDEC Technical and Administrative Guidance Memorandum (TAGM) No. 4046 recommended clean-up objectives. Previous soil analytical data had been compared to NYSDEC STARS Memo No. 1 toxicity characteristic leaching procedure (TCLP) guidance values. Six additional soil borings were completed and sampled by URS in July 2002 to further evaluate soil contamination at several areas where previous soil sampling results (TCLP analyses) showed exceedances of STARS Memo No. 1 TCLP criteria. Soil samples were analyzed for STARS list VOCs and naphthalene (EPA Method 8260) and results compares to TAGM 4046 guidelines. VOCs were not detected in any of the soil samples analyzed. Based on these results, URS recommended no further action for vadose zone soils in Areas A, B, C and D. The in-situ application of an oxygen releasing compound product to address residual ground water impacts in Areas B and D was also recommended.

Report figures and data tables that summarize the results of this investigation are provided in Appendix A.

In a letter dated May 19, 2003, URS presented the results of the additional soil sampling and quarterly ground water monitoring conducted at the site by URS in 2002. Pursuant to the request of the NYSDEC, an additional soil boring was advanced and soil samples collected to evaluate the existing soil contamination in the vicinity of former boring SB-C-01 where prior TCLP data exceeded STARS Memo No. 1 criteria. One VOC and naphthalene were detected in the soil samples and no further action was recommended for site soils. Results from the additional round of ground water monitoring in Areas B, C and D indicated only minor ground water contamination remained. Ground water analytical data from samples collected from monitoring wells MW-B-04 and MW-D-05 indicated residual VOCs and naphthalene above NYSDEC Ground Water Quality Criteria. URS recommended additional quarterly monitoring of these wells until contaminant levels in each well are below NYSDEC Ground Water Quality Criteria for two consecutive sampling events. The NYSDEC subsequently approved the revised remedial approach in a letter dated October 21, 2003. Figures and summary tables from this report and a copy of the approval letter are provided in Appendix A.

A report entitled *Quarterly Ground Water Monitoring Report, July – September 2003 for the New York City Department of Design and Construction, Underground Storage Tank Sites - 109th Precinct, Brooklyn Marine Terminal*, prepared by URS, dated October 2003 provides a summary of a quarterly ground water monitoring event conducted on August 28, 2003. Ground water analytical results indicated no contaminants were detected in the well MW-B-04 sample and gasoline-related VOCs in excess of NYSDEC Ground Water Quality Criteria were detected in the sample collected from well MW-D-05. Figures and data tables from this report are provided in Appendix A.

Information pertaining to a December 2003 quarterly ground water monitoring event conducted by URS Corporation at the SBMT was obtained by TRC from the NYSDEC in April 2004. Ground water sampling and testing results documented in this report indicated gasoline-related VOCs (ethyl benzene, xylenes, trimethylbenzenes, and naphthalene) in excess of NYSDEC Ground Water Quality Criteria were present in a sample collected from monitoring well MW-B-04. Trace gasoline-related VOCs detected in MW-D-05 did not exceed NYSDEC

Ground Water Quality Criteria. Figures and data tables from this report are provided in Appendix A.

2.1.2 TRC Site Assessments

Under contract to the NYSDEC, TRC Environmental Corporation (TRC) conducted a Phase I Environmental Site Assessment (ESA) of the South Brooklyn Marine Terminal (SBMT) in July 2002. A summary of the report findings and recommendations is provided below. The above summarized documentation on the prior tank and soil removals and related investigation activities was not discovered while conducting the Phase I. This documentation was discovered by TRC during the preparation of this report.

The SBMT is currently used mostly for the storage of new automobiles and secure automobile impounding by the New York City Police Department (NYPD). As shown on Figure 2, structures on-site consist of the 39th and 35th Street Sheds, the Tower Building (occupied by the NYPD), and the "N" Shed. An 8-track rail siding operated by New York City Transit is also located on the southern portion of the subject property. Based on TRC's background research and visual inspection of the subject property on July 15, 2002, the significant findings of TRC's Phase I ESA are as follows:

Through a review of historical Sanborn Maps, TRC determined that four 160,000-gallon oil/diesel oil aboveground storage tanks, a diesel oil filling station with associated underground storage tanks (USTs), and numerous UST gasoline tanks had been located in various areas of the subject property as early as 1951. However, no information was available to TRC regarding the current status of these tanks.

Based upon the above-described concerns, the following recommendations were made by TRC in the Phase I report:

- As required by applicable state and federal petroleum regulations, USTs no longer in use must be permanently closed in accordance with applicable regulations. Closure of USTs requires soil sampling and testing, as per NYSDEC guidance, to confirm no impacts to soil conditions, or if warranted, to verify completeness of any prior soil and/or ground water remediation efforts.
- The potential for additional on-site USTs other than the above-mentioned USTs exists. Therefore, a geophysical survey and/or test pits was recommended to further assess the presence of USTs at the site.

- If site development warrants an understanding of soil and ground water conditions prior to construction, a subsurface investigation should be performed to identify and delineate areas of petroleum contaminated soil and/or ground water. TRC collected soil samples for chemical testing during a site geotechnical investigation in July 2002 and conducted a Phase II subsurface soil investigation on July 31, 2002.

Significant findings of TRC's Phase II environmental site assessment are presented in a TRC report dated September 2002 and are summarized below:

- Volatile organic compounds (VOCs) were detected in two of eighteen soil samples (includes one duplicate) analyzed for VOCs at concentrations exceeding NYSDEC TAGM 4046 soil guidelines. PAHs were detected in samples from seven of eighteen locations at concentrations exceeding NYSDEC TAGM 4046 guidance values. Metals were detected in fourteen of eighteen soil samples at concentrations exceeding NYSDEC TAGM 4046 soil guidelines. PCBs were detected in two samples at levels below TAGM soil guidelines.
- The site is almost completely covered by either asphalt and/or concrete, therefore the detected levels of contaminants in the underlying soils would not likely pose a significant concern to site occupants unless disturbed or exposed by site development activities.
- The TCLP PAHs data showed non-detect levels of PAHs in soil sample leachate indicating those soils do not present a significant potential risk to site ground water.
- Subsurface soil samples collected at sample locations B-17, B-20, and B-22 exhibited a petroleum-like nuisance odor as described by STARS Memo No. 1 nuisance characteristics. In addition, there were no other signs of potential petroleum impacts (e.g., soil staining, oil sheen). Laboratory results indicated no significant soil contamination at these locations. The likely cause for the nuisance odor was the urban fill intermixed with site soils consisting of cinders, slag and miscellaneous construction and demolition debris.
- The laboratory data for soil samples collected in the vicinity of several former on-site petroleum storage tanks, as determined by historical Sanborn maps, exceeded NYSDEC soil guidance values. The soil samples from several of these locations were also observed to have signs of petroleum impacts (e.g., staining, and/or odors). The soil samples collected in the vicinity of the former set of four 160,000-gallon diesel oil ASTs, located in western portion of the site at the N Shed, had observed petroleum impacts and contained VOCs, PAHs, and metals levels exceeding NYSDEC TAGM 4046 soil guidelines.

Based upon the findings of the Phase I and Phase II environmental assessment, TRC recommended the following:

1. A site-specific Health & Safety Plan should be developed and implemented during construction to minimize exposure by workers and the general public to the urban fill comprising the site soils.
2. The characterization of any excess soils generated during construction to ensure the materials are properly disposed or reused/recycled offsite.
3. The provision of adequate personal protection should be provided to site construction workers exposed to the fill and excavated soils/fill generated during site development.
4. Geophysical surveys in those open areas of the site where USTs are suspected based on historical Sanborn maps. The exact former tank locations are unknown and geophysical surveys in the suspected historical tank locations may prove useful in locating the tanks or remaining tank appurtenances. Based on the geophysical survey findings, test pit excavations may be completed at detected anomalies to assess the presence of USTs and any associated soil impacts. Any discovered tanks or soil impacts may require follow-up soil investigations, ground water investigations and/or soil removals.
5. Completing several soil borings within and/or around the "N" Building in the immediate area of the former 160,000-gallon ASTs. Boring location B-17 was designated for this area initially; however, access to the building was not available during the sampling event. This location was moved approximately 300 feet southwest to the nearby outer perimeter of the building and centrally located along the southwest wall. The soil sample collected from the B-17 location exhibited no exceedances of soil guidance values for VOCs or metals (no total PAH analysis), although a strong petroleum-like odor was detected in the soils from this boring from depths of 0 to 12-feet below grade.
6. Completing several soil borings around prior boring location B-10, which is located approximately 600 feet south of the former 160,000-gallon AST quartet and exhibited the highest concentrations of petroleum-related VOCs. The soil from 8.5 to 10.5-feet below grade at B-10 was also observed to have signs of petroleum impacts. The closest boring to B-10 is the B-21 location approximately 250 feet due east. The soil sample collected from the B-21 location and the other nearby B-17 location exhibited no exceedances of soil guidance values for VOCs.

3.0 FIELD INVESTIGATIONS

The following section provides descriptions of the supplemental geophysical survey investigation, test pit investigation and soil boring program performed by TRC in August 2003.

3.1 Geophysical Investigation

Bucks Geophysical Corporation of Plumsteadville, PA, under contract to TRC, conducted a geophysical survey at the SBMT on August 6, 2003. The survey was completed at five locations on the subject property where historic Sanborn maps indicated the prior existence of buried gasoline tanks (see Figure 2). The geophysical techniques employed included an electromagnetic terrain conductivity survey using a Geonics EM-61 instrument and magnetometer survey using a GEM Systems GSM-196 magnetometer.

A 50-foot by 50-foot area was cleared at each of the five locations and geophysical surveys conducted along five-foot spaced, northwest-southeast trending transverses. EM values were logged at one-foot intervals along each transverse and magnetometer data were recorded at 0.5-second time intervals (approximately equal to 2 foot distance intervals) while the operator walked along each transverse. Following the completion of the field surveys at each location, preliminary mapping and interpretation of the data was conducted in the field to identify the locations of any magnetic or conductive anomalies. These anomalies were then marked out in the field for test pit investigation. The location of each geophysical survey area is shown on Figure 2.

3.2 Test Pit Investigation

Based on the results of the geophysical survey, ten test pits were excavated at the five survey areas (designated Areas A through E) by American Environmental Assessment Corporation, of Wyandanch, New York under the direction of TRC on August 7, 2003. The location of each test pit within the five areas is shown on Figure 2. A summary of the geophysical anomalies and test pit details is provided as Table 1. Test pit logs describing the observed conditions are presented in Appendix B.

3.3 Soil Boring Program

3.3.1 Soil Borings

Twelve direct-push soil borings were advanced at the site to further assess the characteristics of the fill and soil beneath the site. The borings were completed in areas previously identified as areas of potential concern and at locations where proposed site development are expected to uncover/disturb subsurface soils. Borings B-27 and B-28 were advanced next to historic and active electrical transformer buildings. Borings B-29 through B-32 were advanced within the footprint of proposed buildings where subsurface soils will be disturbed. Borings B-33 and B-34 were advanced adjacent to prior boring B-10 where petroleum impacts to subsurface soil were discovered. Borings B-35 through B-38 were advanced inside the 37th Street shed (N Shed) where historic Sanborn Maps indicate the prior presence of petroleum storage and fueling areas. Boring locations are shown on Figure 2. Boring logs are provided in Appendix B.

Soil borings were advanced by Aquifer Drilling and Testing, Inc., of New Hyde Park, NY using direct push drilling technology under the direction of TRC. A cement coring machine was utilized to drill through the surface asphalt and concrete at each location prior to advancing the soil borings. Soil samples were collected continuously beginning at grade by driving 1-3/8" diameter steel rods fitted with a four-foot long Macro-Core[®] (MC) sampler to depths ranging from 2 to 12-feet below grade (ftbg). Each MC sampler was fitted with a new disposable acetate liner to ensure sample integrity. Following sample collection, each boring was backfilled with excess cutting and allowed to collapse naturally. Each boring was capped with asphalt or concrete at the surface as appropriate. At locations where soil borings were advanced below the inferred water table the boring was packed with hydrated bentonite chips to approximately two feet above the water table. Upon retrieval of the MC samplers, soils were characterized, logged and field screened for organic vapors with a photoionization detector (PID) equipped with a 10.6 eV ionization lamp and calibrated to an isobutylene standard. Field screening results of the soil samples are presented on the boring logs.

3.3.2 Soil Sampling and Laboratory Analyses

A shallow soil sample was collected from each soil boring immediately below the asphalt/concrete and associated subbase materials. Subsurface soil samples were collected from

soil borings B-35 and B-38 at the ground water interface where field observations and PID screening indicated the presence of potential petroleum impacts. Soil samples were submitted to Chemtech Laboratory of Mountainside, New Jersey under chain of custody (COC) documentation for the following analyses:

- Target Compound List (TCL) volatile organic compounds (VOCs) by EPA Method 8260;
- TCL semi-volatile organic compounds (SVOCs) by EPA Method 8270; and
- Target Analyte List (TAL) metals by EPA Methods 6010/7471.

The two soil samples from borings B-27 and B-28 completed proximate to a former and active electrical transformer building, respectively, were also analyzed for polychlorinated biphenyls (PCBs) by EPA Method 8082.

3.4 Land Survey

Site-Blauvelt of New York City performed land surveying activities at the site on November 2003 for TRC. Each supplemental site investigation location (e.g. geophysical survey area, test pit and soil boring) were surveyed for location and elevation.

4.0 RESULTS AND FINDINGS

The following section provides a discussion of the results and findings of the supplemental geophysical survey investigation, test pit investigation and soil boring program. Soil sample analytical data is compared to New York State Department of Environmental Conservation (NYSDEC) TAGM Soil Clean-up Guidelines.

4.1 Geophysical Survey Results

A total of eleven anomalous areas were identified within the five survey areas during the geophysical surveys. The initial interpretation of the data included six unknown anomalies, two inferred as buried metal, three inferred underground utility lines or pipes and an inferred foundation wall. A summary of the geophysical anomalies and test pit findings is provided as Table 1. The geophysical survey report is provided as Appendix C.

4.2 Test Pit Investigation Results

Ten test pits were excavated at five survey areas (areas where Sanborn Maps indicated the prior existence of USTs) to explore identified geophysical anomalies. The location of each test pit in these areas is shown on Figure 2. A summary of the geophysical anomalies and test pits is provided as Table 1. Test pit logs are presented in Appendix B. In summary, no evidence of USTs, former UST vaults or appurtenances was observed at any of the survey areas. What was interpreted as a large concrete building floor slab was encountered at Area A. Underground utilities, a steel beam set in concrete at a depth of 3.5-ftbg, and a large concrete slab were observed at Area B. Another large concrete slab and a brick and concrete building foundation were encountered at Area C. Large concrete slabs were also observed at Areas D and E. The thickness of the concrete slabs prohibited further excavation below the slabs at most of the test pit locations. However, no piping penetrations or openings were observed in the slabs indicative of an underlying tank. Field screening results presented on the test pit logs did not indicate the presence of organic vapors at locations where test pits were advanced below asphalt and concrete. Based on the observed site conditions, no soil samples were collected for chemical testing during the test pit program.

4.3 Soil Boring and Soil Sampling Results

4.3.1 Soil Conditions

Soil borings indicated a varied soil profile throughout the site. In general, soils encountered during this boring program consisted of fine sands with varying percentages of gravel, silts and clay. Debris including crushed brick and concrete, slag, cinders, metal and glass were observed in the soils at many locations. All boring locations were covered with as much as 1.5-feet of concrete and/or asphalt except for boring B-32, advanced within the rail yard, where ballast was encountered. Petroleum-like odors were noted in borings B-35 through B-38 that were advanced inside the N Shed.

4.3.2 Organic Vapor Screening

As presented on the soil boring logs, field screening results indicate the presence of elevated organic vapors in soils at borings B-35 through B-38. These borings were completed inside the N Shed at locations where bulk oil storage ASTs were formerly located.

4.3.3 Soil Sampling Results

Volatile Organic Compounds

Low levels of toluene from 5.8 to 20 micrograms per kilogram ($\mu\text{g}/\text{Kg}$) were detected in four soil samples (B-33, B-35, B-38 (1-5), B-38 (8-9)) collected from soil borings located beneath and to the west of the N Shed. Toluene was also detected in nine soil samples at concentrations below the method detection limit. Low levels of m/p xylenes ($6 \mu\text{g}/\text{Kg}$) and methylene chloride ($6.2 \mu\text{g}/\text{Kg}$) were detected in soil samples B-33 and B-38 (1'-5'), respectively. Ethyl benzene, xylenes and methylene chloride were also detected in 13 of 14 soil samples at concentrations below method detection limits. Detected and estimated VOC concentrations did not exceed applicable NYSDEC TAGM 4046 recommended soil clean-up objectives (RSCOs). A summary of soil sample analytical data is provided as Table 2.

Semivolatile Organic Compounds

Detectable concentrations of up to twelve individual SVOCs were reported in soil samples B-31, B-32, B-34, B-35 (1-3), B-35 (5-8), B-38 (1-5), B-38 (8-9). Benzo(a)anthracene concentrations exceeded TAGM RSCOs in five soils samples. Chrysene concentrations

exceeded TAGM RSCOs in four soil samples. Benzo(a)pyrene concentrations exceeded TAGM RSCOs in three soil samples. Several other SVOCs were also detected in soil samples at concentrations below method detection limits (estimated values). Several estimated SVOC concentrations exceeded applicable TAGM RSCOs. A summary of soil sample analytical data is provided as Table 2.

Metals

Twenty of twenty three target analyte list (TAL) metals were detected at concentrations above method detection limits in numerous soil samples collected at the site. Metals were also detected in numerous soil samples at concentrations below method detection limits (estimated values). Notable results are discussed below:

- Arsenic was detected at a concentration of 154 milligrams per kilograms (mg/Kg) in soil sample B-32 collected in the railroad yard. This concentration exceeds TAGM RSCOs and is well above New York State (NYS) background concentrations reported in TAGM 4046. Arsenic concentrations detected in soil samples B-28, B-35 (1-3), B-35 (5-8) and B-38 (1-5) also exceed TAGM RSCOs.
- Estimated beryllium concentrations in 12 of 14 soil samples exceeded TAGM RSCOs. Estimated concentrations were within Eastern US background concentrations reported in TAGM 4046.
- Chromium concentrations in 7 of 14 soil samples exceeded TAGM RSCOs but were within NYS background concentrations reported in TAGM 4046.
- Copper concentrations in 8 of 14 soil samples exceeded TAGM RSCOs. Six samples exceeded TAGM Eastern US background concentrations.
- Lead was detected in soil sample B-27 at 1,900 mg/kg. This concentration is above the lead concentrations detected in the other 13 soil samples collected at the site and TAGM Eastern US background concentrations.
- Mercury concentrations detected in 10 of 14 soil samples exceeded TAGM RSCOs. Six samples exceeded TAGM Eastern US background concentrations.
- Nickel concentrations detected in 10 of 14 soil samples exceeded TAGM RSCOs. The nickel concentration in soil sample B-31 exceeded the Eastern US background concentration for nickel reported in TAGM 4046.

- Zinc was detected in all 14 soil samples at concentrations above TAGM RSCOs. Zinc concentrations in 11 samples also exceeded TAGM Eastern US Background concentrations. A summary of soil sample analytical data is provided as Table 2.

PCBs

PCBs were detected in soil sample B-27 at a concentration of 0.014 mg/Kg, well below the TAGM RSCO of 1.0 mg/kg for PCBs in surface soils. A summary of soil sample analytical data is provided as Table 2.

5.0 SUMMARY AND RECOMMENDATIONS

TRC reviewed several reports obtained by TRC from the NYCDDC and reports on file at the NYSDEC. These reports document the excavation and removal of eight USTs, two ASTs and four hydraulic lifts from the SBMT property in 1998. Post excavation soil confirmation sampling indicates the existence of petroleum impacts in soil samples collected from the three tank graves located proximate to the 39th Street shed and N Shed. Subsequent assessment activities included the installation of numerous ground water monitoring wells and soil boring to delineate the extent of soil and ground water impacts. Soil analytical results from these activities indicate the presence of several gasoline related VOCs in soils in the vicinity of the former tank locations at concentrations below NYSDEC TAGM 4046 guidance values. Detected PAHs detected in soils from these areas were attributed to the urban fill present at the site. A no further action recommendation for site soils was approved by the NYSDEC in a letter dated October 21, 2003 (see Appendix A).

The 2002 ground water sampling results indicated the existence of gasoline related VOCs in ground water samples collected from two wells in excess of NYSDEC ground water quality criteria. An August 2003 ground water monitoring event (see Appendix A) indicated VOCs were not detected in monitoring well MW-B-04, and continued reduction of VOCs was observed in monitoring well MW-D-05. A December 2003 monitoring event (see Appendix A) indicated gasoline-related VOCs were not detected above NYSDEC Ground Water Quality Criteria in MW-D-05. However, several gasoline-related VOCs (ethyl benzene, xylenes, trimethylbenzenes, and naphthalene) detected in a sample collected from MW-B-04 exceeded the criteria. Additional monitoring is reportedly being conducted until NYSDEC Ground Water Quality Criteria are achieved for two consecutive monitoring events.

During this investigation TRC observed several vent and fill pipes located next to an abandoned building and truck scales located proximate to the rail yard south east of the 39th Street shed. The presence of these UST appurtenances suggests the existence of several petroleum USTs at this location.

Based on field observations and the results of a geophysical investigation and subsequent test pit investigation conducted at five suspected UST locations, no evidence of the USTs was found. USTs were also not found during a 1998 geophysical investigation conducted by another consultant at similar and additional areas of the site.

Four soil borings were sampled within the N Shed in the suspected area of four former 160,000-gallon ASTs. Four shallow and two subsurface samples from the borings (B-35 (1'-3'), B-35 (5'-8'), B-36 (1'-4'), B-37(1'-4'), B-38 (1'-5'), B-38 (8'-9')) exhibited petroleum-like impacts, described by the STARS nuisance characteristic guidance. Several petroleum-related PAHs and metals were detected in these samples above TAGM Recommended Cleanup Objectives.

Two soil borings (B-33 and B-34) were installed around prior TRC soil boring B-10 where elevated VOC concentrations were observed in a soil sample collected at a depth of 8.5'-10.5' below grade. Organic vapor screening of soil samples collected from these soil borings at depths above the inferred ground water table (8-ftbg) did not indicate the presence of significant organic vapors or signs of petroleum impacts (staining or odors). The chemical testing results of two shallow soil samples indicated the presence of several petroleum related PAHs and metals at concentrations above TAGM Recommended Cleanup Objectives. Low levels of VOCs detected in these samples were well below TAGM Recommended Soil Cleanup Objectives.

Arsenic was detected (154 mg/kg) in soil sample B-32 which was collected from shallow soils within the rail yard. This reported concentration is well above TAGM Recommended Soil Cleanup Objectives and arsenic concentrations detected in other soil samples collected throughout the site. Furthermore, elevated arsenic levels in shallow soils and railroad ballast in rail yards is common due to chemical leaching of preserved railroad ties.

Zinc was detected in all 12 shallow soil samples and two subsurface soil samples collected throughout the site at concentrations above the TAGM Recommended Soil Cleanup Objectives. Based on the wide distribution of these soil samples across the site, the elevated zinc soil concentrations may be representative of general background zinc concentrations in the fill materials.

Based on the above findings, TRC recommends the following:

- Obtain any new quarterly ground water monitoring data from NYSDEC.
- Confirm the presence and status of petroleum USTs at the abandoned truck scale building proximate to the rail yard and remove inactive petroleum tanks in accordance with all applicable Federal, State and City regulations.
- Install several ground water monitoring wells in and around the N Shed and conduct ground water sampling and chemical testing of the new and selected existing

ground water monitoring wells to investigate ground water quality in this portion of the site.

- Collect additional soil samples from within the rail yard to further assess arsenic levels in shallow soils in this area. However, if this area will remain an active rail yard, the need for this sampling should be reevaluated.
- Plan and implement adequate safety precautions during future site development activities or utility repair activities to protect workers from unacceptable exposures to contaminants in soils and dusts and to assure proper testing, handling and, if appropriate, off site treatment/disposal of excavated excess soils or fill materials.

NOTES:
 (ftg) - feet below grade
 NA - Not Analyzed
 NE = None Established
 Bold sample concentration indicates value exceeds guidance or criteria.
 D - indicates all compounds identified in an analysis at a secondary dilution factor.
 P - indicates that there is a >25% difference for detected concentrations between the two GC columns. The lower of the two values is reported.
 * - B-40 is field duplicate of B-38 (1-4)
 ** - New York State background
 *** - surface/subsurface soil
 **** - Background concentrations for lead very widely. Average levels in undeveloped rural areas may range from 4-61 ppm. Average background levels in metropolitan or suburban areas or near highways are much higher and typically range from 200 - 500 ppm.
 <160 U - indicates the compound was analyzed for but not detected at the reported detection limit.
 J - indicates an estimated value when the mass spectra data indicated the identification, however the result was less than the specified detection limit greater than zero.
 N - Presumptive evidence of a compound

Prepared For:

NEW YORK CITY DEPARTMENT OF DESIGN AND CONSTRUCTION (DDC)
Division of Structures
Transportation Program Unit

DDC Project Name:

Upgrading, Replacement, or Decommissioning of Petroleum Product Storage Tanks

Project #: PW348-05

Contract #: 9454727

PRE-DESIGN INVESTIGATION

for

Site #38 - Brooklyn Marine Terminal
Foot of 29th to 39th Streets and Gowanus Bay
Brooklyn, New York

October 13, 1997

The three 4,000-gallon USTs located on the south side of the maintenance shop were installed in 1979 (Area B, Figure 3). These USTs were originally designed to store gasoline. These USTs all passed the initial tightness tests in 1979. There are no records regarding the 10-year tightness test for these three USTs.

The aforementioned USTs found in the NYCFD records are summarized in the table below.

No. of Tanks	Capacity (gallons)	Product Stored	Year of Installation	Location					Address
				UST	AST	Inside	Outside	Area	
2	550	Gasoline	1964	X			X	A	Foot of 39 th St.
2	4,000	Diesel	1973	X			X	D	Foot of 39 th St.
3	4,000	Gasoline	1979	X			X	B	Foot of 39 th St.

The most recent record in the file was a NYCFD Violation Order issued to the NYC Economic Development Corporation in 1992 requesting that the owner seal the remaining five USTs. The NYCFD records did not indicate if this was ever done.

3.1.2 New York City Department of Buildings (DOB)

The DOB records for Block 662, Lot 1 indicated that the property extended from 29th Street in the north to 39th Street in the south and from Gowanus Bay in the west to Second Avenue in the east. The operations at the properties involved mainly consisted of shipping companies and train yards.

The review of the records from the DOB revealed permits for the installation of 24 petroleum storage tanks between the foot of 29th and 35th Streets. These tanks ranged in capacity from 550 gallons to 28,000 gallons. The DOB records do not include the USTs described in the NYCFD records. Following is a table summarizing the petroleum storage tanks described in the DOB records and the corresponding areas on Figure 3. A copy of the tank records are provided in Appendix B.

Table 2: DOB Records Search Results Summary*

No. of Tanks	Capacity (gallons)	Product Stored	Year of Installation	Location					Address
				UST	AST	Inside	Outside	Area	
1	550	Gasoline	1935					L	472/490 2 nd Ave.
2	550	Gasoline	1935	X				K	Foot of 29 th St.**
1	3,000	Fuel Oil	1929	X			X	I	NWC 2nd Ave. & 32 nd St.
6	4,000	Lube Oil	1946		X	X		G	1 st Ave. Bet. 33 rd & 35 th
1	5,000	Fuel Oil	1936					H	NWC 2 nd Ave. & 35 th St.
1	15,000	Fuel Oil	1929					I	512/532 2 nd Ave.
12	28,000	Fuel Oil	1946		X	X		G	1 st Ave. Bet. 33 rd & 35 th

*The lines with no information indicates that there is no record

**Also evidence of oil/water separator

3.1.3 New York State Department of Environmental Conservation (NYSDEC)

Information regarding petroleum bulk storage (PBS) records and spills have not yet been received.

3.1.4 Sanborn Maps

Historical Sanborn Maps for this site were obtained from 1888, 1906, 1926, 1951, 1978, 1980, 1991, 1992, 1993 and 1995. A review of these maps for areas of petroleum bulk storage was performed.

In the southern end of the site, between 39th and 38th Streets, there was a petroleum bulk storage area owned by the New York City Transit System shown only on the 1951 map. This bulk storage area included a diesel filling station, four 160,000 gallon above ground storage tanks, two for diesel fuel and two for fuel oil including concrete retaining walls surrounding each tank. To the west of the bulk storage area are two fenced areas, one for steel drums and another for oil storage. To the southwest of this bulk storage area along the New York Bay (also referred to as the Gowanus Bay) was the New York Fire Engine Company No.223 which had an oil room. There was additional oil storage to the west of the bulk facility. The bulk storage area and the New York Fire Engine Company have since been removed and correspond to the current location of the north wing of the 39th Street Pier Shed.

To the east of this oil storage area was a bus garage where two gasoline tanks were apparently located (Area E, Figure 3). Also to the east of the bulk facility there was a gasoline tank associated with a facility owned by Moore McCormack Lines, apparently not used by 1951 according to the Sanborn Map (Area F, Figure 3). A copy of the 1951 Sanborn Map is provided in Appendix C.

ATTN: Inspector Lenny Goldman
Bulk Fuel Safety Unit

RE: Brooklyn Marine Terminal
39th Street & 1st Avenue
Brooklyn, NY

Dear Inspector Goldman:

This letter is to confirm that on March 18 through March 23, 1998 the Larry E. Tyree Co., Inc. (License #62071006) properly removed 5 - 4000 gallon and 3 - 550 gallon underground fuel storage tanks at the above referenced site in accordance with the New York State Department of Conservation (NYSDEC) Petroleum Bulk Storage regulatory guidelines, 6NYCRR Part 613.9(b). All volatile liquids were pumped from the tanks. Next the tanks were purged of explosive vapors as well as the lines and all openings sealed. Vent risers were removed. The tanks were subsequently scrapped and sent to a scrap recycling facility.

If you have any further questions concerning this matter, feel free to contact this office.

Sincerely,

William M. Tyree
Larry E. Tyree Co., Inc.

Sworn to before me this rd 3 day of April 1998.

**Re: Site Specific Investigation Plan
Brooklyn Marine Terminal
29th-39th Streets & Gowanus Bay
Brooklyn, New York**

Dear Ms. Taherzadeh:

The Department has reviewed a revised Site Specific Investigation Plan (SSIP) for the above-referenced site, submitted in February 2000 by URS Greiner Woodward Clyde (URSGWC) for Kirkyla & Remeza, Inc. The plan incorporates an earlier SSIP prepared by Ballard Engineering Consulting, P.C. in July 1998 and approved with modifications by DEC in the same month, and includes several additional modifications proposed by URSGWC.

URSGWC's modifications include installation of an additional monitoring well in Area A, analysis of two soil samples from each well/boring by the TCLP extraction method, analysis of one soil sample from each boring in Area D for PCBs, and performance of slug testing on six monitoring wells.

The plan is approved. Please notify the Department in writing of the planned start date for this fieldwork. Feel free to contact me if you have any questions.

Sincerely,

Jonathan Kolleeny
Engineering Geologist I

Long Island City, NY 11101

**Re: Investigation Summary and Remedial Plan
Brooklyn Marine Terminal
29th-39th Streets & Gowanus Bay
Brooklyn, New York**

Dear Ms. Samani:

The Department has reviewed the ISRP for the above-referenced site, submitted in April 2001 by URS Corporation (URS), the design consultant to Kirkyla & Remeza, Inc. The report summarizes investigative activities at four separate tank areas on the site (Areas A, B, C, and D), concluding that there is vadose zone soil contamination in all four areas and dissolved-phase groundwater contamination in one area (Area B).

URS recommends excavation and off-site disposal of contaminated soil in all four areas, and application of oxygen release compound (ORC[®]) to address the dissolved-phase groundwater contamination in Area B. The report also states that additional investigations will be required to better delineate the extent of soil contamination in Areas B, C and D.

The remedial plan is approved, with the following comment:

- The Department recommends additional investigation in Area A to delineate soil contamination to the south, east and west of MW-A-01, which had very high levels of several petroleum-related compounds in the TCLP extract from one soil sample and which is located relatively far from the former UST locations in Area A.

Please notify the Department in writing prior to performing any fieldwork at the site, and advise us of any changes in the fieldwork schedule. Feel free to contact me if you have any questions.

Sincerely,

Jonathan Kolleeny
Engineering Geologist I
Division of Environmental Remediation

**RE: NYCDDC UST Program
Pre-Design Investigation Plan
Brooklyn Marine Terminal
Brooklyn, New York**

Dear Mr. Kolleeny:

URS Corporation (URS), on behalf of Kirkyla and Remeza, Inc., will perform a pre-design investigation (PDI) at the Brooklyn Marine Terminal (Figure 1). The purpose of the PDI is to determine the extent of petroleum contaminated soil and groundwater at the site and provide data to support remedial design.

Site Background

The Brooklyn Marine Terminal is located at the foot of 29th to 39th Streets and Gowanus Bay in Brooklyn, New York. The site is currently owned by the New York City Economic Development Corporation and is identified on the NYC Department of Buildings Tax Map as Block 662, Lot 1. A majority of the site is paved with asphalt or occupied by concrete buildings (Figure 2). The following structures are currently located at the site:

- several warehouses;
- a maintenance shop used for vehicle repair;
- numerous slips and piers for the docking and unloading of cargo ships;
- the South Brooklyn Railway Yard, which currently has one track in operation;
- the Tower Building, which currently houses a police Scuba Unit; and
- a Department of Sanitation Building.

Ballard Engineering Consulting, P.C. (Ballard), acting as a design subconsultant to Valid Construction Services, Inc., prepared a Site Specific Investigation Plan (SSIP) dated July 17, 1998. The SSIP detailed the results of an environmental assessment performed by Ballard following the excavation and/or removal of underground storage tanks (USTs) and above ground storage tanks (ASTs) by the Tyree Organization, Ltd. (Tyree). As part of the SSIP, Ballard identified and proposed additional investigative work in four areas of the site, designated as Areas A through D (Figure 2). Petroleum product storage tanks and ancillary components formerly located in these areas are summarized below and shown on Figures 3 and 4. Closure soil sample locations are also shown on Figures 3 and 4.

**RE: NYCDDC UST Program
Contract PW 348-23
Results of Field Investigation
NYC Development Corporation
Brooklyn Marine Terminal**

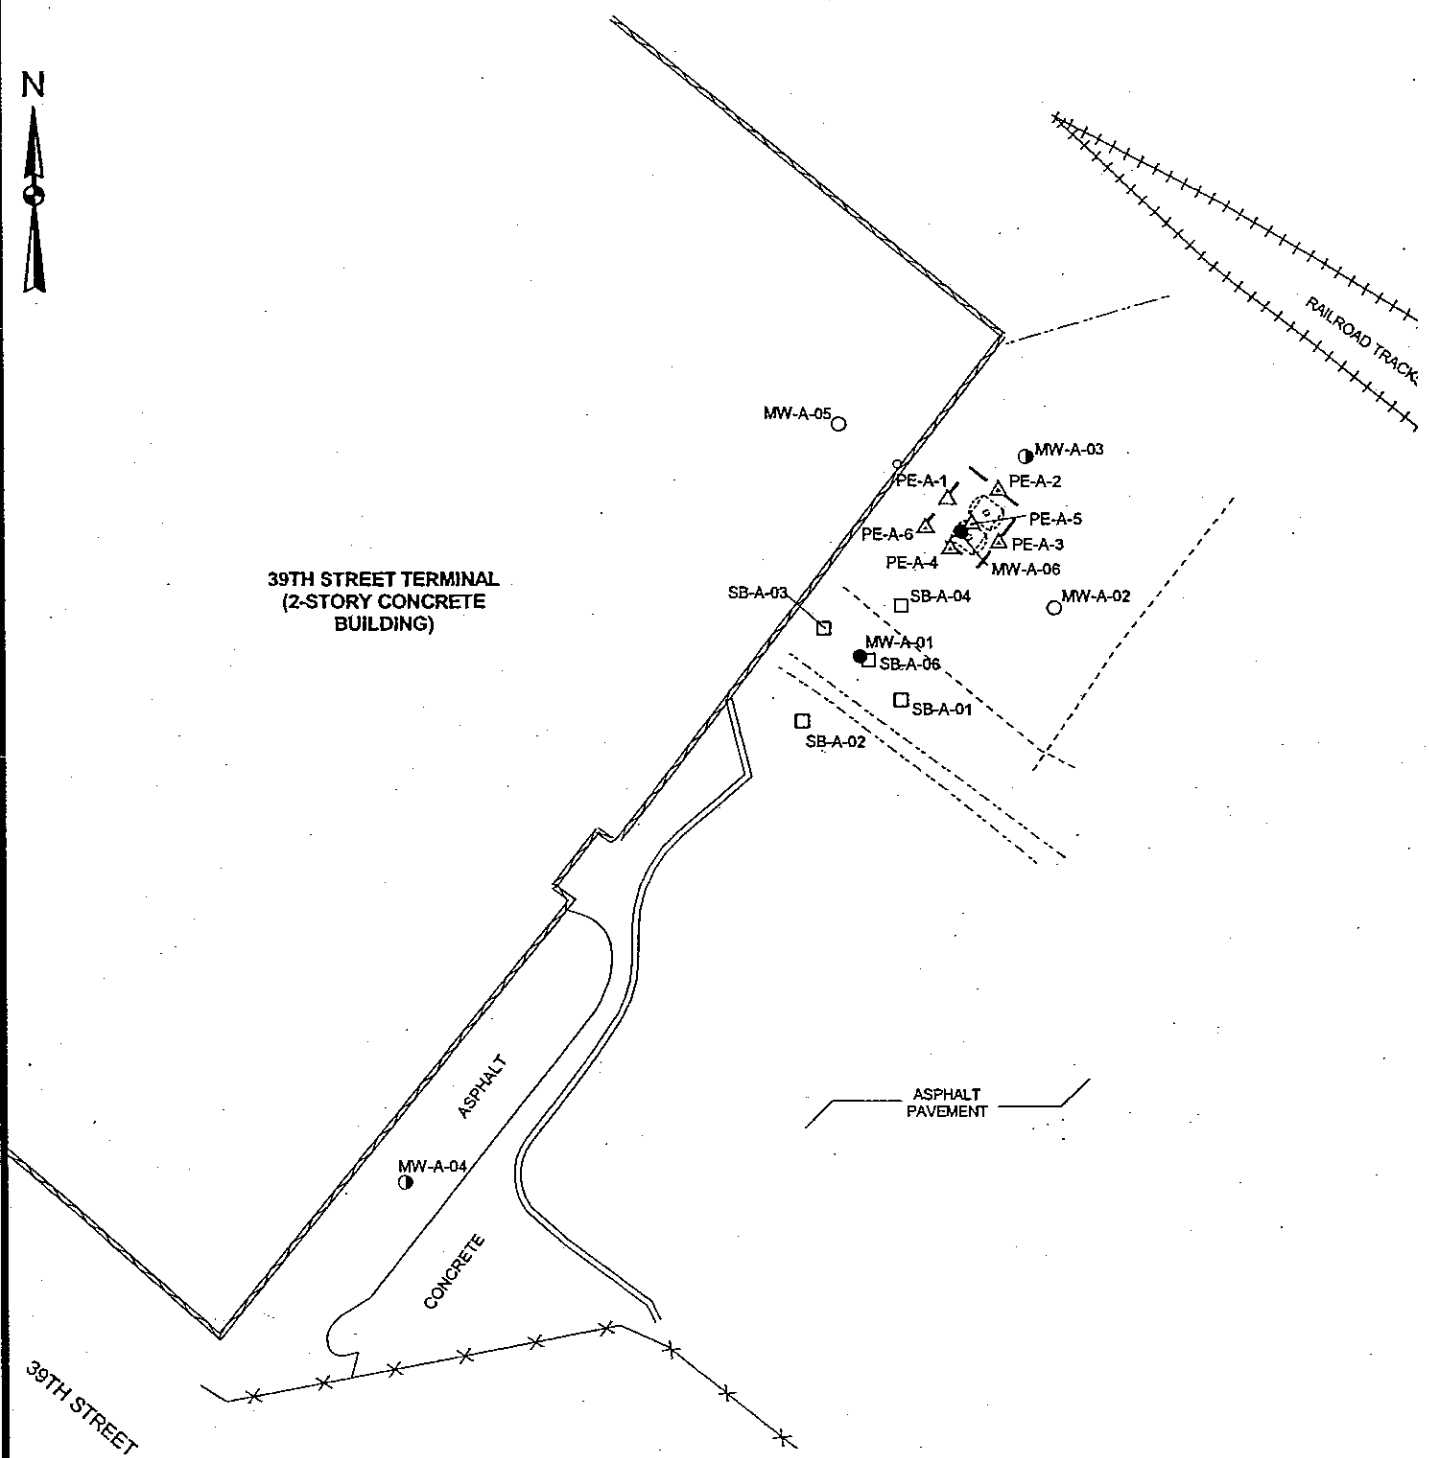

Dear Mr. Kolleeny:

This letter presents the results of the latest field investigation performed by URS Corporation (URS) at the Brooklyn Marine Terminal (Figure 1). The scope of the investigation, presented in our letter to the New York State Department of Environmental Conservation (NYSDEC) dated June 27, 2002, included the advancement of six soil borings to better delineate the areas of vadose zone soil contamination. Based on the analytical results of this investigation, URS recommends no further action for vadose zone soil contamination at the site. The application of oxygen releasing compounds (ORC) remains the best alternative to treat dissolved phase groundwater contamination. URS recommends the placement of ORC socks into existing monitoring wells. Details are presented below.

This is the second field investigation performed by URS at this site over the past year. The first investigation was completed in February 2002 and was intended to refine the volume of soil to be excavated; however, the soil analytical data showed no evidence of contamination. A review of available data indicated that the soil contamination detected in 1998 and 2000 may have biodegraded or may not be considered contaminated when re-sampled, submitted for totals analysis, and the results compared to the Technical and Administrative Guidance Memorandum (TAGM) #4046 clean-up criteria. Previous data was compared to the NYSDEC's STARS Memo #1 toxicity characteristic leaching procedure (TCLP) guidance values because the samples were analyzed by TCLP.

On July 16, 2002 and August 19, 2002, URS advanced six soil borings: SB-A-06 in Area A, SB-B-08 in Area B, SB-C-05 in Area C, and SB-D-06, SB-D-07, and SB-D-08 in Area D. The boring locations are shown on Figures 2, 3, and 4. The borings were advanced to approximately one foot into the water table or nine feet below ground surface (bgs). As a precaution, a post-hole digger was used to advance the borings the first five feet. A two-foot split-spoon sampler was used the remaining length of the borehole. The entire borehole was screened for volatile organic compounds (VOCs) using a photoionization detector (PID). One soil sample was collected from each borehole from a depth of 5 to 7 feet bgs; an additional soil sample was collected from SB-D-06 at 7 to 9 feet bgs. The samples were analyzed for NYSDEC STARS VOCs and naphthalene using U.S.

**RE: NYCDDC UST Program
Contract PW 348-23
Brooklyn Marine Terminal
Recommendation for No Further Action for Soil and for Groundwater Monitoring**

Dear Mr. Kolleeny:

This letter presents the results of the latest drilling and groundwater events performed by URS Corporation (URS) at the Brooklyn Marine Terminal (Figure 1). Based on the latest analytical data, URS recommends no further action for soil and groundwater monitoring.

In correspondence dated November 25, 2002, URS recommended no further action for vadose zone soil at the site. In response, the New York State Department of Environmental Conservation (NYSDEC) requested that an additional boring be placed as close as possible to former boring SB-C-01. Boring SB-C-01 was advanced in August 2000 and exhibited exceedances of the NYSDEC Toxicity Characteristic Leaching Procedure (TCLP) guidance values for several volatile organic compounds (VOCs) at 2 to 4 feet below ground surface (bgs).

Therefore, on January 17, 2003, URS advanced boring SB-C-06 to a depth of 12 feet bgs using a Geoprobe at the location shown on Figure 2. Continuous 4-foot macro-core samples were collected as the boring was advanced, and the samples from 4 to 8 feet bgs and 9 to 10 feet bgs were submitted for laboratory analysis for NYSDEC STARS VOCs and naphthalene using United States Environmental Protection Agency (USEPA) Method 8021B. The boring log is included as an attachment to this letter.

The analytical data, presented on Table 1, show that both samples from SB-C-06 were non-detect for VOCs and naphthalene. Based on this soil latest data, URS again recommends no further action for soil at the site.

On February 24 and 27, 2003, URS collected groundwater samples from monitoring wells MW-B-02, MW-B-03, MW-B-04, MW-C-01, MW-D-01, MW-D-03, MW-D-04, and MW-D-05. Monitoring wells MW-B-01 and MW-D-02 were scheduled to be sampled but they could not be located. The groundwater samples were analyzed for NYSDEC STARS VOCs and semi-volatile organic compounds (SVOCs) using USEPA Methods 8021B and 8270C, respectively.

The analytical results, presented on Table 2, show that only minor contamination remains at the site. Groundwater in wells MW-B-04 and MW-D-05 exhibited several VOCs and naphthalene above

Re: Recommendation of No Further Action for Soil
and for Groundwater Monitoring
Brooklyn Marine Terminal
29th-39th Streets & Gowanus Bay
Brooklyn, New York

Dear Ms. Samani:

The Department has reviewed the document *Recommendation of No Further Action for Soil and for Groundwater Monitoring* pertaining to the above-referenced site, submitted in May 2003 by URS Corporation (URS). Management of this site has been transferred from Kirkyla & Remeza, Inc. to O'Brien-Kreitzberg Associates, Inc.

The report summarizes the results of recent soil and groundwater sampling at the site. The new soil data, together with earlier soil data presented in the URS report *Results of Field Investigation*, dated November 25, 2002, suggest that no significant soil contamination remains at the site. The recent groundwater results show that minor levels of groundwater contamination remain in only two on-site wells, and that the levels in those wells show a decreasing trend. Accordingly, URS now recommends no further action for soil at the site, and quarterly monitoring of groundwater conditions. This is a change from their earlier remedial proposal, which involved soil excavation and application of oxygen release compound.

The revised remedial recommendations are approved. Feel free to contact me if you have any questions.

Sincerely,

Jonathan Kolleeny
Engineering Geologist I
Division of Environmental Remediation

3.6 Brooklyn Marine Terminal

3.6.1 Site Description

The Brooklyn Marine Terminal is located at 39th Street & Gowanus Bay, Brooklyn, New York. As approved by the NYSDEC, monitoring wells MW-B-04 and MW-D-05 were included in the quarterly groundwater monitoring program.

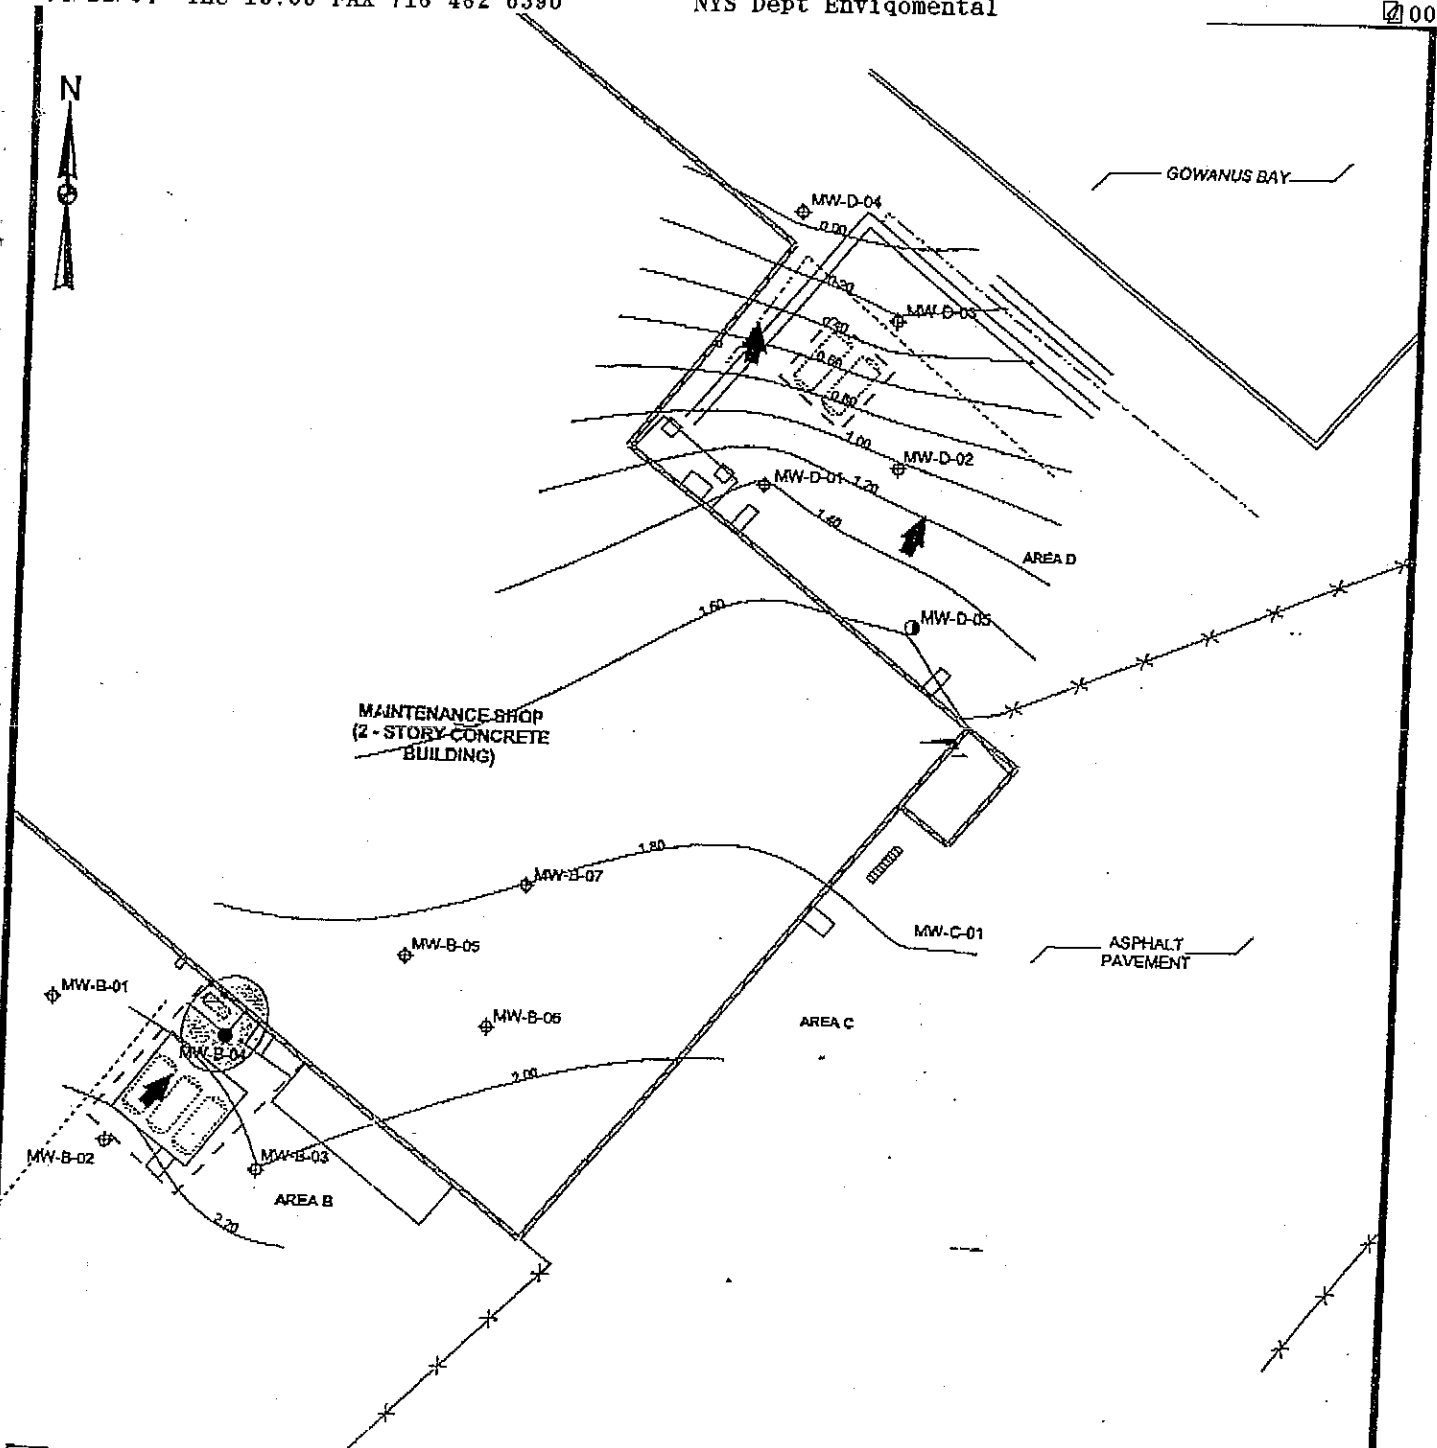

3.6.2 Goal of Monitoring Program

The goal of the groundwater monitoring program is to evaluate groundwater quality at the site. Groundwater samples are collected on a quarterly basis until the monitoring wells exhibit two consecutive rounds with no exceedances of the NYSDEC Groundwater Quality Criteria.

3.6.3 Summary of Results

On December 31, 2003, groundwater samples were collected from monitoring wells MW-B-04 and MW-D-05. However, due to the fact that a sample was not collected from MW-B-04 for SVOC analysis, URS returned to the site on January 8, 2004. The analytical results showed that minor exceedances of the NYSDEC Groundwater Quality Criteria were detected in the groundwater sample collected from monitoring well MW-B-04. No criteria were exceeded in well MW-D-05 (Table 3.6-1). The dissolved phase groundwater contamination plumes for December 2003 and August 2003 are shown on Figures 3.6-1 and 3.6-2, respectively.

Table 3.6-2 presents the water elevations in the wells currently included in the monitoring program. Free product has not been detected at the site (Table 3.6-2).

* - NYSDEC Groundwater Criteria, TOGS 1.1.1 "Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations", June 1998 (updated April 2000).
Concentration exceeds criteria.

R - Rejected Value.

(b)RES.LOGDATE Between #1/1/03# And #1/6/04#

J - Estimated concentration detected below the quantitation limit, or due to quality control outliers.

ND - Not Detected. Not Detected. Quantitation limit is an estimate due to quality control outliers.

D - Concentration reported from a secondary dilution analysis.

NA - Sample not analyzed for this analyte.

B - Compound detected in associated method blank.

** Naphthalene can be analyzed as both a volatile and semivolatile compound. The maximum detected concentration from either test is reported under the semivolatile section.

REPORT: GEOPHYSICAL INVESTIGATION
South Brooklyn Marine Terminal
Brooklyn, NY

Dear Mr. Bachand:

We are pleased to present our report of the geophysical investigation for the South Brooklyn Marine Terminal property in Brooklyn, NY. The investigation was performed on August 8, 2003.

If you have any questions concerning this report please contact us at 215-345-7193. We look forward to working with you in the future.

Respectfully submitted,
BUCKS GEOPHYSICAL CORPORATION

Matthew J. McMillen
Geophysicist

1) INTRODUCTION AND PURPOSE

The South Brooklyn Marine Terminal property in Brooklyn, NY was the location of this geophysical survey. The survey was conducted on five areas of the property that was accessible to the geophysical instrumentation. Figures 1, 5, 9, 13, and 17 show the locations of all survey lines and extent of the geophysical coverage.

The purpose of this geophysical survey was to locate underground storage tanks, pipes and utilities, and to investigate subsurface conditions. Electromagnetic terrain conductivity (EM - 61) and magnetometry (MAG) were employed for the survey. Brief descriptions of each technique are given in Appendix A.

2) REFERENCE GRID

A reference grid was established to accurately locate the geophysical stations using a 300-foot measuring tape and paint. The survey lines were spaced 5 feet apart and were marked every 5 feet or 25 feet. Figures 1, 5, 9, 13, and 17 shows the locations of the survey lines and the extent of the geophysical coverage.

3) GEOPHYSICAL METHODOLOGY

3a) Electromagnetic Survey

Electromagnetic data were also gathered using a Geonics EM-61 high sensitivity metal detector which obtains data to an effective depth of approximately 6 feet.

Data were recorded on a Model 600 digital recorder. Both top and bottom coil readings (mV), along with the line number, and station location were recorded at each station. Field observations were noted in a field book. EM-61 data were collected at .25 second intervals (Approximately every 1.25 feet.) along survey lines spaced 5 feet apart. The data was downloaded to a laptop computer for processing and generation of a contour map.

3c) Magnetic Survey

Magnetic data were collected using a GEM Systems GSM-19G magnetometer. Magnetic data were collected at 5 foot intervals along survey lines spaced 5 feet apart. Data was downloaded to a laptop computer for processing and generation of a magnetic contour map.

4) INTERPRETATION

AREA A

The geophysical investigation of this area detected an anomalous area and a possible pipe or utility.

The anomalous area detected by the survey is located at approximately 1+15N to 1+23N, 1+19E to 1+29E. The cause of this area is unknown. Figure 2 shows the location of this area.

See Figure 3 for the location of the possible pipe or utility detected by the survey.

AREA B

The geophysical survey of this area detected three anomalous areas. These areas are located at approximately;

- 1) 1+00N to 1+20N, 1+00E to 1+10E
- 2) 1+18N to 1+28N, 1+17E to 1+24E
- 3) 1+06N to 1+50N, 1+16E to 1+50E.

The cause of the first area may be buried metal. The cause of the second area is unknown. The third area may be associated with possible utilities in this area. Figure 6 shows the locations of these anomalous areas.

AREA C

The geophysical survey of Area C detected three anomalous areas, a possible large pipe, and an area which may be a concrete slab or foundation wall.

The three anomalous areas detected by the survey are located at approximately;

- 1) 1+15N to 1+24N, 1+00E to 1+10E
- 2) 1+31N to 1+38N, 1+07E to 1+14E
- 3) 1+30N to 1+37N, 1+23E to 1+37E

The cause of the first area may be buried metal. The cause of the second and third areas is unknown. Figure 10 shows the locations of these areas.

Figure 10 shows the location of the possible pipe that crosses the survey area in the north south direction.

An EM high on the southern portion of the survey area may be a reinforced concrete slab or a foundation wall or pipe.

AREA D

The geophysical survey of this area detected two anomalous areas. These areas are located at approximately;

- 1) 1+30N to 1+37N, 1+00E to 1+06E
- 2) 1+20N to 1+25N, 1+30E to 1+45E

The cause of the first area is unknown. The cause of the second area may be pipe. Figure 14 shows the location of this area.

AREA E

Three anomalous areas and an area of high magnetic values were detected by the survey of this area.

The three anomalous areas were detected at approximately;

- 1) 1+30N to 1+45N, 1+00E to 1+30E
- 2) 1+26N to 1+34N, 1+37E to 1+45E
- 3) 1+12N to 1+22N, 1+40E to 1+49E

The cause of these areas is unknown. Figure 18 shows the locations of these areas.

A magnetic high was detected by the survey at approximately 1+16N to 1+23N, 1+20E to 1+28E. This area may be buried metal such as a manhole cover. Figure 18 shows the location of this area.

5) CONCLUSIONS and RECOMMENDATIONS

The geophysical investigation of five areas of the South Brooklyn Marine Terminal property in Brooklyn, NY detected numerous anomalous areas, several possible pipes or utilities, a magnetic high, and an area which may be reinforced concrete, a pipe, or a foundation wall.

Further investigation of the anomalous areas and the magnetic high detected in Area E, using other means is recommended to determine the exact cause of each area. Figure 2, 6, 10, 14, and 18 show the locations of these areas.

Figure 2, 6, 10, 14, and 18 show the locations of all anomalies or areas detected by the geophysical survey.

## APPENDIX A

## MAGNETOMETER

A magnetometer is a rapid, effective and nondestructive instrument used to locate buried ferrous material (drums, pipes, mineral deposits, archaeological objects, etc.). The instrument is operated and carried by one person, and contains a digital memory for data storage.

The proton magnetometer utilizes the precession of spinning protons to measure the intensity of the earth's magnetic field. The protons act as small magnetic dipoles. A coil is charged with an electrical current which creates a magnetic field, which temporarily aligns the protons with respect to the coil. The current is then removed, and the protons spin in the direction of the earth's magnetic field. As the protons spin they generate a small electrical signal, which is measured and converted into a value of magnetic intensity (gammas) by the magnetometer. The intensity of the earth's magnetic field is affected by ferrous material.

Interpretation of magnetometer data includes recognizing and characterizing local changes in the intensity of the earth's magnetic field. Analysis usually involves contouring and profiling the data. The size, shape, and magnitude of an anomaly depends on the mass, orientation and depth of the buried target (drums, mineral deposits, etc.). Modeling of the data can provide a rough estimate of the mass and depth of the target, but is usually reserved for large-scale geological surveys.

Several factors can limit the effectiveness of the magnetometry method including the proximity of cultural interferences (such as buildings, fences and reinforced concrete), and the size, depth and magnetic susceptibility of the target.

## ELECTROMAGNETICS (EM-61)

The EM-61 is a high sensitivity, high resolution, time domain metal detector using the principles of electromagnetic induction. The EM-61 is portable, rapid, and nondestructive. It has a backpack transmitter and two receiver coils, which are mounted on a harness or wheels, so that handling and data gathering is easily achieved by one operator.

The time domain method involves measuring the response of the ground to an induced electromagnetic field. The EM-61 transmitter generates a pulsed electromagnetic field which induces eddy currents in nearby metallic objects. The decay of these eddy currents is measured by the two receiver coils. The results are recorded on the data logger as two channel information. The EM-61 data is recorded in millivolts ( mV ).

The EM-61 is most sensitive to metallic objects directly below the coils which allows for precise locations of individual metal objects. The approximate depth of investigation for this instrument is 6 feet below ground surface.

## **1.0 INTRODUCTION**

This Groundwater Sampling Report (Report), prepared by Henningson, Durham & Richardson Architecture and Engineering, P.C. (HDR), summarizes the groundwater sampling activities that were conducted on behalf of the New York City Economic Development Corporation (NYCEDC) at the South Brooklyn Marine Terminal (SBMT) located in Brooklyn, New York (site). Figure 1 shows a plan view of the site.

### **1.1 Purpose**

Infrastructure improvements will be made to the SBMT to accommodate lessees. The infrastructure improvements will likely require for the contractor to come in contact with groundwater and have to dewater. The New York State Department of Environmental Conservation (NYSDEC) is requiring the submission of analytical sampling results of water from the site from a certified laboratory using United States Environmental Protection Agency (USEPA) approved methods. The analytical sampling results provided in this Report will be reviewed by the NYSDEC to determine if groundwater removed from the site can be pumped from excavation trenches into a nearby storm sewer for disposal. The storm drain system available during dewatering is depicted in Figure 2.

### **1.2 Work Plan**

HDR submitted a Work Plan (Work Plan) for the groundwater sampling activities to the NYSDEC for review on May 8, 2007. The Work Plan outlined the proposed sampling plan (including temporary groundwater monitoring well locations and field sampling procedures) to be followed during the field sampling activities. The NYSDEC provided HDR with comments on the Work Plan on June 11, 2007. HDR provided the NYSDEC with a final Work Plan, on June 19, 2007, revised to address NYSDEC comments.

## 2.0 SITE INFORMATION

### 2.1 Site Description

The site is located from the 29<sup>th</sup> Street to 39<sup>th</sup> Street piers, adjacent to the Gowanus Bay and the Bay Ridge Federal Navigation Channel, Upper New York Bay, New York Harbor and extends to 2<sup>nd</sup> Avenue.

NYCEDC is leasing the majority of SBMT to the Axis Corporation. Axis will be operating an auto terminal on site, and will sublet space to a general stevedore. The SBMT facility was once a container terminal and was closed during the 1980's.

TRC Environmental Corporation performed a Phase I Environmental Site Assessment of the SBMT in 2002. The following information related to the site and its history is based on the Phase I Environmental Site Assessment Report, dated August 2002, prepared for the NYCEDC by TRC Environmental Corporation:

- The site is used mostly for storage of new automobiles and automobile impounding for the New York City Police Department (NYPD).
- The site is on Block 662 Lot 1 and is designated as an M3-1: Heavy Manufacturing District
- Structures on the site include: street sheds on 39<sup>th</sup> street and 35<sup>th</sup> street consisting of 1-2-story warehouse buildings, a 2-4 tower building occupied by the NYPD and a 1-2 story "N" warehouse building.
- The site is surrounded by Consolidated Edison – Gowanus Generating Station to the north, warehouse, industrial and manufacturing buildings to the south, U.S. Federal Bureau Prison, warehouse, industrial and manufacturing buildings and Costco to the East and New York Bay to the west.
- The site has been used in the past for residential dwellings, commercial buildings (stores) and offices, lumber and coal storage, warehouse buildings, a paper pulp mill shredding plant, parking garages, machine shops, sheds, railroad tracks, a fire station, a ferry terminal, paint shops, the New York City Transit System, bus garages, gasoline and oil storage, and cargo storage.
- Historical Sanborn Maps depict that four 160,000 gallon oil/diesel oil aboveground storage tanks (ASTs), a diesel oil filling station with associated underground storage tanks (USTs), and numerous UST gasoline tanks were located on the site since 1951. The NYCEDC is looking into the status of these tanks.

In order to identify known locations of reported spills in the area of the SBMT, Environmental Data Resources, Inc. (EDR), a commercial environmental data retrieval service, conducted a database search for HDR. The databases include various Federal and State records regarding USTs, leaking tanks, spills, hazardous waste generators, etc. Databases are searched based on prescribed ASTM E 1527-00 radii typically used for Phase I Environmental Site Assessments. The report produced by EDR was examined and relevant spills and leaking UST (LTanks) sites are within a quarter mile of the site are provided in Table 1 below. A complete electronic copy of the report will be provided upon request.

## **2.2 Geology**

A geotechnical investigation was performed in 2002 by Site Blauvelt Engineers for the NYCEDC. Per the August 2002 Geotechnical Report, the subsurface soils at the site mainly consist of manmade fill, hydraulic fill, sand, silt and silty sand/sandy silt. The manmade fill, encountered at depths from 5 to 40 feet below ground surface (bgs) consists of silt and/or sand mixed with cinder ash, brick fragments, concrete fragments and wood. The hydraulic fill primarily consists of sand and silt, with some fine to coarse gravel and was encountered at approximated depths of 20 to 38.5 feet bgs. Sand was encountered at varying depths between 3 to 29 feet bgs and was characterized as “loose” to “medium dense”. Silt was encountered at varying depths ranging from 28 to 40 feet bgs and was characterized as “very soft” to “firm”. Silty sand/sandy silt was encountered at varying depths from 5 to 40 bgs and was characterized as “very loose/very soft” to “medium dense/stiff”. The Geotechnical Report states that “well-defined soil strata could not be identified across the project site. Especially in shallower borings it was difficult to distinguish between hydraulic fill and natural soil deposits.” Bedrock was not encountered.

### **3.0 SAMPLING ACTIVITIES**

HDR and its subconsultant, Aquifer Drilling and Testing, Inc. (ADT), performed a groundwater investigation in July 2007. Field sampling activities were conducted over three days from July 16, 2007 through July 18, 2007. Six (6) groundwater samples (one per installed well) were obtained from the six temporary wells installed in the general areas where dewatering will occur to characterize the groundwater condition. Figure 3 depicts the final sampling locations and includes some modifications due to field conditions that did not allow access to the originally proposed sampling locations. Prior to installation of the temporary monitoring wells, HDR's subconsultant, Naeva Geophysics, Inc., performed a geophysical investigation to search and mark out detectable subsurface utilities within a 10-foot radius of the temporary well locations.

In accordance with the final Work Plan, the groundwater samples were analyzed for the parameters included in Attachment A to this Report.

Results of the investigation are included in Section 4.0.

#### **3.1 Groundwater Sampling**

A total of six (6) shallow temporary groundwater monitoring wells (TMW-1 through TMW-6) were installed on July 16, 2007 through July 18, 2007 to a depth of 11 feet to 15 feet below the ground surface with the lower 10 feet screened, and then developed. The groundwater monitoring wells were purged and a single sample was obtained from each well. Prior to purging the monitoring wells, the depth to groundwater was measured using an oil/water interface probe. During purging, but before the collection of groundwater samples, salinity, pH, conductivity, turbidity, and temperature measurements were collected. Free product was not encountered in the groundwater monitoring wells. Once sampled, the monitoring wells were removed and the site was restored to conditions prior to well construction.

Field notes obtained during the groundwater sampling activities can be found in Attachment B of this Report.

#### 4.0 ANALYTICAL RESULTS

Groundwater samples were shipped to HDR's Laboratory Subcontractor, Hampton Clarke-Veritech, for analysis. The groundwater samples were analyzed for the parameters listed on the "NYSDEC Region 2 Dewatering Projects Sampling Information" sheet for discharge to a storm sewer, as well as the parameters required by the New York City Department of Environmental Protection (NYCDEP) for discharge to a sanitary sewer. The lists of these parameters are provided in Attachment A of this Report.

The analytical results are provided in Table 2 below.

Per the NYSDEC's guidance, the groundwater analytical results were compared to the NYSDEC Surface Water Quality Standards provided in Part 703.5 based on a surface water classification of I (Secondary Contact, Fishing) for the Upper New York Harbor. Exceedance of the Part 703.5 Standard for mercury was detected in one (TMW-3) of the six groundwater samples. Exceedances of the Part 703.5 Standards for lead and nickel were detected in all six groundwater samples obtained. Exceedance of the Part 703.5 Standard for copper were detected in five (TMW-2 through TMW-6) of the six groundwater samples obtained. Exceedance of the Part 703.5 Standard for zinc was detected in four (TMW-2 through TMW-4 and TMW-6) of the six groundwater samples.

The groundwater analytical results were compared also compared to the NYCDEP's limitations for effluent to sanitary or combined sewers. Exceedance of the NYCDEP's limitations for effluent for mercury was detected in two (TMW-3 and TMW-4) of the six groundwater samples. Exceedance of the NYCDEP's limitations for effluent for cadmium was detected in two (TMW-2 and TMW-3) of the six groundwater samples. Exceedances of the NYCDEP's limitations for effluent for lead and nickel were detected in all six groundwater samples obtained. Exceedance of the NYCDEP's limitations for effluent for copper were detected in five (TMW-2 through TMW-6) of the six groundwater samples obtained. Exceedance of the NYCDEP's limitations for effluent for zinc was detected in four (TMW-2 through TMW-4 and TMW-6) of the six groundwater samples. Slight exceedance of the NYCDEP's limitations for effluent for

**Table 2  
Analytical Results  
July 2007 Groundwater Sampling  
South Brooklyn Marine Terminal**

pH was detected in two (IMW-3 and IMW-6) of the six groundwater samples. Exceedance of the NYCDEP's limitations for effluent for Total Suspended Solids (TSS) was detected in four (IMW-1 through IMW-4) of the six groundwater samples

## **5.0 CONCLUSION**

The elevated metals concentrations detected in the groundwater samples are suspected to be primarily due to the high turbidity in the groundwater samples. Therefore, since the groundwater to be removed from the site during construction will be allowed to settle in settling tanks prior to discharging into the storm system, the turbidity, and therefore the concentration of TSS and metals in the groundwater, can be expected to be significantly lower to the concentrations reported in Table 2 and to be in compliance with the Part 703.5 Standards and the NYCDEP's limitations for effluent to sanitary or combined sewers.

#### NOTES

- Samples are to be collected after development of the well by a licensed well driller duly registered in accordance with Section 15-1525 of the Environmental Conservation Law of the State of New York
- Samples must be analyzed using the EPA method listed above for each parameter. If another method is used, the Department will not accept the results.
- All analysis must be performed by a NYS Department of Health certified laboratory
- The Method Detection Limit (MDL) is the level at which the analytical procedure referenced is capable of determining with a 99% probability that the substance is present. This value is determined in distilled water with no interfering substances present
- When collecting samples, it is expected that the temporary discharge will be contained on site and will not cause or contribute to a contravention of water quality standards.
- The department may require sampling of additional parameters if the proposed dewatering site is suspected of being contaminated

06/07/2007

NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION  
BUREAU OF WASTEWATER TREATMENT

LIMITATIONS FOR EFFLUENT TO SANITARY OR COMBINED SEWERS

| Parameter <sup>1</sup>          | Daily Limit      | Units    | Sample Type   | Monthly Limit |

| Total Suspended Solids (TSS)    | 350 <sup>4</sup> | mg/l     | Instantaneous | ---           |
| CBOD <sup>5</sup>               | ---              | ---      | Composite     | ---           |
| Chloride <sup>5</sup>           | ---              | ---      | Instantaneous | ---           |
| Total Nitrogen <sup>5</sup>     | ---              | ---      | Composite     | ---           |
| Total Solids <sup>5</sup>       | ---              | ---      | Instantaneous | ---           |
| Other                           |                  |          |               |               |

- 1 All handling and preservation of collected samples and laboratory analyses of samples shall be performed in accordance with 40 C.F.R. pt 136. If 40 C.F.R. pt 136 does not cover the pollutant in question, the handling, preservation, and analysis must be performed in accordance with the latest edition of "Standard Methods for the Examination of Water and Wastewater." All analyses shall be performed using a detection level less than the lowest applicable regulatory discharge limit. If a parameter does not have a limit, then the detection level is defined as the least of the Practical Quantitation Limits identified in NYSDEC's Analytical Detectability and Quantitation Guidelines for Selected Environmental Parameters, December 1988.
- 2 Analysis for *non-polar materials* must be done by EPA method 1664 Rev. A. Non-Polar Material shall mean that portion of the oil and grease that is not eliminated from a solution containing N-Hexane, or any other extraction solvent the EPA shall prescribe, by silica gel absorption.
- 3 Analysis for PCB-s is required if *both* conditions listed below are met:  
1) if proposed discharge  $\geq 10,000$  gpd;  
2) if duration of a discharge > 10 days.  
Analysis for PCB-s must be done by EPA method 608 with MDI  $\leq 65$  ppt. PCB's (total) is the sum of PCB-1242 (Arochlor 1242), PCB-1254 (Arochlor 1254), PCB-1221 (Arochlor 1221), PCB-1232 (Arochlor 1232), PCB-1248 (Arochlor 1248), PCB-1260 (Arochlor 1260) and PCB-1016 (Arochlor 1016).
- 4 For discharge  $\geq 10,000$  gpd, the TSS limit is 350 mg/l. For discharge < 10,000gpd, the limit is determined on a case by case basis.
- 5 Analysis for Carbonaceous Biochemical Oxygen Demand (CBOD), Chloride, Total Solids and Total Nitrogen are required if proposed discharge  $\geq 10,000$  gpd.

1700 HDR offsite

Tuesday 7/17/07

725 onsite spoke w/ NYPD, no approval

840 drillers onsite, spoke with JF, NS

940 TMW-5 develop, purge, sample, on to TMW-1

1040 TMW-1, moved cars, develop, purged, sample led  
 SWL - 7.64, slow sampling water intermittent

1320 completed sampling @ TMW-1, Dallas eating non  
 -grant / close note, find NYPD again

1350 @ TMW-4 develop, purge 1400 sampling also SWL 9.96'

... See next sheet SN notes

7/17/07

900 ADT (Jeremy and Bernia) arrive on site.

920 Begin setting up @ TMW-4

observed soils (through drill cuttings)

|        |                                                                                               |
|--------|-----------------------------------------------------------------------------------------------|
| 0-5'   | : Asphalt; 3/4" gravel (binder), br. dry sandy silt, chlorine odor w/PID                      |
| 5-10'  | : Some sandy silt w/ little gravel, dk. br., damp, low PID 5-125 ppm                          |
| 10-15' | : Silty clay, br. - red dy br., wet, trace gravel and organics, no observed odor, PID 0-2 ppm |
|        | : slight chlorine odor quickly.                                                               |

950 TMW-4 complete. GW @ 10' bgs. Screen 5-15' bgs

Begin @ TMW-6

Observed Soils (through drill cuttings)

|        |                                                                                      |
|--------|--------------------------------------------------------------------------------------|
| 0-5'   | : Asphalt, 3/4" gravel, sandy silt, red dy br., dry, mild chlorine odor, PID 0-9 ppm |
|        | → Trace fill and organics, some pebbles                                              |
| 5-10'  | : Silty sand, blk., mild odor, PID up to 72 ppm                                      |
|        | → Trace fill (brick, glass, etc), organics and pebbles                               |
| 10-15' | : refusal @ 11' bgs                                                                  |

@ both TMW-4 and TMW-6, hit some hardened material 2-3' bgs w/ minor auger refusal. Able to continue boring thro @ both locations.

GW @ TMW-6 @ 8.2' bgs, set well screen 1-11' bgs.

- 1130 Begin removing well and grouting hole @ TMW-<sup>3</sup>? (near Infinity cars)  
GW comes out of hole w/ some soil left. Leave hole to "settle"
- 1145 Begin removing well and grouting hole @ TMW-<sup>5</sup>? (near Nissan cars).  
cuttings do not fill hole, GW still visible. Drillers attempt to bridge w/ dry portland cement. Bridging successful and apply blacktop.
- 1200 Return to TMW @ Infinity cars saturated soils (toothpaste consistency)  
settled ~ 3" bgs. Drillers mix in dry Portland cement. Will leave overnight and return to tomorrow for asphalt patching.
- 1215 Went to NYPD impound lot. Told no authorization to drill has arrived, therefore cannot enter site.
- 1300 Drillers take lunch break.
- 1330 Backfill and asphalt patch TMW-1 (@ used car lot)
- 1430 Check w/ NYPD impound lot. Still no access
- 1445 Meet S. Quarry @ TMW-4 to assist w/ sampling. Then pull well and back-fill.
- 1539 Go to used car lot, speak to owner regarding drum
- 1600 Go to NYPD lot, speak to officers regarding site access.
- 1605 Call Hampton Clark to schedule pick up of cutters. Franz confirms Nyack pick up for 930 am. Leave for day.

Wednesday 7/18/07

- 515 left Bushen Heavy Rain 75°F  
630 left Nyack - Flooding/Traffic/Accidents, etc.  
1100 Arrive onsite, @ Tmw-6 to sample  
- meet NYPD  
1115 developing, purging, sampling, mud then drying up  
1215 over to Tmw-3  
1230 Portland/Concrete hard, lay asphalt  
1245 laseled drum @ Tmw-1, left for transport  
1315 NS called verbal for NYPD  
1345 @ Tmw-2 NYPD approval, ID check  
1400 on Tmw-2 location
- |            |       |           |                             |
|------------|-------|-----------|-----------------------------|
|            | 0-5   | > 50 rpm  | fill                        |
| SWL = 9.47 | 5-10  | > 50 rpm  | sand silty material         |
|            | 10-15 | > 100 rpm | mudgy silty/clay trace clay |
- 1500 developed, purged, sampling @ location  
1545 completed sampling  
1600 drillers close hole  
1615 - Soil samples from drum (left @ Nyack Rig)  
- called JF (EAC), NS - drum @ Tmw-1  
- fld Ritchie (owner) near Tmw-1  
1620 - Samples picked up to Vortech Barber Coe  
1630 - signed off for drillers  
- letting all owners know done work (left cards)  
1645 HDR offsite
